WELCOME TO THE IronFX MULTI-ASSET TRADER USER MANUAL

In this guide, you'll find instructions on how to use the features and tools in IronFX Multi-Asset Trader. If you're a beginner, you can walk step-by-step through how to set up and use all of the IronFX Multi-Asset Trader features. If you've been trading for a while, we've included a detailed table of contents so you can quickly reference how to use a specific section or tool in IronFX Multi-Asset Trader.

BEFORE YOU USE IronFX MULTI-ASSET TRADER…

You should have a basic understanding of the forex market. If you are new to trading forex, IRONFX offers a variety of free resources to help you learn about the market and how you can reach your personal trading goals. Visit IRONFX's website to find out more.

TIPS FOR USING THIS MANUAL

As you browse these sections, you'll notice that our screenshots of the interface highlight sections of the graphic to point out tools, menus, features and other options.
IRONFX uses the following notes to emphasise important information about IronFX Multi-Asset Trader.

Describes information on the action of a tool or feature in IronFX Multi-Asset Trader. When you see this symbol, it provides a larger context for information and procedures.

Provides hints, tricks and shortcuts that may help you as you place and monitor trades in IronFX Multi-Asset Trader.

Alerts you of critical information you need to know while you perform a particular procedure.

SECTION 1: EXPLORING IRONFX MULTI-ASSET TRADER

Once logged in, you'll see the IronFX Multi-Asset Trader workspace. While it may be a bit overwhelming at first, don't worry. In this section, you'll learn about the different windows in IronFX Multi-Asset Trader and how you can use them to trade.

LOGGING IN TO IRONFX MULTI-ASSET TRADER

After you download and install IronFX Multi-Asset Trader, you can open the IronFX Multi_Asset TraderLogin window by clicking the desktop icon on your computer. You can also open it by clicking the Start menu on your computer, clicking the Global Forex Trading folder and clicking IronFX Multi-Asset Trader.

To login, enter your login and password in the Login window. If you're using:

- A practice account, choose Demo System.
- A live account, choose Live System.

If the Connection Options window appears with the Login, you'll need to enter the necessary URL:

- Live system:
  http://live.mat.ironfx.com/naming.ior
- Demo system:
  http://demo.mat.ironfx.com/naming.ior

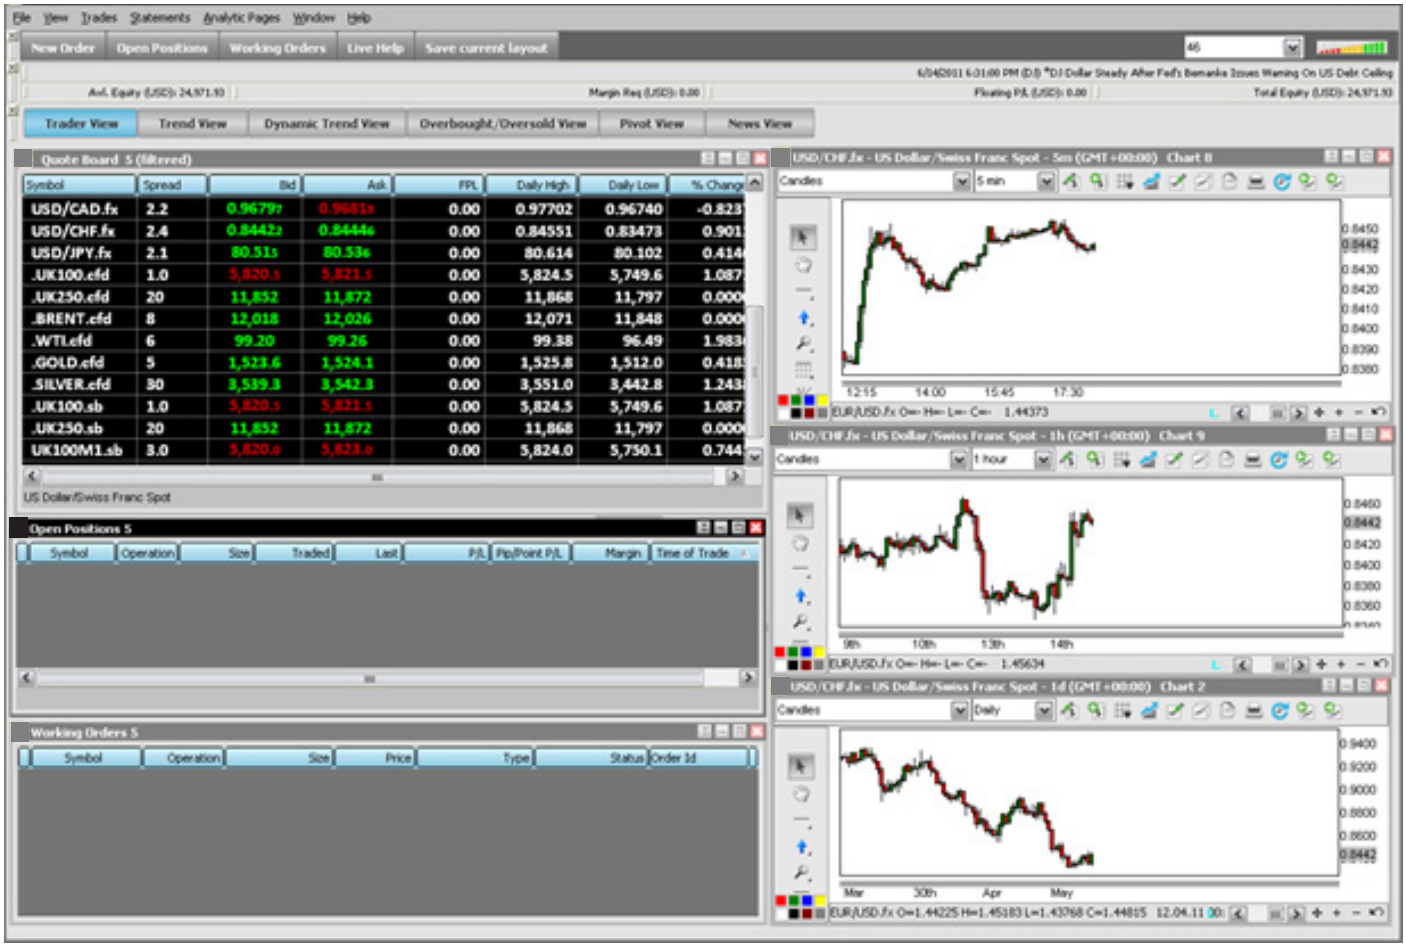
Then click **OK** to continue.

If you are using IronFX Multi-Asset Trader on a shared computer, you can clear your login information by clicking Connection Settings and checking the Don't Save Login checkbox in the Connection Options window.

IRONFX sends login and password information by email when you open an account. If you don't have an account, you can visit our website to sign up for a risk-free practice account.
IronFX Multi-Asset Trader will lock you out after entering an incorrect password 10 times.
If you forget your password, you can reset it. To find out how, start a live text chat at IronFXuk.com.
To change your language settings, please see the Specifying the Application Language in IronFX Multi-Asset Trader.

VIEWING THE IRONFX MULTI-ASSET TRADER WORKSPACE

The IronFX Multi-Asset Trader Workspace is the area where you can display and arrange charts, windows and other tools to help you trade.



If your version of IronFX Multi-Asset Trader does not look similar to this, click Layouts on the File menu. When the drop-down menu appears, make sure there is a checkmark next to FX_CFD UK Layout if you are trading on a forex and/or contract for difference (CFD) account or SB_UK Layout if you are trading on a spread bets account.
If neither of these is in the drop-down menu, see Appendix A: Troubleshooting.

If you have FX options associated with your account, you can apply one of two layouts to IronFX Multi-Asset Trader. For more information, see Displaying a Layout.

THE IRONFX MULTI-ASSET TRADER MENU BAR

At the top of the main window, you'll see the IronFX Multi-Asset Trader menu bar. You can use options in the seven menus to manage windows and other tools while you trade.

File - View menu options for configuring IronFX Multi-Asset Trader settings. You can also relogin or exit IronFX Multi-Asset Trader from here.

View - Select menu options that display toolbars and windows, such as the Quote Board, Open Positions, News and others that you'll use while trading.

Trades - Open the New Order window and Direct Deal tickets. You can also display the Close Working Orders and Open Positions window.

Statements - View the Report window. For more information on printing statements, see Section 5: Displaying Statements and Viewing Analytics for more information.

Analytic Pages - Access the IRONFX economic calendar and view daily commentary from IRONFX and other providers.

Window - Arrange windows in the IronFX Multi-Asset Trader workspace or display specific windows.

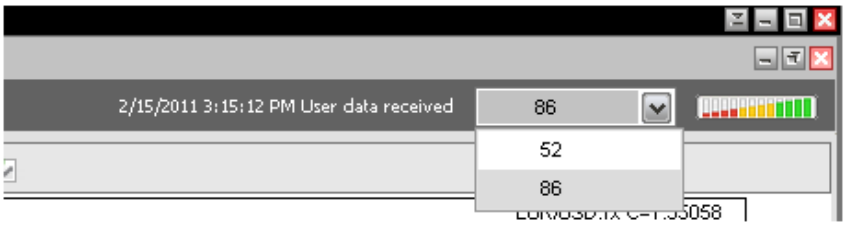
Help - Access IronFX Multi-Asset Trader online help, IRONFX Live Chat, and other resources.

QUICK ACCESS TOOLBAR

The Quick Access toolbar appears below the menu bar when you first open IronFX Multi-Asset Trader. This toolbar contains some of the most commonly used tools in IronFX Multi-Asset Trader.

You can display up to eight different menu buttons in the Quick Access toolbar. You can configure which ones appear in this toolbar; See Selecting Tools in the Quick Access Toolbar for more information.
If you have more than one account, you can use the **Account** drop-down menu to switch between accounts while you are working in IronFX Multi-Asset Trader.

The Quick Access toolbar also displays the strength of the internet connection to IronFX Multi-Asset Trader servers. Green bars mean you have full connectivity. No bars appear when IronFX Multi-Asset Trader is offline.



The Quick Access toolbar also displays the strength of the internet connection to IronFX Multi-Asset Trader servers. Green bars mean you have full connectivity. No bars appear when IronFX Multi-Asset Trader is offline

IronFX Global is authorised and regulated by

Member of Eurex Exchange

You can also display how long you have been logged into IronFX Multi-Asset Trader by clicking on the Quick Access toolbar and selecting Show Running Time from the drop-down menu.

THE STATUS BAR

The Status Bar appears at the top and bottom of the IronFX Multi-Asset Trader workspace. You can view real-time account information in this bar.

Available Equity - The amount of money you have available to trade. IronFX Multi-Asset Trader calculates this as your Total Equity minus the Margin Requirement on your current open positions.

Margin Req. - The amount of money required for maintaining the current open positions. IronFX Multi-Asset Trader calculates margin as Margin = Volume * Last Price * Account Margin Setting.

Total Equity - The gross total of your account, including unrealised profit/loss and floating P/L.

Unrealised P/L (Profit/Loss) - The total value of unsettled profits and losses. When a position is closed in a net-based account, it takes two days for your profits or losses to be added to your cash balance. In the meantime, the values remain in your unrealised P/L.

Cash - The current value of your account. This appears in the base currency of your account and includes

Floating P/L - The potential profit or loss you would make if your active positions were closed at the current market price.

You can change what information appears in the Status bar.
See Selecting Tools in the Status Bar.

WORKSPACE LIST

IronFX Multi-Asset Trader gives you the ability to create separate workspaces for the instruments, charts, time frames and news you trade the most. The Workspace List provides quick access to each of your workspaces.

This appears below the Status Bar when you first open IronFX Multi-Asset Trader. If you accidentally close it, you can click **Workspace List** in the **View** menu to open it again.

Your workspace list can be docked vertically, horizontally or it can appear as a separate window.

You can create and customise workspaces as you need them. If you select the standard layout, however, you will see six workspaces.

- **Trader View** – This is the default workspace that appears when you open IronFX Multi-Asset Trader. It consists of the Quote Board, the Open Positions window, the Working Orders window, and three linked charts.
- **Trend View** – The primary feature of this workspace are two charts which are pre-configured to show several slow moving averages (SMA).
- **Dynamic Trend View** - The primary feature of this workspace are two charts which are pre-configured to show two sets of Bollinger Bands.
- **Overbought/Oversold View** – The primary feature of this workspace is the single chart which displays three subgraphs below the chart. These are pre-configured to show Slow Stochastics, the Relative Strength Index (RSI) and Commodity Channel Index (CCI).
- **Pivot View** – The primary feature of this workspace is the single chart which displays the pivot points, resistance and support levels and midpoints for the selected instrument.
- **News View** – The primary feature of this workspace is the News window. Here, you can view headlines from your news subscriptions and RSS feeds.

If you right-click in the **Workspace List**, you can view a drop-down menu that displays menu options for adding the **Window List** to the Workspace List window. The two lists will appear in the same window side by side. To hide the Window List, right-click and deselect S**how Windows List.**

You can learn more about modifying existing or adding new workspaces in Modifying the IronFX Multi-Asset Trader Workspace.

WINDOW LIST

As you trade in IronFX Multi-Asset Trader, you may have multiple windows open across several workspaces. The Window List provides quick access to all of your open windows.

Open the Window List at any time by clicking **Window List** on the **View** menu.

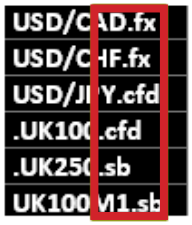
If you right-click in the Window List, you can view a drop-down menu that displays menu options for adding the Workspace List to the Window List window. The two lists will appear in the same window side by side. To hide the Workspace List, right-click and deselect **Show Workspace List.**

Your Window List can be docked vertically, horizontally or it can appear as a separate window. See Displaying Floating and Dockable Windows for more information.

If the Quote Board is not displayed for some reason, click **Quote Board** on the **View** menu.

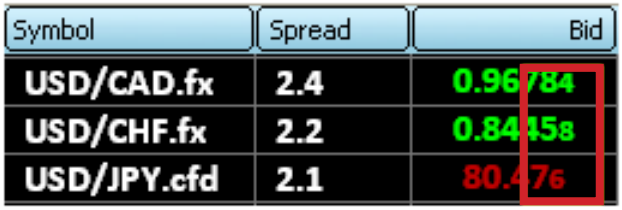
IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

The Quote Board displays file extensions after the symbol so you can verify which kind of market you are trading.

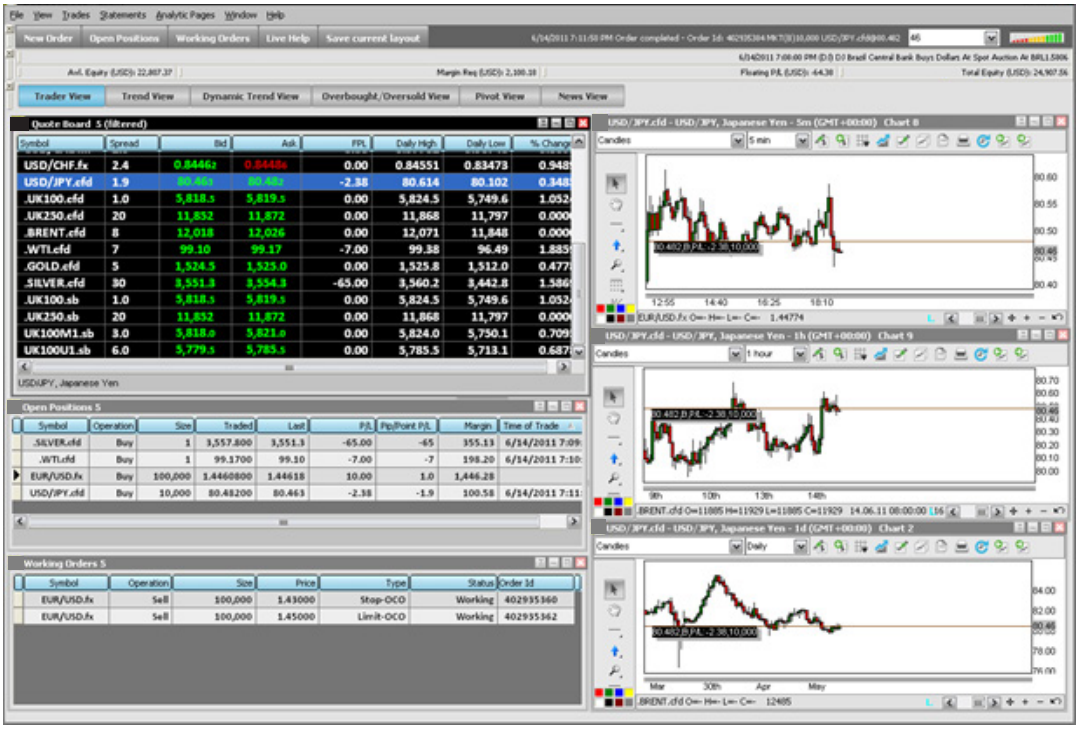


- The .fx indicates that the instrument is a currency pair for forex trading.
- The .cfd indicates that the instrument is for contract-for-difference (CFD) trading.
- The .sb indicates that the instrument is for spread bet trading.

Currency pairs in the Quote Board will have an additional, smaller decimal after the pip. This called the fractional pip and it represents tenths of a pip.

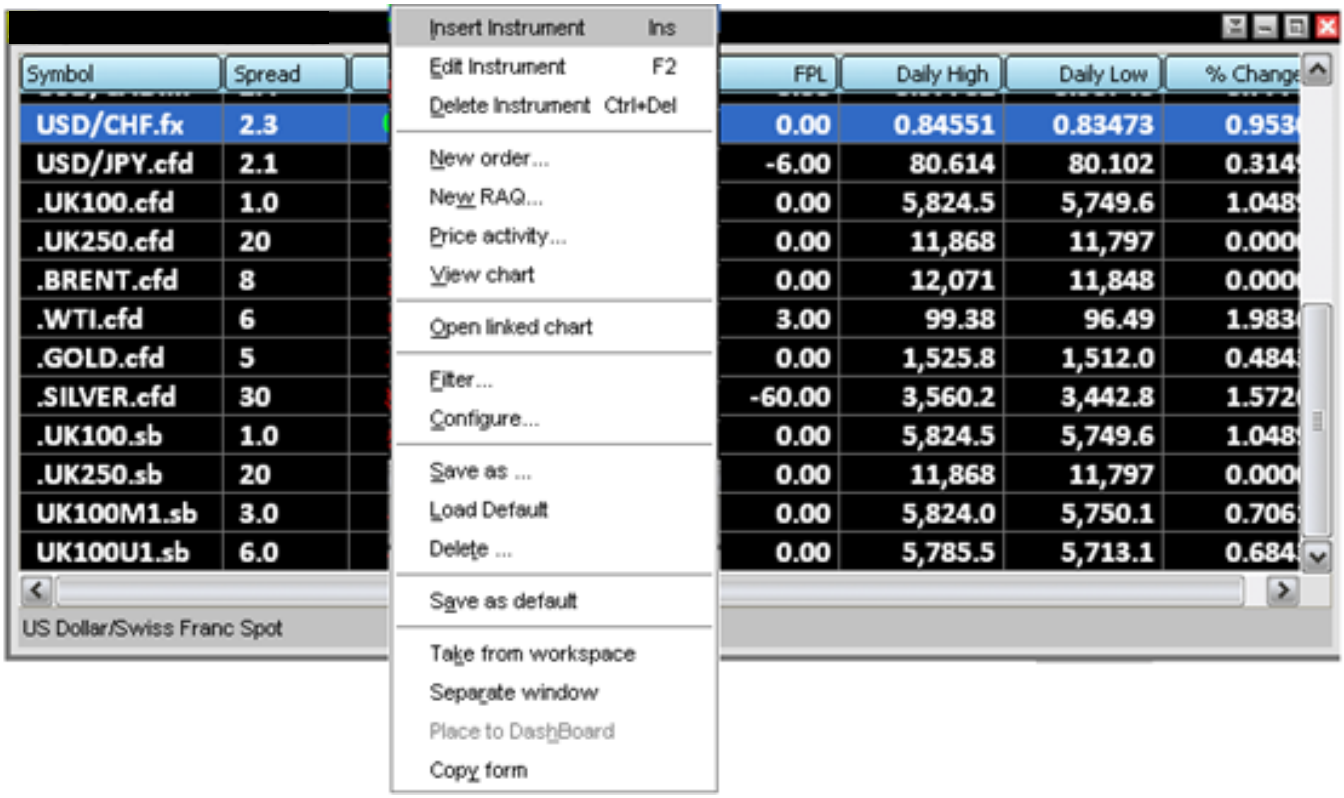


If you are using FX_CFD UK Layout for trading forex and/or CFDs or SB_UK Layout for trading spread bets, you can click a symbol in the Quote Board and the linked charts on the right automatically update to show the price movements of the selected instrument.



When you double-click on a symbol, the charts update and a Direct Deal ticket appears.

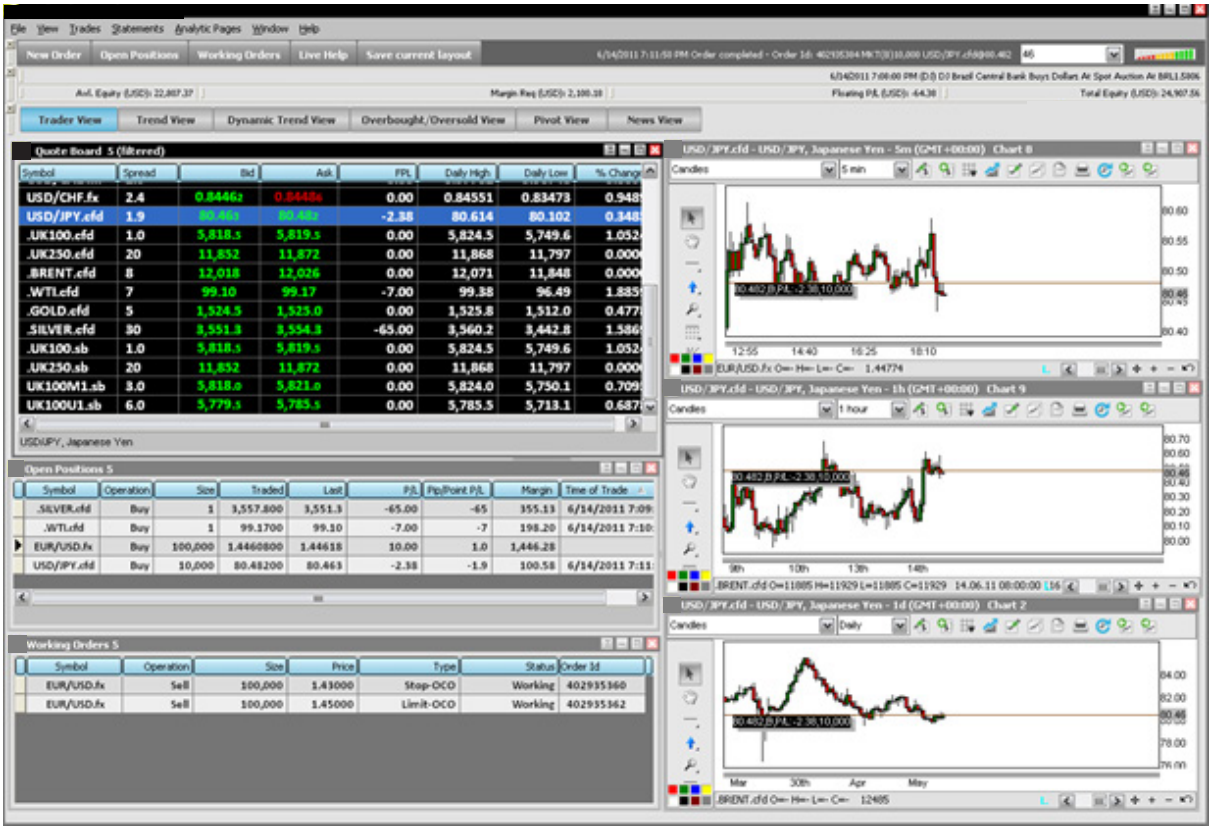
If you right-click on a symbol, you can also view a drop-down menu. You can learn more about these menu options in other sections.



You can modify which instruments appear in the Quote Board as well as customise the order of the columns and other aspects of the Quote Board; see Configuring the Quote Board and Managing Instruments in the Quote Board for more information.

CHART WINDOWS

Charts plot the real-time prices of an instrument on a graph and provide a snapshot of market movements over a particular period of time.



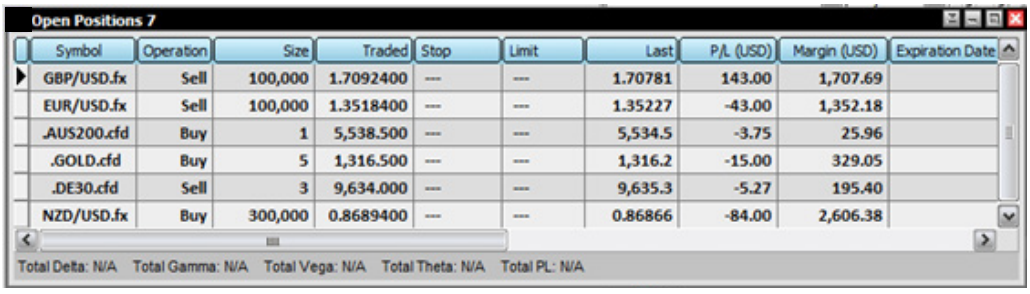
If you are using FX_CFD UK Layout or SB_UK Layout, the charts that appear in the Trader View when you first open IronFX Multi-Asset Trader are linked charts. They're connected to the Quote Board and update when you select an instrument in the Quote Board. You can also open the regular chart window.

If you accidentally close a linked chart, you can re-open it by right-clicking on the instrument that you want in the Quote Board and selecting Open Linked Chart from the drop-down menu. You will need to reconfigure the chart's type, time frame, and appearance.

You can learn more about charts and chart customisation in Section 3: Using the Charting Tools.

THE OPEN POSITIONS WINDOW

When you place an order and market moves trigger it, your order becomes an open position and appears in the Open Positions window.



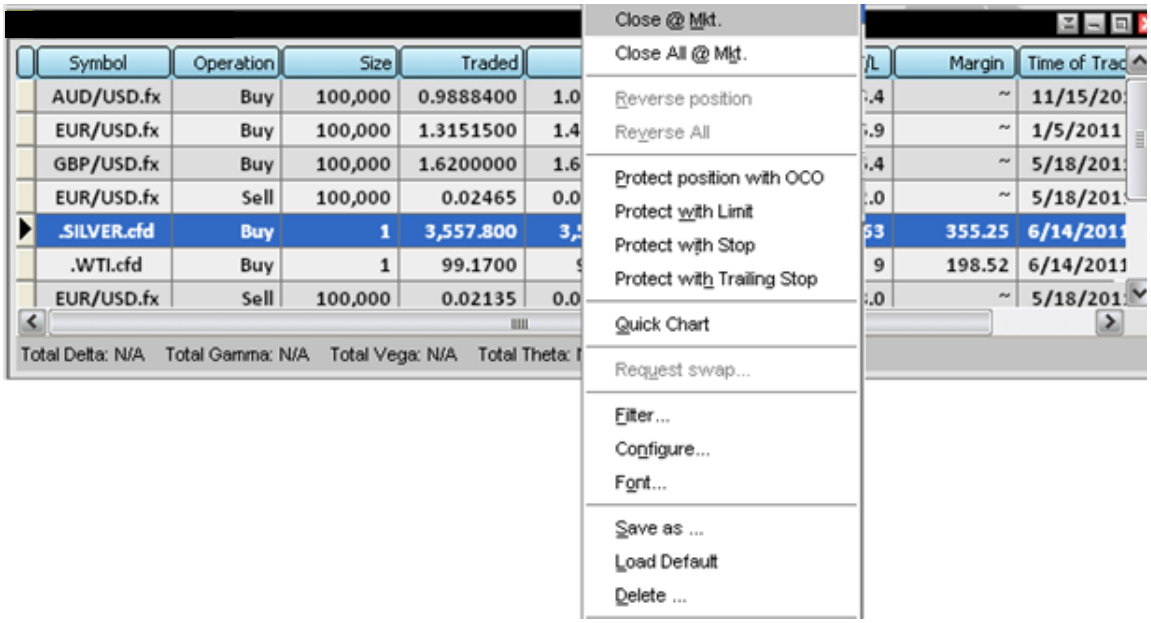
Open Positions 7
Symbol Operation Size Traded Stop Limit Last P/L (USD) Margin (USD) Expiration Date
GBP/USD.fx Sell 100,000 1.7092400 --- --- 1.70781 143.00 1,707.69
EUR/USD.fx Sell 100,000 1.3518400 --- --- 1.35227 -43.00 1,352.18
.AUS200.cfd Buy 1 5,538.500 --- --- 5,534.5 -3.75 25.96
.GOLD.cfd Buy 5 1,316.500 --- --- 1,316.2 -15.00 329.05
.DE30.cfd Sell 3 9,634.000 --- --- 9,635.3 -5.27 195.40
NZD/USD.fx Buy 300,000 0.8689400 --- --- 0.86866 -84.00 2,606.38
Total Delta: N/A Total Gamma: N/A Total Vega: N/A Total Theta: N/A Total PL: N/A

The Open Positions window displays details, such as the cost, profit/loss, margin, stop and limit levels of attached orders and other information, about your position.

You can also view the delta, gamma and other Greeks at the bottom of the window. If you have trades in more than one instrument, you'll need to filter the Open Positions window. To do this, right-click in the window and select Filter. In the Filter window, check mark Use Filter and select the one instrument you want from the list.

When you have a position-based account, the Open Positions window lists each position in the same instrument separately. When you have a net-based account, the Open Positions window combines all positions in the same instrument in one position. If you have more than one account type, you may view both position-based and net-based trades in the Open Positions window.

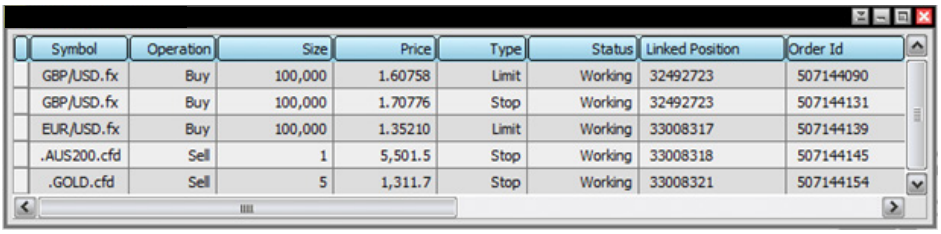
If you right-click on an open position, you can view a drop-down menu with a number of menu options.



You can customise the information that appears in the Open Positions window. See Changing Settings in the Open Positions Window.

WORKING ORDERS

You might enter a stop or limit order to protect an open position or to enter the market. Until the market reaches your specified price, your order is a working order and can be changed in the Working Orders window.



Symbol	Operation	Size	Price	Type	Status	Linked Position	Order Id
GBP/USD.fx	Buy	100,000	1.60758	Limit	Working	32492723	507144090
GBP/USD.fx	Buy	100,000	1.70776	Stop	Working	32492723	507144131
EUR/USD.fx	Buy	100,000	1.35210	Limit	Working	33008317	507144139
.AUS200.cfd	Sell	1	5,501.5	Stop	Working	33008318	507144145
.GOLD.cfd	Sell	5	1,311.7	Stop	Working	33008321	507144154

The Working Orders window displays details, such as type, size, the position the order is linked to and other information about your stops or limits.

Once executed, the order is removed from the Working Orders window and appears in the Open Positions window.

If you right-click on a working order, you can also view a drop-down menu with additional menu options.

You can customise the information that appears in the Working Orders window. See Changing Settings in the Working Orders Window.

THE NEWS WINDOW

The News window receives news items from multiple data feeds and displays the headline and story in real-time. In addition, you can add your own favourite news sources that offer RSS feeds.

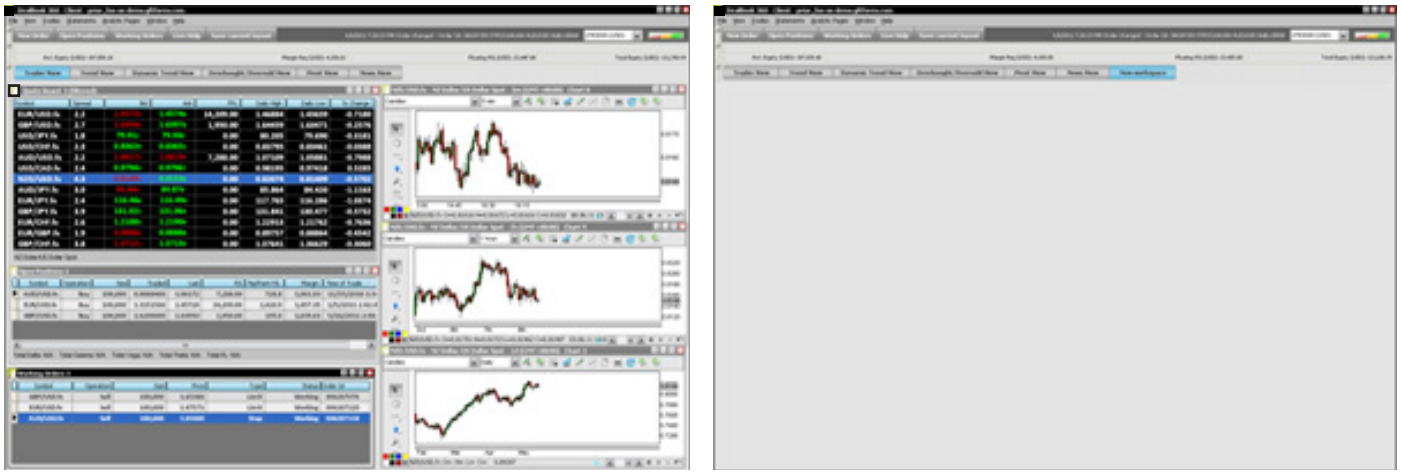
Click on the headline to view the complete news story in the window below the headline section. You can view older headlines and stories by using the scroll bar to scroll down the list

You can add, edit and remove RSS feeds from the News window. See Managing News Feeds on the RSS Feeds Tab.

THE IRONFX MULTI-ASSET TRADER WORKSPACE

The IronFX Multi-Asset Trader Workspace is the area where you can display and arrange charts, windows and other tools to help you trade. When you first open IronFX Multi-Asset Trader, windows are already arranged in several workspaces, but you can open and arrange windows in any workspace to fit your trading style.



The IronFX Multi-Asset Trader workspace in the default layout and the IronFX Multi-Asset Trader workspace without any windows open. Only the Status bar and Quick Access toolbar are visible.

You can create multiple workspaces in IronFX Multi-Asset Trader. When you add a workspace, IronFX Multi-Asset Trader adds a button with that workspace name to the Workspace List.

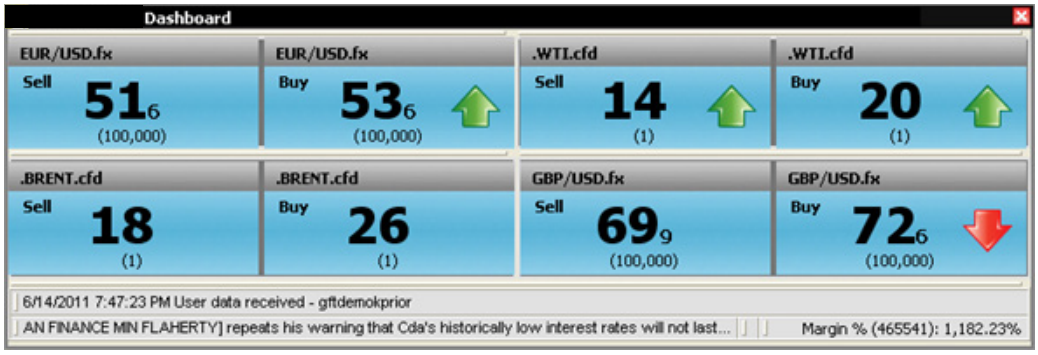
You can click on these buttons to switch between workspaces. The button highlights to show which is displayed. You can also edit or remove workspaces in IronFX Multi-Asset Trader; see Modifying the IronFX Multi-Asset Trader Workspace for more information.

At the end of your IronFX Multi-Asset Trader session, you will be asked if you want to save the current layout. If you click Yes, IronFX Multi-Asset Trader will save the layout of all workspaces and automatically display them the next time you log in.

You can also save and name multiple layout files and load them into IronFX Multi-Asset Trader. See Managing Layouts for more information.

THE DASHBOARD

When you want to monitor market moves or make trades quickly, you can use the Dashboard.
This displays a number of IronFX Multi-Asset Trader tools and features in a separate window.
That way, you can minimise IronFX Multi-Asset Trader and monitor and place trades from the Dashboard.



Click **Dashboard** from the **View** menu to display the Dashboard window.

When you open the Dashboard after launching IronFX Multi-Asset Trader for the first time, you'll see Quote Tickers, which display current prices and market direction. Like Direct Deal tickets, you can enter a sell or buy order by clicking on the Quote Tickers.

- Click **Sell** to sell at the listed price.
- Click **Buy** to buy at the listed price.

Like the Quote Board, the Dashboard displays currency pairs with an additional decimal after the pip. This is a fractional pip and it represents tenths of a pip.

The Dashboard also displays the last system status message, the latest headline, and your current margin.

You can customise the Dashboard window by right-clicking in the window and selecting menu options from the drop-down menu. You can specify which instruments that you want to monitor as well as add items, such as the Quote Board, Open Positions, Working Orders and other tools. You can also open separate windows, such as New Order, Report, and others, from the Dashboard without maximising the IronFX Multi-Asset Trader main window.

For more information on adding tools to the Dashboard, see Adding Tools to the Dashboard.

MANAGING IRONFX MULTI-ASSET TRADER WINDOWS

In these menus, several menu options appear that can help you organise your working place.

This minimises the main window so only the title bar shows. This is called a roll up.

This minimises the whole window so that only a portion of the title bar appears in the lower left corner of the window. You need to click on the IronFX Multi-Asset Trader icon in your status tray to redisplay IronFX Multi-Asset Trader.

This maximises the active window so it fits entirely in the IronFX Multi-Asset Trader window.

This changes the full-sized window to a smaller size.

This closes the window. If you click this in the IronFX Multi-Asset Trader main window, you will exit the application.

SECTION 2: OPENING AND MANAGING YOUR TRADES

Now that you're familiar with some of the windows in IronFX Multi-Asset Trader, we'll look at the tools you'll use to place and monitor your trades. This section describes the various order types that are available in IronFX Multi-Asset Trader and the tools you can use to enter the market.

TRADING WITH THE ORDER TYPES IN IRONFX MULTI-ASSET TRADER

When you trade, there will be times when you need to enter the market immediately. Other times, you'll want to carefully plot out a series of orders so you can protect your possible earnings and exit when the market hits a specific price. To do all this, you'll need to use a variety of different order types.

Market - Places a buy or sell order on an instrument at the current market price.

Direct Deal - Enters a buy or sell order at an exact price. When you place a direct deal order, IRONFX fills the order only if that price is still available when the order reaches the IronFX Multi_Asset Trader servers. If the price is no longer available, IronFX Multi-Asset Trader does not fill the order.

Limit - Allows you to specify that a trade must be executed at a specific price or better. Traders typically use limit orders to exit a position in an attempt to capture profits, but limits can also be used to enter a position.

Stop - Allows you to enter or exit the market at a particular price. Traders typically use stop orders to set an exit point for a losing trade, but they can also be used to protect an existing profit.

Order Cancels Order (OCO) - Allows you to set both a stop order and a limit order. When market movements cause either order to be filled, the unfilled order is automatically cancelled.

Parent and Contingents (P&C) - Allows you to set up an entire trade, including entry and exit points as well as risk-management measures, in just one step. When market movements cause the parent order to be executed, the contingent orders become active until one is filled; if the OCO check box is selected, the unfilled order is automatically cancelled.

Trailing Stop Orders - Enters a stop order at a specific number of pips or points away from the current market price. When the market moves with your position, the stop setting automatically changes so that it 'trails' the current price by the number of pips or points that you set. When the market moves against your position, the stop remains set at the last trailing price reached when the market was moving your way. You can use this to protect profits without limiting potential gain.

Scale-Out - Gives you the flexibility to gradually enter or exit a trade in increments by placing multiple Order Cancels Orders of one or more lots, contracts, or stakes.

Close By - Closes out two opposing positions in an identical market by offsetting them against one another. It's a way to close hedged positions without having to pay the spread. Close by orders allow users to close both positions at the open price of one of the positions – it means the P&L on one trade will be zero, and all the P&L of both positions will be applied to the other trade.

There is a difference between orders and positions. All trades are placed as orders. When the price of the order meets the market price, it becomes an actively traded position. You can modify and cancel orders, but you can only close positions.

PLACING DIRECT DEAL ORDERS

Direct deal orders can be placed from two different windows in IronFX Multi-Asset Trader:

- The Direct Deal ticket displays real-time prices and the current market direction of a specific instrument. You can display the Direct Deal ticket by itself or access it from the Quote Board.

Click **Sell** to sell at the listed price. Click **Buy** to buy at the listed price.

- The Quote Tickers in the Dashboard display real-time prices and the current market direction of a specific instrument. You can enter your order by clicking Sell or Buy when the market hits the price you want.

If you are trading currency pairs, the Direct Deal ticket and the Quote Tickers both display the pip value in a larger font than the fractional pip value.

You can open multiple Direct Deal tickets and set them to display a variety of instruments.

PLACING DIRECT DEAL ORDERS FROM THE QUOTE BOARD

If you are monitoring prices from the Quote Board, you can place a direct deal order by double-clicking on the desired instrument. This displays the Direct Deal ticket for that instrument.

PLACING DIRECT DEAL ORDERS FROM THE QUOTE BOARD:

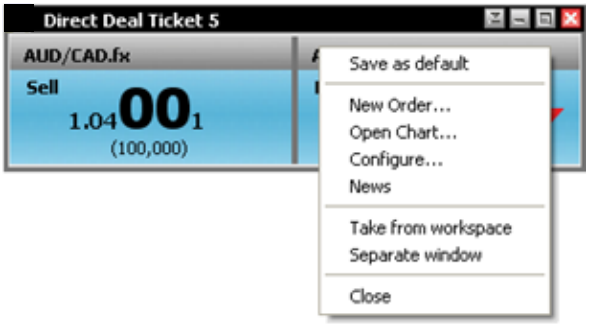
1. In the Quote Board, double-click on the instrument you want.
2. Click Sell or Buy on the Direct Deal ticket.
3. Click Yes to confirm.

You can change the trade size and other details in the Direct Deal ticket before placing an order. See Modifying Direct Deal Ticket Settings and then Placing an Order.

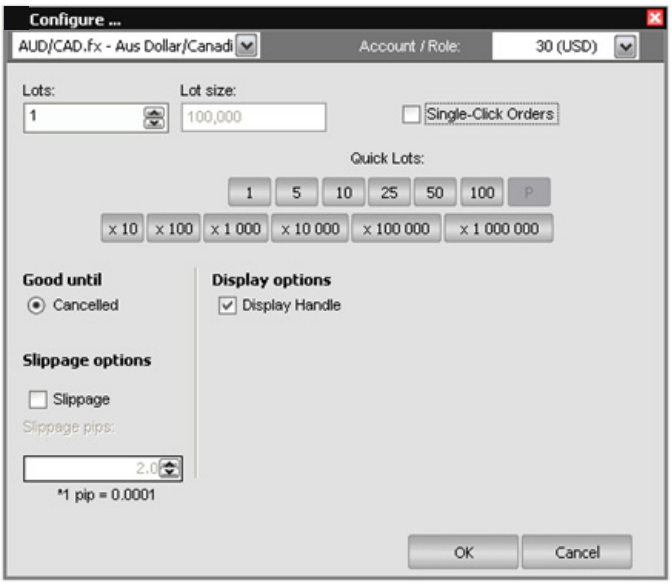
If the Quote Board on your version of IronFX Multi-Asset Trader does not open the Direct Deal tickets, see Configuring the Quote Board for more information.

MODIFYING DIRECT DEAL TICKET SETTINGS AND THEN PLACING AN ORDER

In addition to opening Direct Deal tickets from the Quote Board, you can also display them by clicking **Direct Deal** from the **Trades** menu.



When the ticket opens, it displays the prices for the first instrument offered by IronFX. You'll need to change the ticket settings before you can make a trade by right-clicking on the ticket and selecting Configure... from the drop-down menu. This opens the Configure... window.

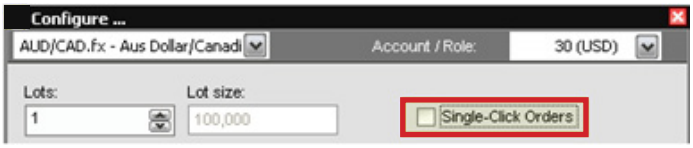


You can use the **Instrument** drop-down menu to change the selected instrument.

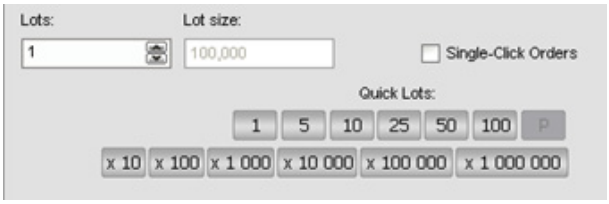
If you have more than one account, you can use the **Account/Role** drop-down menu to select the one you want to use.

If you are switching back and forth to place trades, remember to check the selected account before you place your order. Your accounts use different settings for base currency and other settings. They may also be different account types (position-based or net-based). All of these factors may have an effect on the outcome of your trade.

Click the **Single-click Orders** checkbox if you don't want to confirm every order.



Use the to adjust the size of your trade. In our example, we're trading forex, so the size is in lots. You can also click the Quick Lots or Quick Stake buttons to quickly change the size of your CFD or spread bet order.



You can check the **Display Handle** checkbox to display the whole price of the instrument. If you leave it unchecked, you'll only see the last two numbers for CFDs and spread bets and the last two digits and the fractional pip value for currency pairs.

With **Display Handle** checked.

With **Display Handle** checked.

You can also protect your order by clicking the Slippage checkbox and setting the number of points or pips.

When markets are extremely volatile, the price of an instrument may jump or drop in a moment. This is called slippage. When this happens, IronFX Multi-Asset Trader won't fill your direct deal order because the price is slightly higher or lower than the original value. When you check the **Slippage** checkbox and set either the pip or fractional pip value in the **Slippage Pips** textbox or the point value in the **Slippage Points** textbox, your direct deal order will be filled if the market price is within the threshold number of pips or points below or above the order price.

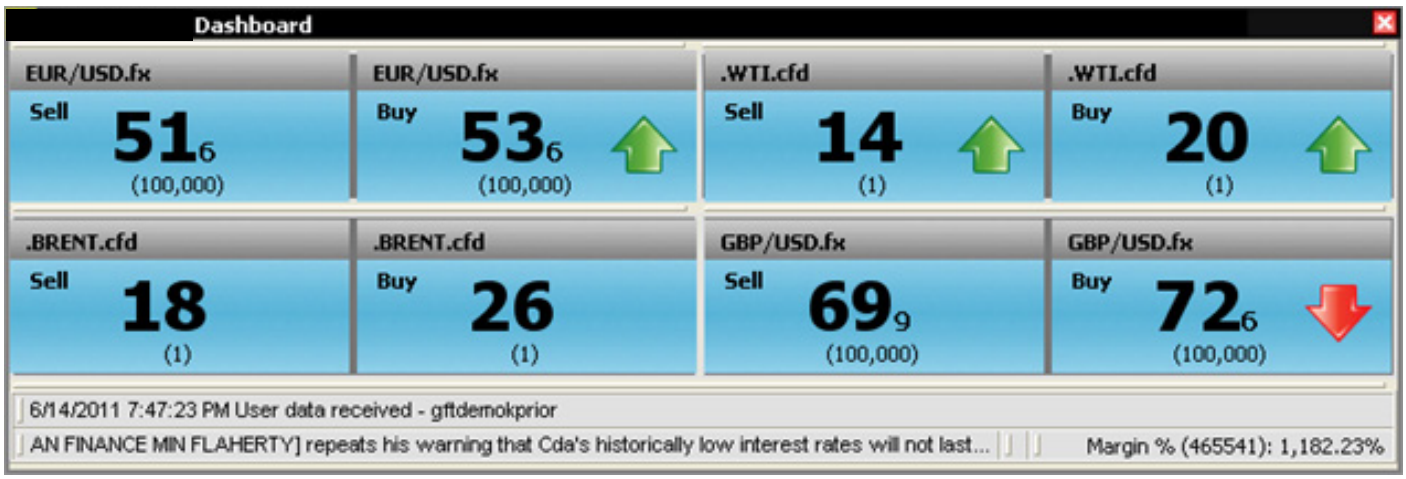
Once set, IronFX Multi-Asset Trader will continue to use these settings when you place an order using that Direct Deal ticket. If you close that Direct Deal ticket and open a new one, you must enter the settings in the Configure window again.

MODIFYING DIRECT DEAL TICKET SETTINGS AND THEN PLACING AN ORDER:

1. Click Direct Deal from the Trades menu.
2. Right-click on the ticket and click Configure…
3. Click and select an instrument from the drop-down menu.
4. If desired, select the account you want from the Account/Role drop-down menu.
5. If desired, click the Single-click Orders checkbox.
6. Use the to adjust the size of your trade, if desired.
   You can also click the buttons in the Quick Lots or Quick Stake section.
7. If desired, click the Slippage checkbox and set the number of pips or points.
   You can also check or uncheck the Display Handle options.
8. Click OK to close the Configure window.
9. Click on the Sell or Buy side of the ticket.
10. If you have not selected Single-click Orders, a confirmation window will appear.
    Click Yes to confirm your order.

PLACING DIRECT DEAL ORDERS FROM THE DASHBOARD

If you are monitoring prices from the Dashboard, you can place a direct deal order using the Quote Tickers.



IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

PLACING DIRECT DEAL ORDERS FROM THE DASHBOARD:

1. In the Dashboard, make sure the Quote Ticker for the instrument you want is displayed.
2. Click on the Sell or Buy side of the ticket. The Confirmation Order window appears.
3. Click Yes to confirm.

Remember, you can click **Dashboard** on the **View** menu to display the Dashboard.

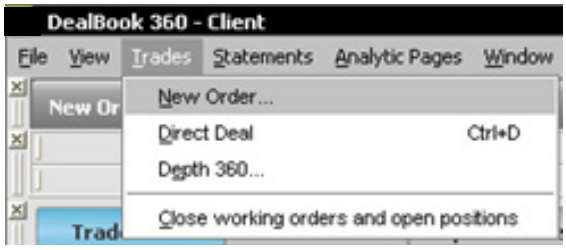
Like the Direct Deal tickets, you can change the ticker settings before you make a trade by right-clicking on the ticker and selecting **Configure**… from the drop-down menu. This opens the Configure… window. You can use the drop-down menu to change the selected instrument as well as the other settings. For more information on settings in the Configure… window, see the Modifying Direct Deal Ticket Settings and then Placing an Order

PLACING ORDERS FROM THE NEW ORDER WINDOW

You will place most of your orders from the New Order window.

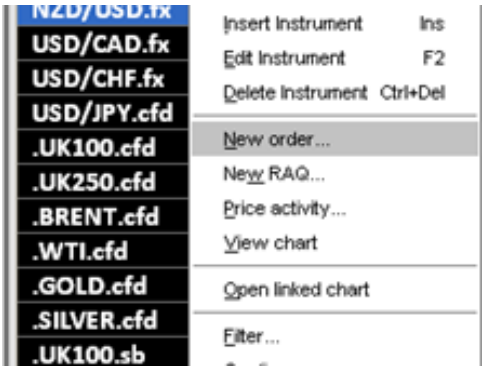
You can open this window from several places in IronFX Multi-Asset Trader.

- You can select **New Order** from the **Trades** menu.



- You can click **New Order** in the Quick Access toolbar.

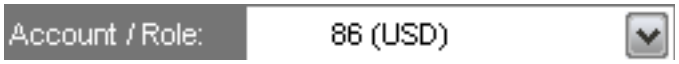
- You can select **New Order**… from the drop-down menu of the Quote Board or Dashboard.



You can specify settings in the New Order window using the following tools:

- You can use the Instrument drop-down menu to change the selected instrument.

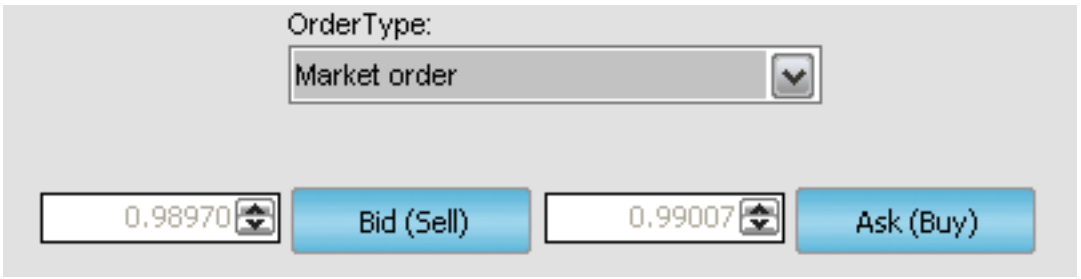
- If you have more than one account, you can use the Account/Role drop-down menu to switch between accounts.



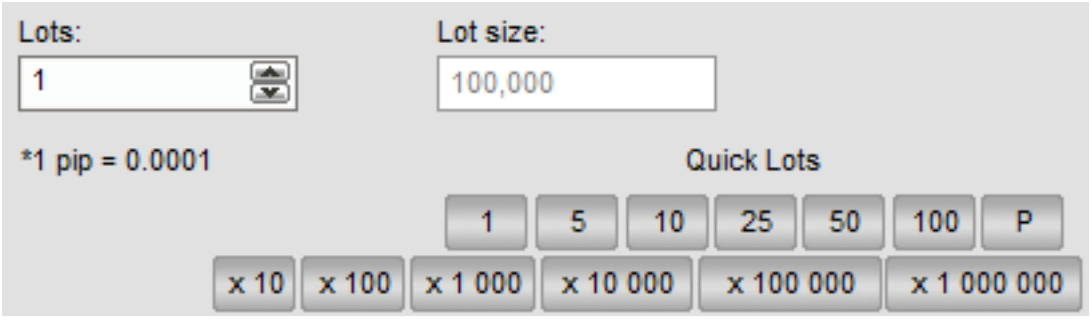
If you are switching back and forth to place trades, check the selected account before you place your order. Your accounts use different settings for trade size or base currency. They may also be different account types (position-based or net-based). All of these factors may have an effect on the outcome of your trade.

- You can view the real-time prices and market direction for the selected instrument.

- You can select the type of order you would like to place with the Order Type drop-down menu. Based on your selection, additional settings become available.

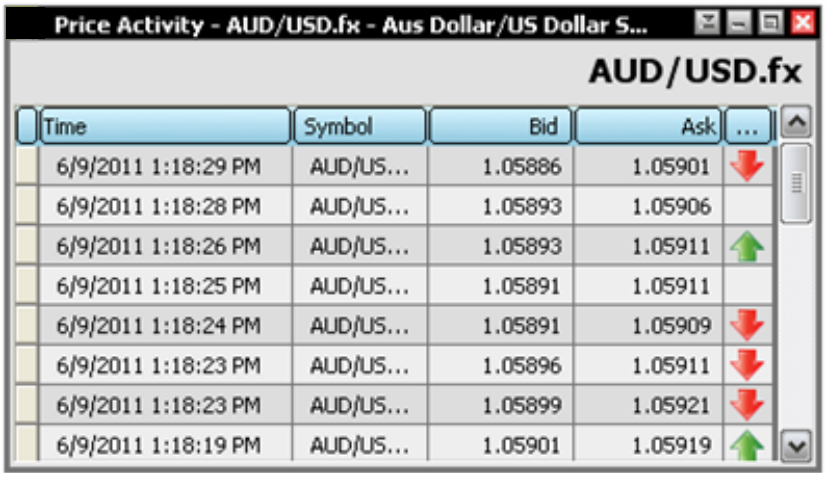


- You can use the to adjust the number of lots, contracts, or stakes that you want to trade. You can also use the Quick Lots or Quick Stake buttons.



The New Order window also contains three buttons.

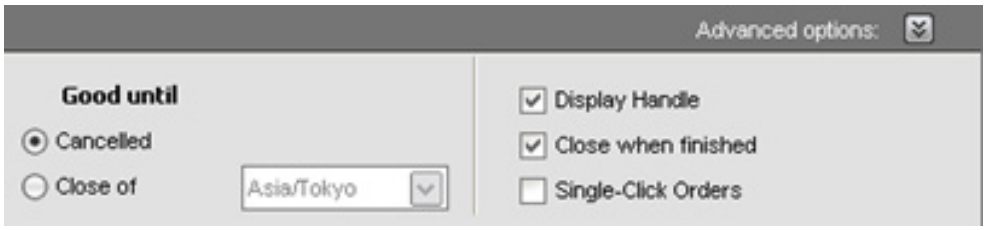
- The Price Activity button opens the Price Activity window, which displays a list of recent price



- The Price Chart button displays a chart for the selected instrument.
- The Save as Default button saves your settings. That way, they'll appear every time you open the New Order window.

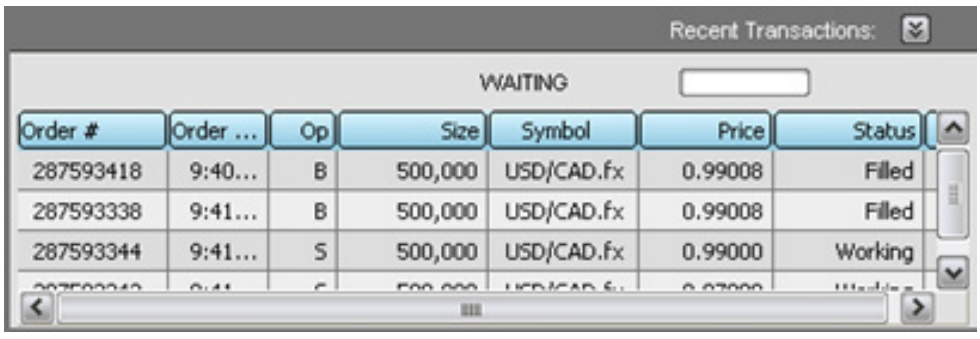
You can click Advanced Options at the bottom of the New Order window to view additional settings for your trade.

- In the Good Until section, you can specify how long you want your order to be available. Cancelled is checked when you first open the window: this means your stop or limit will stay open until you decide to cancel it. If you choose Close of, you can use the Close Of drop-down menu to choose to close an order when a particular global exchange (Tokyo, Hong Kong, London, or New York) does.



- You can also specify setting by clicking the checkbox buttons. Check the Display Handle checkbox to display the whole price of the instrument. If you leave it unchecked, you'll only see the last two numbers.
- If you check Close When Finished, the New Order window closes after you click Submit.
- If you check Single-click Orders, IronFX Multi_Asset Traderexecutes the trade without displaying confirmation window that appears when you place a trade.

You can also click » to view the Recent Transactions section to see your recently placed orders for the selected instrument.



You can configure the New Order window to always display the Recent Transactions section when you place an order. See Specifying Order Settings in the Trades Tab for more information.

PLACING A MARKET ORDER IN THE NEW ORDER WINDOW

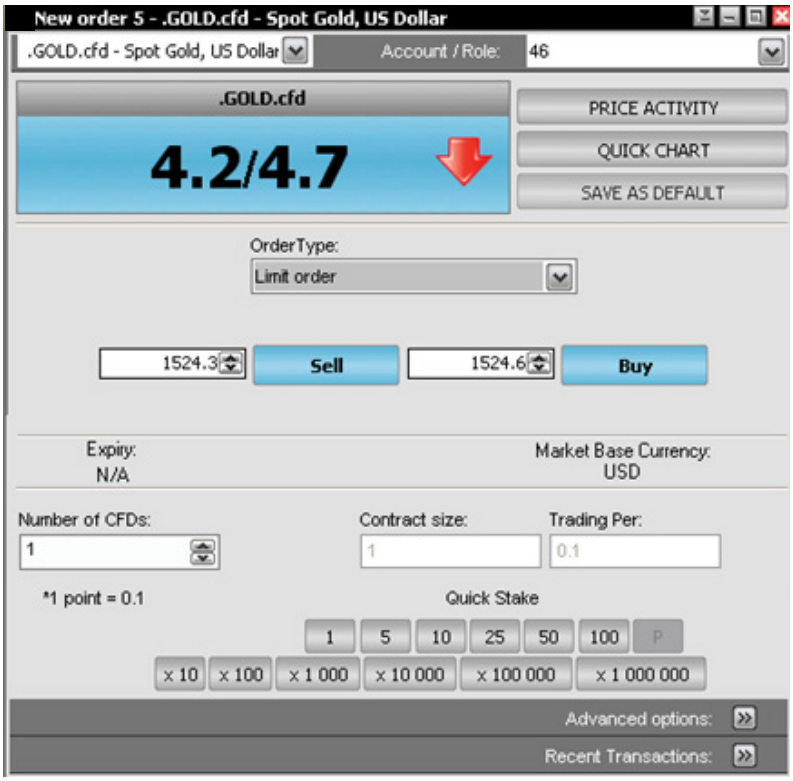
A market order is the most basic order type. You can click Bid (Sell) or Ask (Buy) to place your order.

PLACING A MARKET ORDER IN THE NEW ORDER WINDOW:

1. Click the New Order button in the Quick Access toolbar.
2. Make sure the instrument you want is selected. If it's not, select the instrument by clicking and select an instrument from the drop-down menu.
3. If desired, select the account you want from the Account/Role drop-down menu.
4. Click the Order Type drop-down menu and select Market Order.
5. Use the to adjust the size of your trade, if desired. You can also click the buttons in the Quick Lots or Quick Stake section.
6. Click Bid (Sell) or Ask (Buy).
7. If you have not selected Single-click Orders, a confirmation window will appear. Click Yes to confirm your order.

PLACING A LIMIT OR STOP IN THE NEW ORDER WINDOW

With limit or stop orders, you can specify a price in the New Order window and then click **Sell** or **Buy** to place your order.



When you are entering a buy order, your limit must be set above the current market price while your stop must be set below the current market price. When you are entering a sell order, your limit must be set below the current market price while your stop must be set above the current market price. If you place an order that doesn't meet these requirements, IronFX Multi-Asset Trader will display a Warning window.

After you click OK, you can edit your order in the New Order window and click Sell or Buy again.

PLACING A LIMIT OR STOP IN THE NEW ORDER WINDOW:

1. Click the New Order button in the Quick Access toolbar.
2. Make sure the instrument you want is selected. If it's not, select the instrument by clicking and selecting the symbol from the list.
3. If desired, select the account you want from the Account/Role drop-down menu.
4. Click the Order Type drop-down menu and select Stop Order or Limit Order.

5. If desired, click Advanced Options and change the Good Until option.
6. Use the to adjust the size of your trade, if desired.
   You can also click the buttons in the Quick Lots or Quick Stake section.
7. Adjust the price as desired.
8. Click Sell or Buy.
9. If you have not selected Single-click Orders, a confirmation window will appear.
   Click Yes to confirm your order.

PLACING AN OCO PAIRS ORDER IN THE NEW ORDER WINDOW

When you select the OCO Pairs order type in the New Order window, you can set a stop order and a limit order. When market movements cause either the stop or limit order to be filled, the unfilled order is automatically cancelled.

You can enter settings for up to five order cancels orders (OCO) pairs.

You can turn the stop in your OCO into a trailing stop by clicking the checkbox in the **Trail** column and then entering the number of points or pips in the **Points/Pips** column you want.

If you have more than one OCO, you'll need to distribute the lots, contracts, or stakes between the OCO pairs. The distribution does not have to be even, but the combined number of lots, contracts, or stakes in the OCOs must equal the total number that you are trading.

If you change the number of OCO pairs or the total number of lots, contracts, or stakes after you manually distribute them, you will have to re-enter the values for each OCO before you click **Submit**.

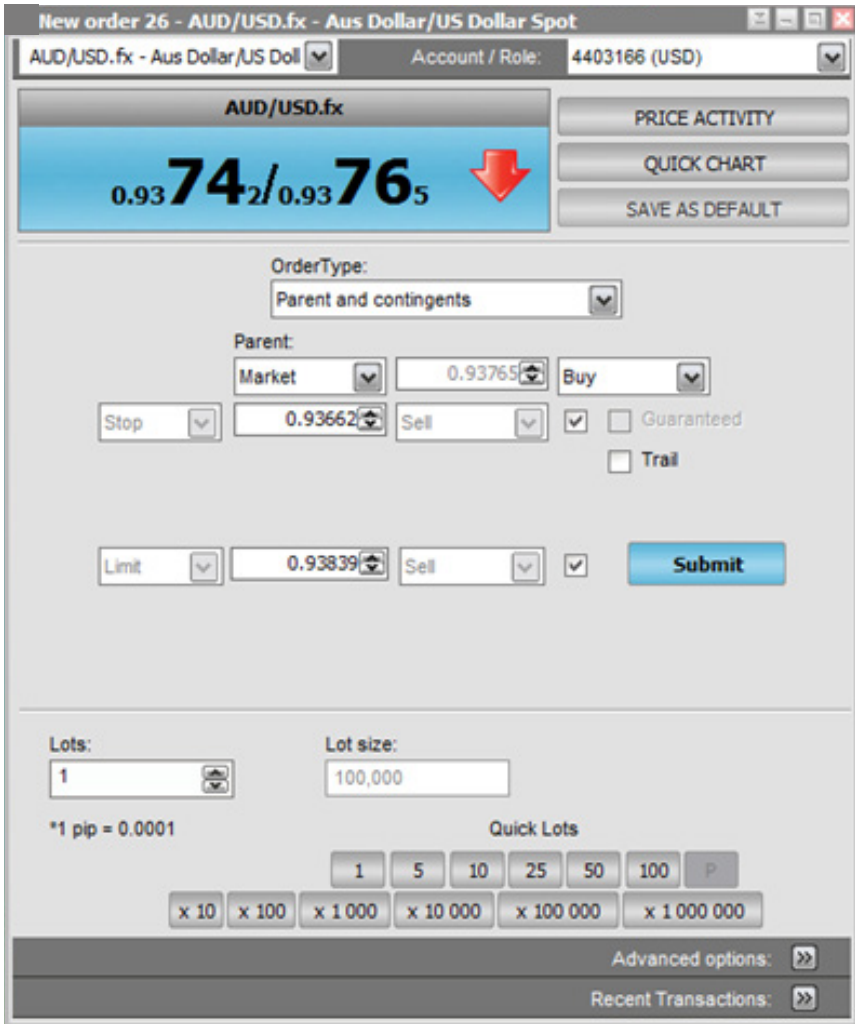
PLACING AN OCO PAIRS ORDER IN THE NEW ORDER WINDOW:

1. Click the **New Order** button in the Quick Access toolbar.
2. Make sure the instrument you want is selected. If it's not, click and select the symbol.
3. If desired, select the account you want from the **Account/Role** drop-down menu.
4. Click the **Order Type** drop-down menu and select **OCO Pairs.**
5. If desired, click **Advanced Options** and change the **Good Until** option.
6. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake** section.
7. Enter the number of pairs you want to use in the **OCO Pairs** text box.
8. Adjust the price and enter the number of lots, contracts, or stakes in each section of each pair. If you want to change one of your stops to a trailing stop, check the box in the **Trail** column and click in the **Points/Pips** column to adjust the trailing number.
9. Click **Submit**.
10. If you have not selected **Single-click Orders**, a confirmation window will appear. Click **Yes** to confirm your order.

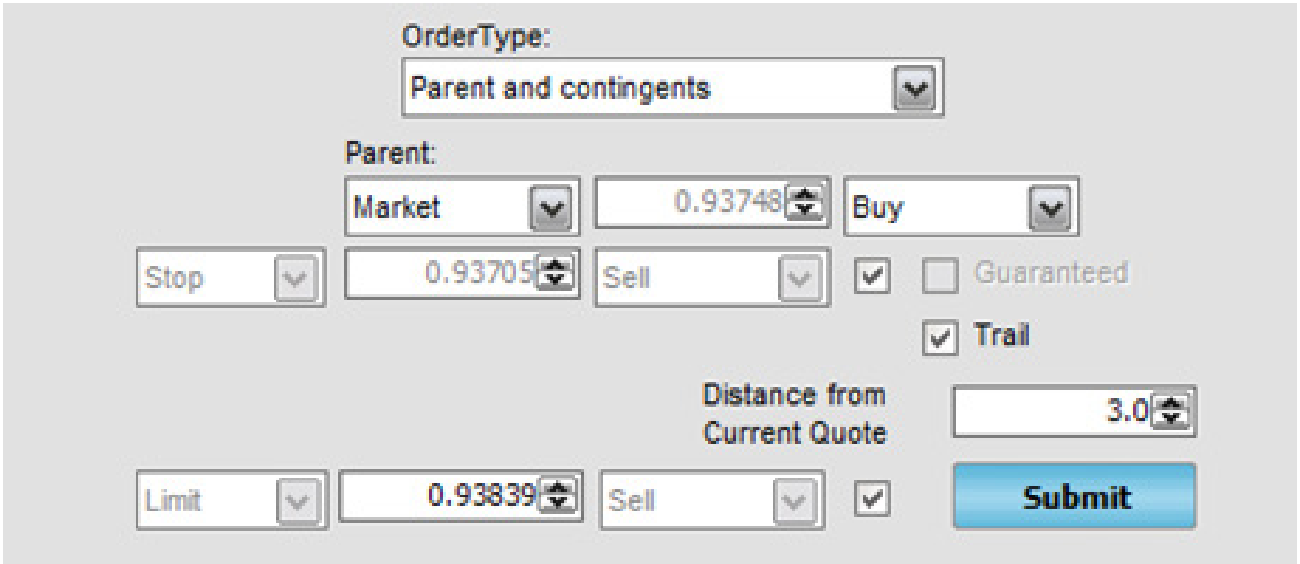
You can also protect an existing open position with an OCO order. See Protecting Open Positions with Stops and Limits.

PLACING A PARENT AND CONTINGENT ORDER IN THE NEW ORDER WINDOW

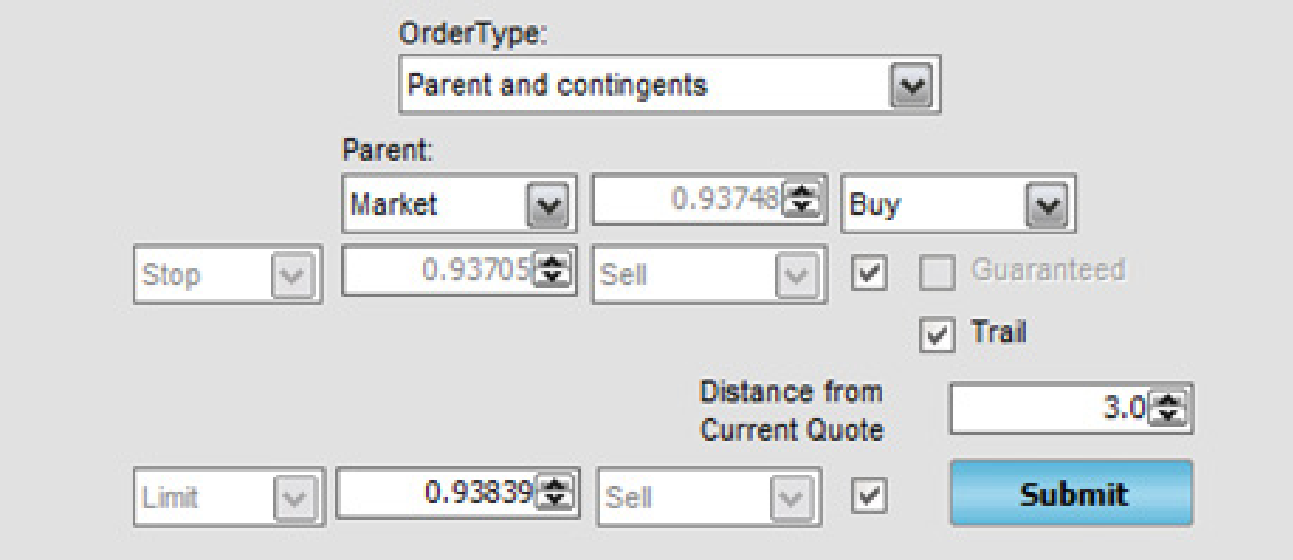
With Parent and Contingents orders, you can specify the parent order and set the prices of the different stops or limits as desired.



You can turn the stop in the parent part of your order into a trailing stop by clicking the **Trail** checkbox and then enter the number of points or pips in the **Distance from Current Quote** text box.



IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange



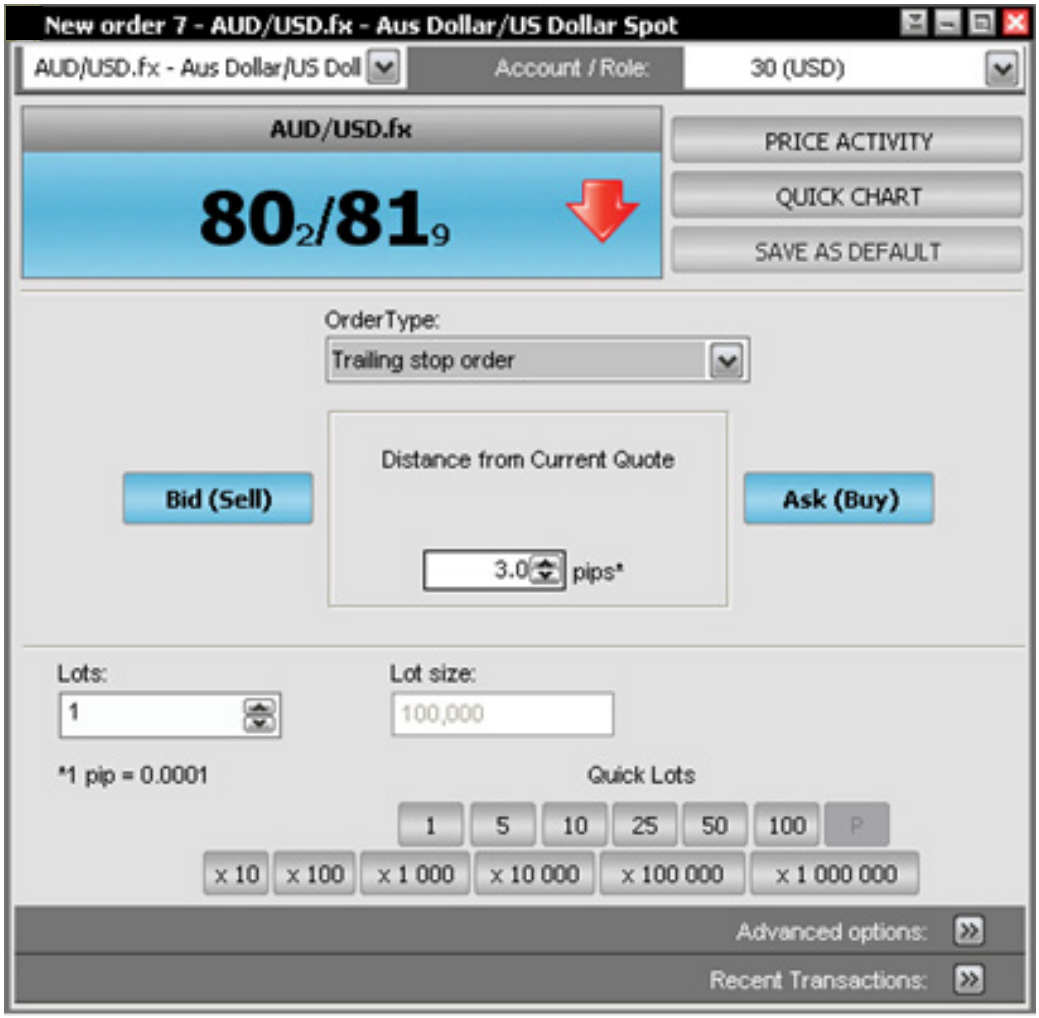
PLACING A PARENT AND CONTINGENTS ORDER IN THE NEW ORDER WINDOW:

1. Click the **New Order** button in the **Quick Access** toolbar.
2. Make sure the instrument you want is selected. If it's not, click and select the symbol.
3. If desired, select the account you want from the **Account/Role** drop-down menu.
4. Click the **Order Type** drop-down menu and select **Parent and Contingents.**
5. If desired, click **Advanced Options** and change the **Good Until** option.
6. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake** section.
7. Select an order type from the **Parent** drop-down menu. If you chose **Limit** or **Stop**, you would also have to enter a price.
8. Select whether you wish to buy or sell.
9. Adjust the price and select **Sell** or **Buy** for the Contingent orders.
10. If you want to use a trailing stop, check the box next to **Trail** and click in the **Distance from Current Quote** text box to enter the number of points or pips.
11. Click **Submit**.
12. If you have not selected **Single-click Orders**, a confirmation window will appear. Click **Yes** to confirm your order.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

SETTING A TRAILING STOP IN THE NEW ORDER WINDOW

With a trailing stop, you can enter the number of points or pips that you want your stop to follow your order. Then, you can click **Bid (Sell)** or **Ask (Buy)** to place your stop.

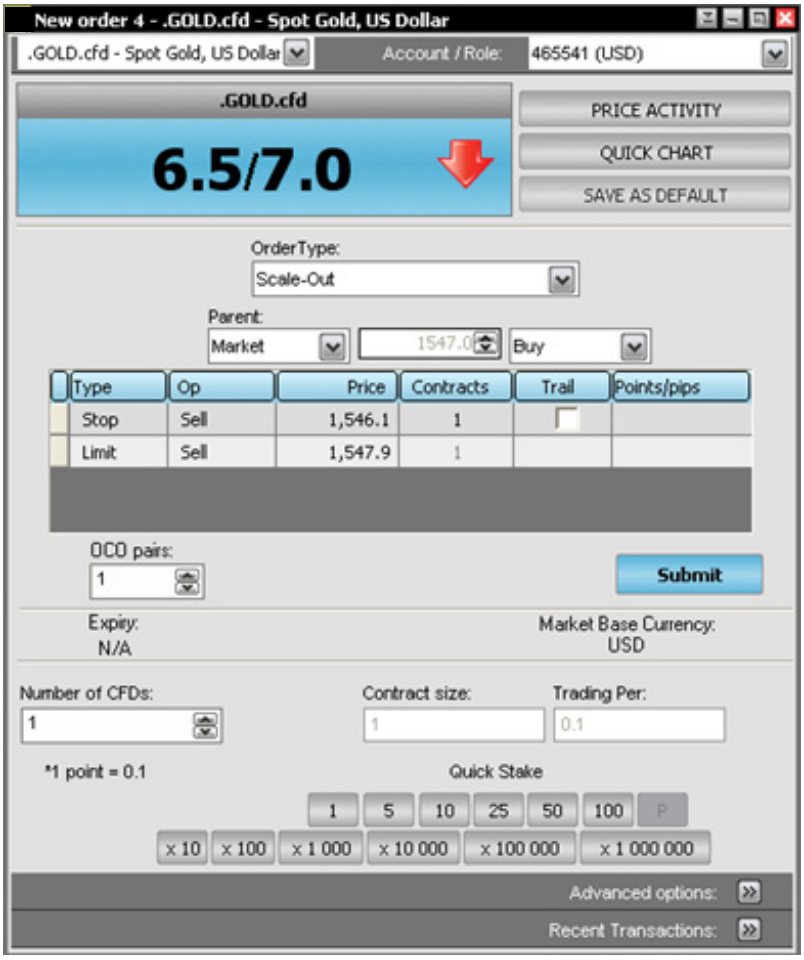


SETTING A TRAILING STOP IN THE NEW ORDER WINDOW:

1. Click the **New Order** button in the Quick Access toolbar.
2. Make sure the instrument you want is selected. If it's not, click and select the symbol from the list.
3. If desired, select the account you want from the **Account/Role** drop-down menu.
4. Click the **Order Type** drop-down menu and select **Trailing Stop Order.**
5. Enter the number of points or pips in the **Distance from Current Quote** field.
6. If desired, click **Advanced Options** and select the **Good Until** option.
7. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake** section.
8. Click **Bid (Sell)** or **Ask (Buy).**
9. If you have not selected **Single-click Orders**, a confirmation window will appear. Click **Yes** to confirm your order.

PLACING A SCALE-OUT ORDER IN THE NEW ORDER WINDOW

With scale-out orders, you can set your parent order as a market, limit or stop order; for limits and stops, you must also enter the price. Once set, you can click **Buy** or **Sell** from the drop-down menu.



If you have more than one order-cancels-order (OCO) pair, you'll need to distribute the lots, contracts, or stakes between these pairs. The distribution does not have to be even, but the combined number of lots, contracts, or stakes in the OCOs must equal the total that you are trading. If you change the number of OCO pairs or the total number of lots, contracts, or stakes after you manually distribute them, you will have to re-enter the values for each OCO before you click **Submit**.

Click the checkbox in the **Trail** column and then enter the number of points or pips in the **Points/Pips** column you want your stop to trail the market.

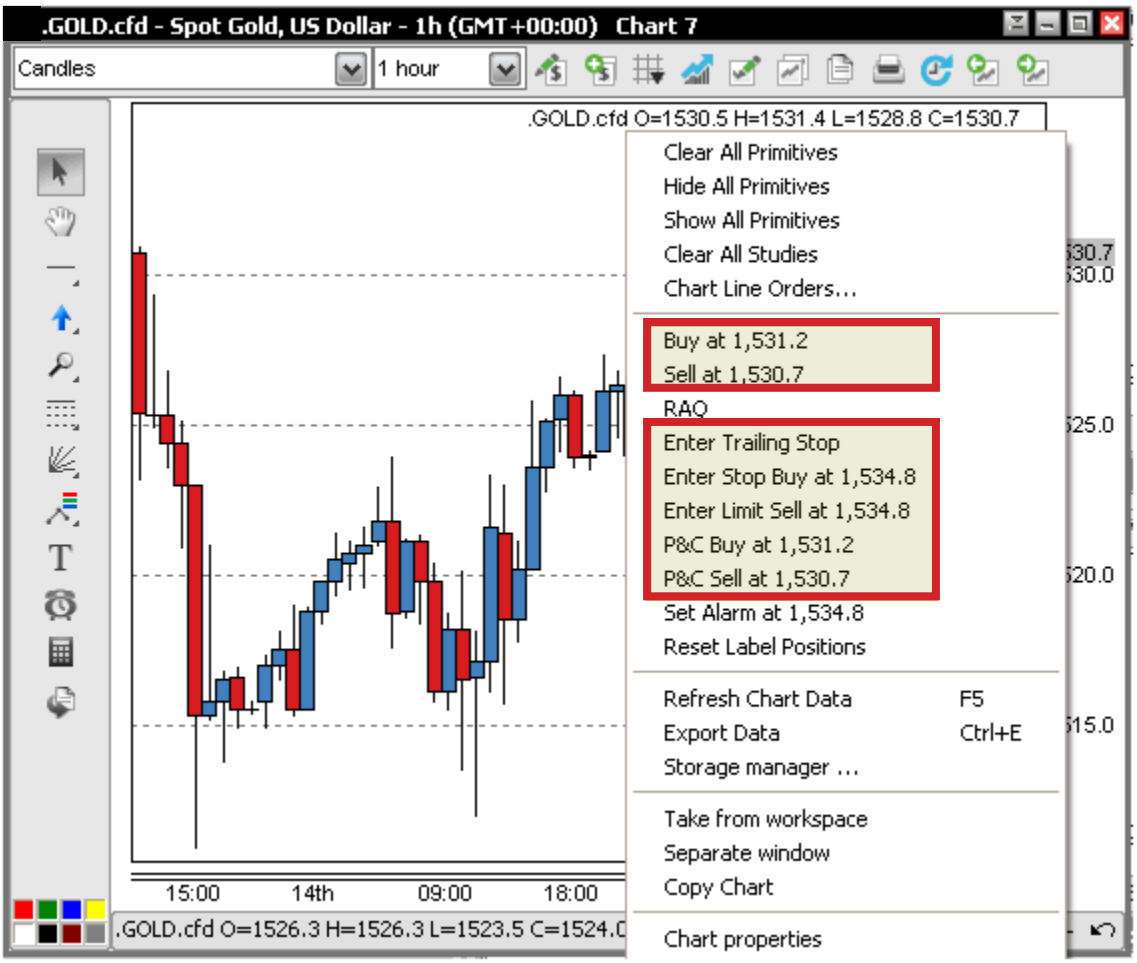
PLACING A SCALE-OUT ORDER IN THE NEW ORDER WINDOW:

1. Click the **New Order** button in the Quick Access toolbar.
2. Make sure the instrument you want is selected. If it's not, click and select the symbol from the list of available instruments.
3. If desired, select the account you want from the **Account/Role** drop-down menu.
4. Click the **Order Type** drop-down menu and select **Scale-Out.**
5. Select an order type from the **Parent** drop-down menu. If you chose **Limit** or **Stop**, you would also have to enter a price.

6. Select whether you wish to **Buy** or **Sell**.
7. Enter the number of pairs in the **OCO Pairs** text box.
8. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake section.**
9. Under **OCO 1**, click in the **Lots** or **Stakes** column of the Stop row and adjust the number of lots, contracts, or stakes. The limit will update automatically.
10. If you want to use a trailing stop, check the box in the **Trail** column and click in the **Points/Pips** column to adjust the trailing value.
11. Enter the price for the **Limit**.
12. Adjust the number of lots, contracts, or stakes in the remaining OCOs.
13. When your order is complete, click **Submit**.
14. In the Order Confirmation window that appears, review your order. If it is correct, click **Yes**. If not, click **No** to make any necessary edits.

TRADING FROM THE CHARTS

You can place trades from the chart window. When you right-click in this window, a drop-down menu appears that displays menu options for placing market orders, stops, limits, and parent and contingents orders.



Buy at.../Sell at...

Places a direct deal order. When you select these menu options, the Direct Deal ticket window opens so you can specify the number of lots, contracts, or stakes and a slippage threshold.

Enter Trailing Stop

Displays the New Order window with the **Trailing Stop** order type settings selected.

Enter Stop Sell at…/Enter Limit Buy at…

Opens the New Order window with either the **Stop** or **Limit** order type settings selected.

P&C Buy at…/P&C Sell at…

Displays the New Order window with the **Parent and Contingents** order type settings selected.

When you open the New Order window using these drop-down menu options, you cannot change the instrument or the order type.

PLACING A DIRECT DEAL ORDER FROM THE CHART:

1. Right-click in the chart window and select either the **Buy at**… or **Sell at**… menu option.
2. Enter the number of lots, contracts, or stakes you want to trade in the **Lots, Number of CFDs** or **Stakes** text box.
3. If you want, click the **Slippage** checkbox and set the number of points or pips.
4. Click **Submit**.

PLACING OTHER ORDER TYPES FROM THE CHART:

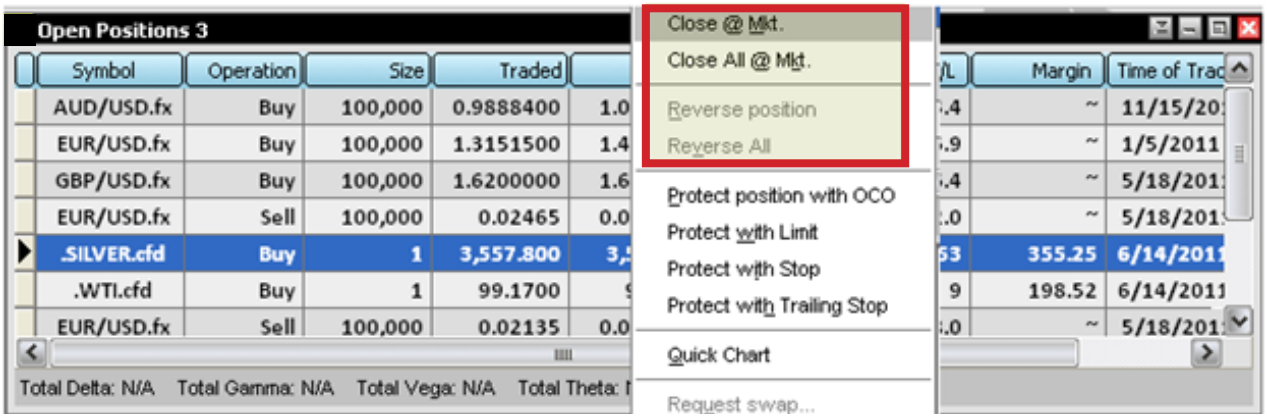
1. Right-click in the chart window and select the menu option you want.
2. If desired, select the account you want from the **Account/Role** drop-down menu in the New Order window.
3. If desired, click **Advanced Options** and change the **Good Until** option.
4. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake** section.
5. Depending on the type of order you selected, you need to do one of these steps.
   - For limit or stop, adjust the price and then click **Sell** or **Buy**.
   - For Parent and Contingents orders, adjust the price as desired for each part of the order. If desired, set the trailing settings as well. Then, click **Submit**.
6. If you have not selected **Single-click Orders**, a confirmation window will appear. Click **Yes** to confirm your order.

You can also place orders based on trend lines or Fibonacci retracements you make in the chart window. For more information, see Placing Chart Line Orders.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

MANAGING OPEN POSITIONS

When your order is filled, whether you have a market order or a stop or limit, it becomes an open position; you can view details about it in the Open Positions window. If you right-click on a position in this window, you can view a drop-down menu that contains menu options for managing your positions.



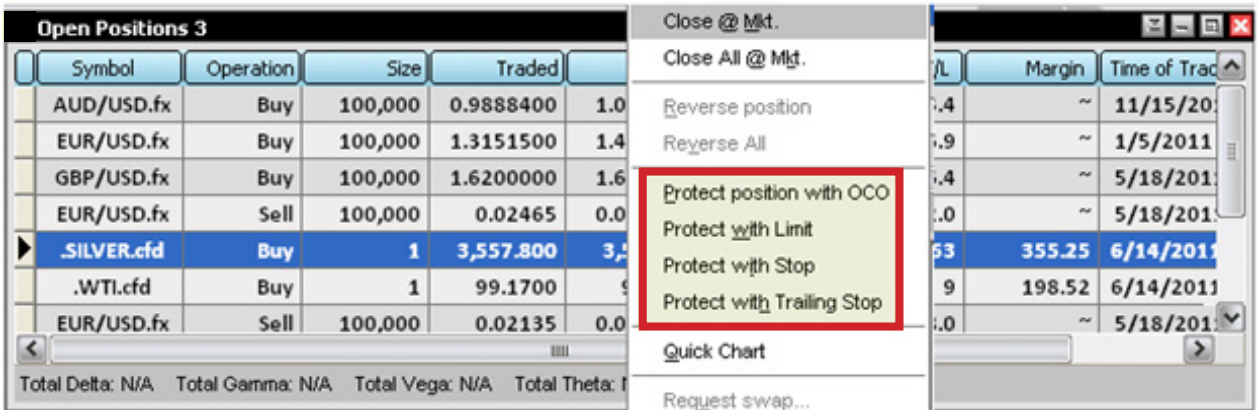
Close @ Mkt. closes the selected open position at the current market price. To close orders, right-click on the desired open position, select **Close @ Mkt.** you want, and confirm your order. You can also close all of your open positions at once by selecting **Close All @ Mkt.**

If the market changes abruptly, you can quickly close a position and open a new order in the opposite direction by right-clicking on the position and selecting **Reverse Position.** In this example, clicking **Reverse Position** closes your NZD/USD sell order and opens a NZD/USD buy order. You can also reverse all of your open positions at once by selecting **Reverse All.** No confirmation window appears when you click these; however, you will be charged a spread for each open position you reverse.

Quick Chart opens a chart of the selected instrument. You'll learn more about this feature in Section 3: Using the Charting Tools.

PROTECTING OPEN POSITIONS WITH STOPS AND LIMITS

You can set stops and limits in IronFX Multi-Asset Trader by right-clicking on the desired open position in the Open Positions window and selecting one of the **Protect** menu options from the drop-down menu. When you select **Protect Position with OCO, Protect with Limit, Protect with Stop** or **Protect with Trailing Stop**, the New Order window appears; its drop-down menus are already set with the selected instrument and order type, so you can enter the prices and order size quickly.



IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

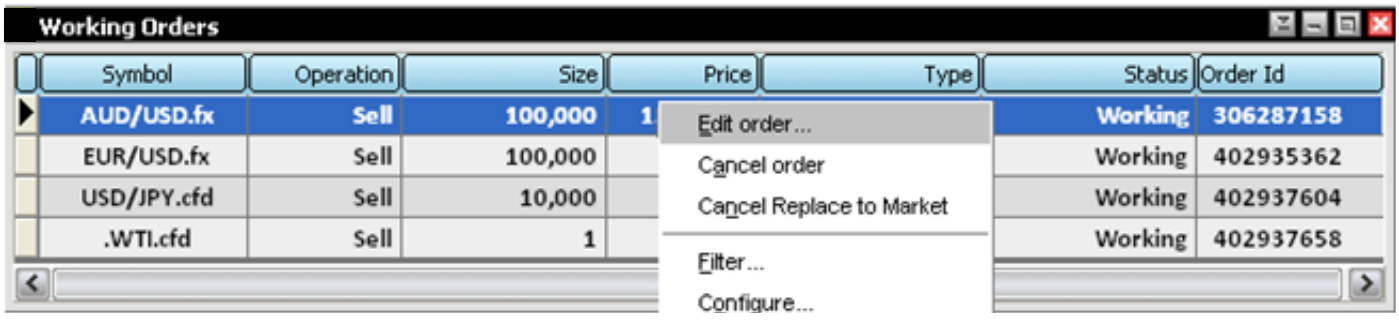
PROTECTING OPEN POSITIONS WITH STOPS AND LIMITS:

1. In the Open Positions window, right-click the position you want to protect and then select **Protect Position with OCO, Protect with Limit, Protect with Stop or Protect with Trailing Stop.**
2. If desired, select the account you want from the **Account/Role** drop-down menu in the New Order window.
3. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots or Quick Stake** section.
4. If desired, click **Advanced Options** and set the **Good Until** settings. Depending on the type of order you selected, you need to do one of these steps.
   - For limit or stop, adjust the price and then click **Sell or Buy.**
   - For OCOs, adjust the price as desired for each part of the order. If desired, set the trailing settings as well. Then, click **Submit**.
   - For **Trailing Stop** orders, enter the number of points or pips that you want the stop to trail in the **Distance from Current Quote** and click **Sell** or **Buy**.
5. If you have not selected **Single-click Orders,** a Confirmation window will appear. Click **Yes** to confirm your order.

Orders placed using Protect… are not linked to the open position. If you close the open position manually, the working order set up to protect the position will remain open until you also close it manually or it is triggered by market conditions.

MANAGING WORKING ORDERS

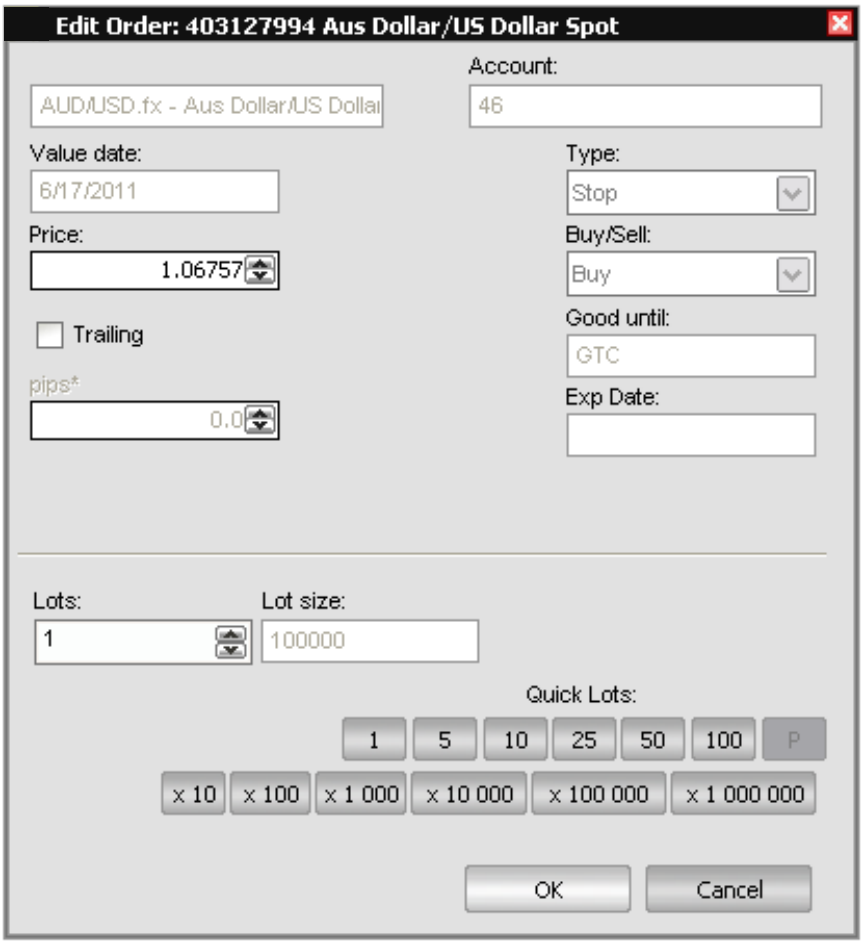
When you create a stop or limit order, it becomes a working order; you can view details about it in the Working Orders window. If you right-click on a working order in this window, you can view a drop-down menu that contains menu options for cancelling or modifying your working orders.



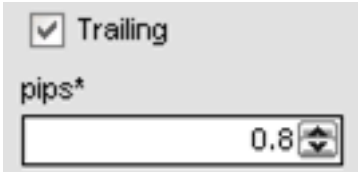
When you need to cancel a working order, you can right-click on the desired working order and select **Cancel Order.** You can also force an order in the Working Orders window to open at the current market price by selecting **Cancel Replace to Market.**

When you need to edit a working order, you can select **Edit Order.**.. from the Working Orders window. This opens the Edit Order window.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange



You'll notice the drop-down menus in this window are already set with the selected instrument and order type, so you can edit the prices and size for your working order quickly.
If you're editing a stop and want to change it to a trailing stop, you can check the box in the **Trailing** checkbox and click in the **Pips** or **Points** text box to adjust the trailing number.



EDITING WORKING ORDERS:

1. In the Working Orders window, right-click on the desired working order and select **Edit Order**…
2. Adjust the price.
3. If desired, click the **Trailing** checkbox and click in the **Pips** or **Points** text box to adjust the trailing number.
4. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake** section.
5. Click **OK**.

You can also edit stops and limits right from the chart.
See Editing Orders from the Charts.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

CLOSING WORKING ORDERS AND OPEN POSITIONS

If your Quick Access toolbar is configured to include **Close All**, you can open the Close Working Orders and Open Positions window. This window displays all of your working orders and open positions.

Close working orders and open positions
Working orders:
Order Id | Account Id | Symbol | Operation | Size | Price | Type | Status
306287076 | 30 (... | GBP/USD.cfd | Sell | 100,000 | 1.65388 | Limit | Working
306287120 | 30 (... | EUR/USD.fx | Sell | 100,000 | 1.47571 | Limit | Working
306287158 | 30 (... | AUD/USD.fx | Sell | 100,000 | 1.05000 | Stop | Working
Open positions:
Account Id | Symbol | Operation | Size | Traded | Last | P/L | Value Date | Pip_P
30 (... | AUD/USD.fx | Buy | 100,000 | 0.9888400 | 1.05957 | 7,073.00
30 (... | EUR/USD.fx | Buy | 100,000 | 1.3151500 | 1.44999 | 13,484.00
30 (... | GBP/USD.cfd | Buy | 100,000 | 1.6200000 | 1.63638 | 1,638.00
Don't show this dialog again
Select All
Close Selected
Cancel

You can then choose to close multiple orders or positions by clicking checkboxes to select orders and then clicking **Close Selected**. You can mark all orders to be closed by clicking **Select All**.

You can choose to hide the Close Working Orders and Open Positions window by clicking the **Don't show this dialog again** checkbox. When selected, IronFX Multi-Asset Trader automatically closes all positions and cancels all orders.

You can configure the New Order window to always display the Recent Transactions section when you place an order.
See Specifying Order Settings in the Trades Tab for more information.

PLACING A HEDGE TRADE

Hedging allows you to be both long and short in the same market at the same time.

You should be aware that enabling hedging will automatically apply this feature to all of your linked Multi-Asset accounts. With hedging enabled, the only way to close a trade is to select the open trade and close it – if you try to close the trade by opening an opposing position, the system will always open a hedge trade.

When you place two equal sized opposing trades, the net required margin will be reduced by 95%.
The first trade you place will be subject to normal margin rules so the required margin will be 100%.
But if you place an opposing hedge trade it will receive hedging margin which has a default setting of -90% on Multi-Asset - see the example below for how that works. Please note that in the platform we only display required margin on opposing positions in the aggregate view – we do this because showing margin for individual positions can be confusing.

	HEDGING DISABLED (CURRENT)	HEDGING ENABLED
EXAMPLE 1	You place a buy trade in EUR/USD with a notional value of 100,000 with 1% margin, meaning your required margin is 1,000. You then place a sell trade in EUR/USD a notional value of 100,000. **Result:** the sell trade will close out the original buy trade and you will have no open positions in the market.	You place a buy trade in EUR/USD with a notional value of 100,000 with 1% margin, meaning your required margin is 1,000. You then place a sell trade in EUR/USD with a notional value of 100,000. **Result:** both the buy and the sell positions will be open. The buy trade will have a margin of 1,000 and the sell trade will have a margin of -900 (-90%), making your net margin requirement 100.
EXAMPLE 2	User trades Gold with 2% margin Buys 100,000 = margin is 2,000 Sells 100,000 = closes out opposing (buy) position Total margin = 0 (user has no open positions)	User trades Gold with 2% margin Buys 100,000 = margin is 2,000 Sells 100,000 = margin is -1,800 Total margin = 200

TRADING WITH DEPTH 360

If you want to view Level 2 (L2) market data about a particular instrument, you can monitor market movements by price point and track current positions using Depth 360. You can access it from the Trades menu by clicking Depth 360.

The Detailed View should be displayed to see the price summary table. If it's not, click to open or close the price table.

At the top of the Depth 360 window, you can view a status bar. This shows you the net change, your net position, your P/L and how long you've had the Depth 360 window open.
When you first open Depth 360, you can select an instrument to display by using the **Instrument** drop-down menu.

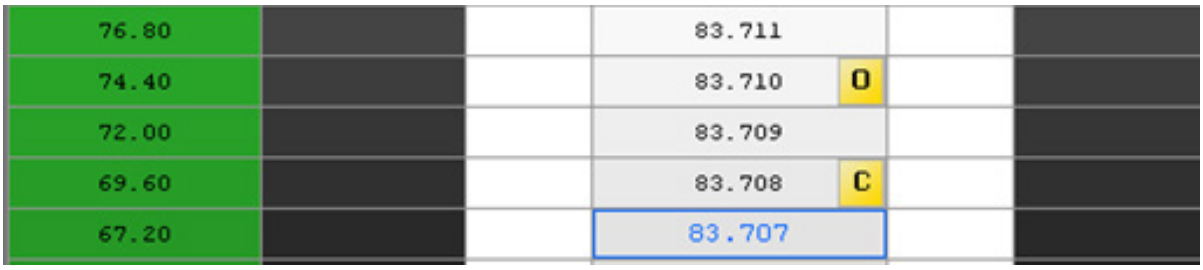
Depth 360 1
Net change: 0.313
Net position:
USD/JPY.fx - US Do
Sell
USD/CHF.fx - US Dollar/Swiss Franc Spot
USD/CZK.fx - US Dollar/Czech Koruna Spot
USD/DKK.fx - US Dollar/Danish Krone Spot
USD/HKD.fx - US Dollar/Hong Kong Dollar Spot
USD/HUF.fx - US Dollar/Hungarian Forint Spot
USD/ILS.fx - US Dollar/New Israeli Shekel Sp
USD/JPY.fx - US Dollar/Japanese Yen Spot
USD/MXN.fx - US Dollar/Mexican Peso Spot

If you have more than one account that you trade from, you can also switch accounts using the **Accounts** drop-down menu.

The **Sell** and **Buy** prices also appear on quote tickers at the top of the Depth 360 window. You can click on these to place a market order for the selected instrument and confirm it.

If you do not want to confirm orders, you can right-click on the quote ticker and select **Single-click Orders** from the drop-down menu. As long as this is active, it will remain check marked in the menu.

The Price column in the Depth 360 window is populated with a range of prices for the instrument when you first open it. In this column, the price highlighted in red shows the current buy price for an instrument while the price in blue shows the current sell price.



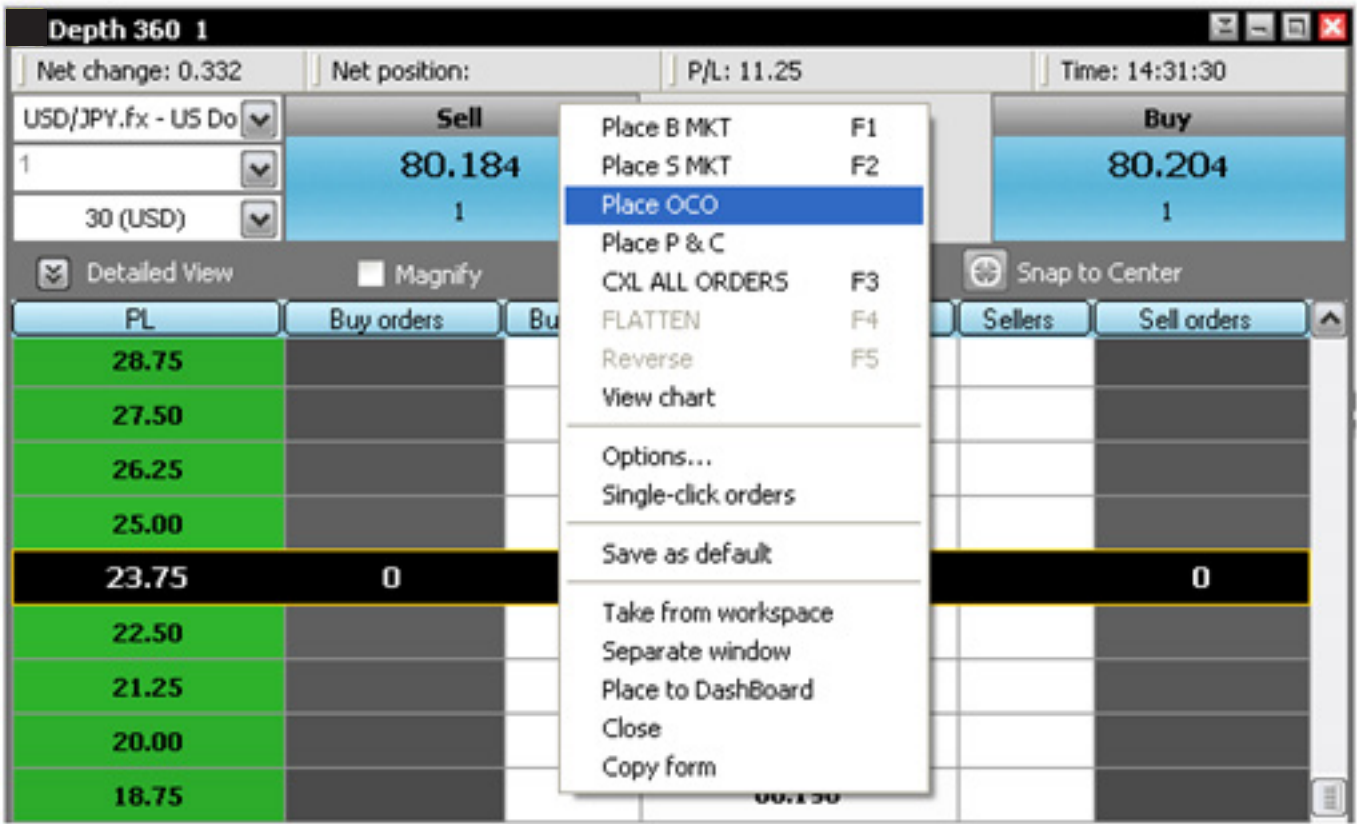
The row highlighted black is the current price of the market. After you place orders, this will also display the number of buy or sell working orders you have placed for this instrument in the **Buy Orders** and **Sell Orders** columns. The **C** next to the price display the price the market closed at while the **O** next to the price is the price at which the market opened.

Once you place an order, the **PL** column displays what your profit or loss would be. This corresponds to the price in the **Price** column. The price that you opened the trade at is marked in the PL column with a T; this price is always 0.00 as your breakeven point.

You can click **Snap to Center** to make sure the current market price is always displayed in the middle of the price table.

If you click in the **Buyers** or **Sellers** columns on a particular price, you can place a limit or stop order at that particular price. Once you confirm these working orders, they appear in the **Buy**

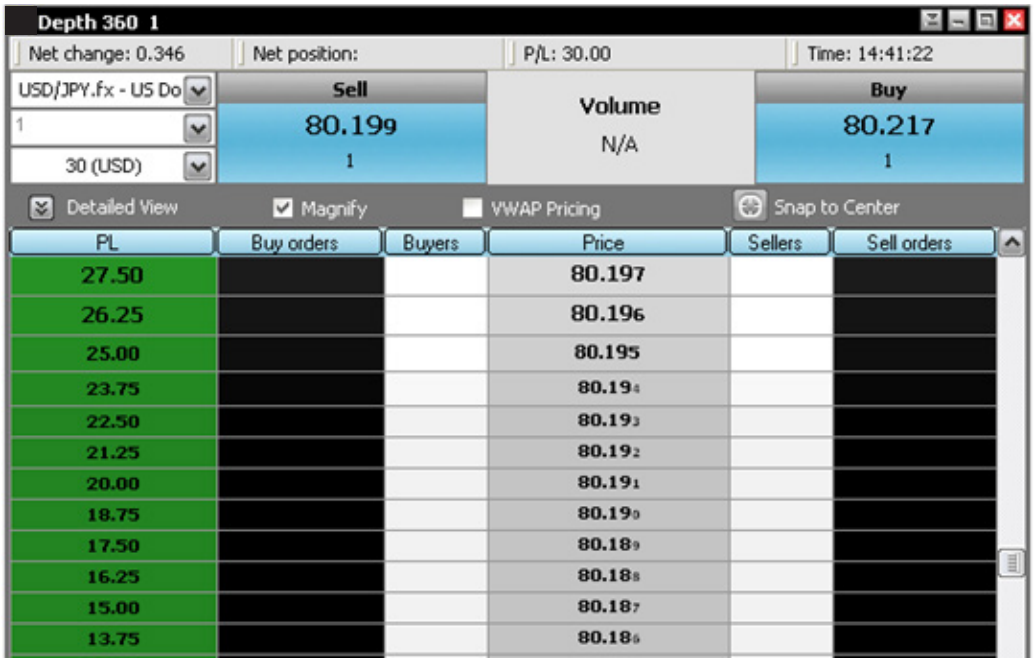
Orders or **Sell Orders** columns. If you need to edit these orders, you can click on the order and drag it to a new price.
At the bottom of the Depth 360 window, you can view the last order filled for the selected instrument.
You can also place market orders, limits and stops, as well as order types, such as order cancels order (OCO) or parent and contingent orders by right-clicking in the pricing table and selecting a **Place**… menu option.



When you want to close all positions and working orders at once, you can right-click in the pricing table and select **Flatten**. If you want to reverse a position, you can right-click in the pricing table and select **Reverse**.
If you want to close only your working orders, you can right-click in the pricing table and select **CXL All Orders.**

You can also enter or exit orders using keys on your keyboard. When you first open IronFX Multi-Asset Trader, Depth 360 is set up so you can click F1 to place a buy order, F2 to place a sell order, F3 to close all working orders, F4 to flatten all orders, or F5 to reverse all orders.

You can use options at the top of the price table to customise the appearance of Depth 360.
When you check **Magnify**, the font of the current price is displayed larger than the rest of the prices.



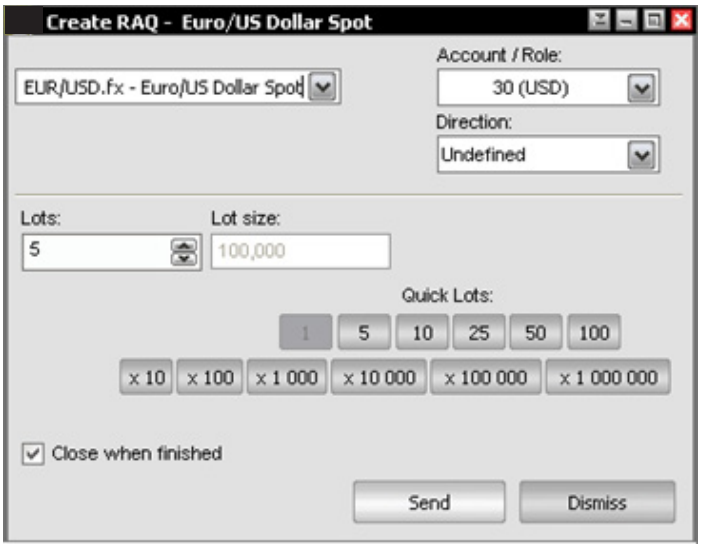
If you check **VWAP Pricing**, Depth 360 shows the volume weighted average price (VWAP) of the instrument.

You can customise these and other commands in Depth 360.
See Customising Depth 360 for more information.

REQUESTING A QUOTE

If you are trading an unusual instrument, such as a currency pair with an exotic currency, you can use Request a Quote (RAQ) to view the spread of your potential trade.

An exotic currency is one that is not commonly traded. Because of this, exotic currencies tend to have very large spreads. The South African rand (ZAR) is an example of an exotic currency.



You can request a quote from the following places:

- In the Quote Board, you can right-click in the instrument row you want and select **New RAQ.**
- In the Chart window, you can right-click in the chart and select **RAQ**.

These open the Create RAQ window. This is where you can select an instrument, the direction that you think you'd like to go, and the size of your trade. When you click **Send**, IronFX Multi_Asset Traderopens the Confirm Streaming RAQ window. This displays the current quote. You can then choose whether you want to buy, sell or pass.

Like a Direct Deal ticket or the Quote Tickers, you need to click **Sell** to sell at the listed price. Click **Buy** to buy at the listed price. You will only have 10 seconds to decide if you want to enter the trade or not. After that time, you will have to request a new quote. If you know you do not want to enter the order, click **Pass**.

REQUESTING A QUOTE FROM THE QUOTE BOARD:

1. Right-click in the instrument row that you want in the Quote Board and select **New RAQ.**
2. Make sure the instrument you want is selected.
3. Select an option from the **Direction** drop-down menu.
4. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake** section.
5. Click **Send**.
6. When the confirmation window appears, click Sell or Buy, or if the order is not acceptable, click **Pass**.

CALCULATING COSTS USING THE PIP CALCULATOR

You can use the Pip Calculator to estimate how your total order amount will change if the last digit in the symbol quote is changed. You can access this by selecting **Pip Calculator** from the **View** menu.

Only a few fields will be active when you first open this window: the **Symbol** drop-down menu, the **Account** drop-down menu and the **Lots** text box. You'll make selections in these to determine the value in the **Pip/ Point Value** text box.

You can enter the profit/loss you hope to get by clicking » to display the Advance Options section. In the **P/L** text box, you can enter the profit/loss you hope to get with this position. The **Pips** text box will update automatically.

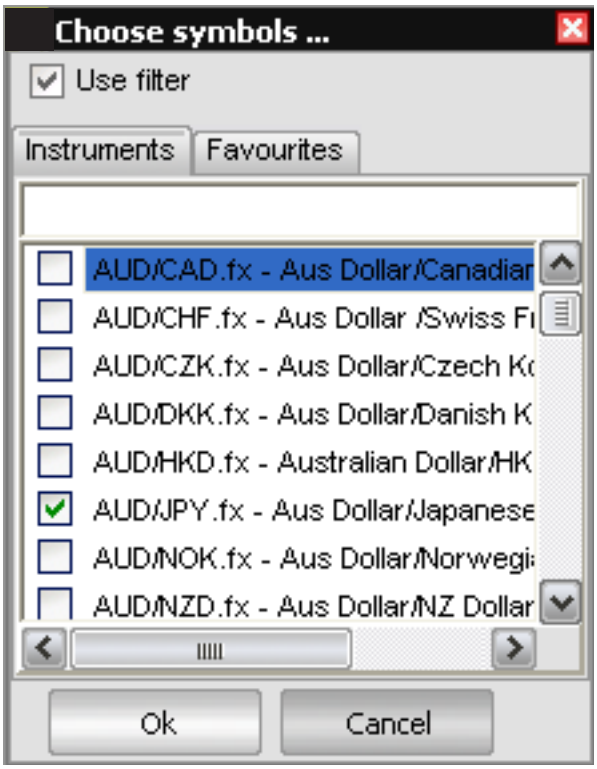
CALCULATING COSTS USING THE PIP CALCULATOR:

1. Select **Pip Calculator** from the **View** menu.
2. Select the desired instrument from the **Symbol** drop-down menu.
3. Make sure the account you want to use is selected in the **Account/Role** drop-down menu.
4. Enter a number in the **Lots** text box, if necessary.

Be sure to check which account is selected in the Pip Calculator window. Your accounts use different settings for trade size or base currency. They may also be different account types (position-based or net-based). All of these factors may have an effect on the outcome of your trade.

FILTERING ORDERS

In the Quote Board and Open Positions and Working Orders windows, you can use the **Filter**… menu option to narrow down the number of items that appear.



FILTERING ORDERS:

1. Right-click in the row you want and then select **Filter**…
2. In the Choose Symbols…window, click the check box for **Use Filter.**
3. Scroll through the list in the **Instruments** or **Favourites** tabs and select the instruments that you want. You can also enter the first few letters of the symbol in the text box at the top of the window. The list automatically updates to display the closest matches.
4. Click **OK**.

When you are done viewing the filtered list, you can click **Filter**… and uncheck **Use Filter** to remove the filter.

VIEWING FILLED ORDERS

When you are placing multiple orders, you can display a list of orders that have been executed or filled by IronFX Multi-Asset Trader using the Filled Orders window. To display this window, click **Filled Orders** from the **View** menu.

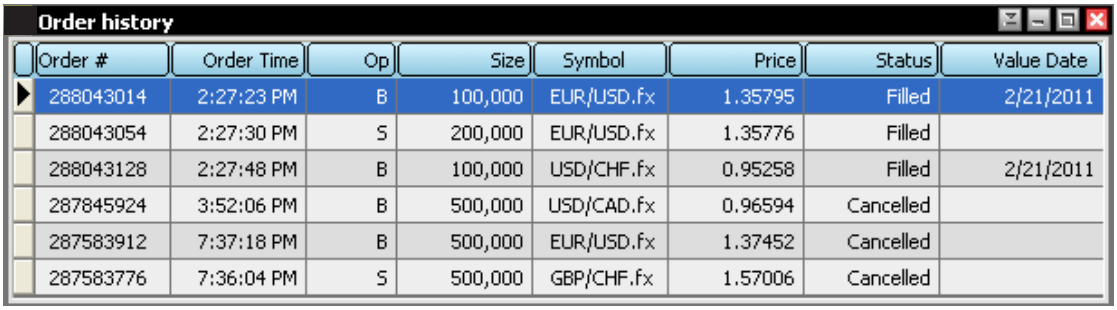
Ready. Last 1 days

You can select either a range of days or specify an interval and click **Apply**. IronFX Multi-Asset Trader then lists the results in the bottom half of the window. These results display a variety of information, such as the issued price and filled price as well as the time and date it was filled.

VIEWING ORDER HISTORY

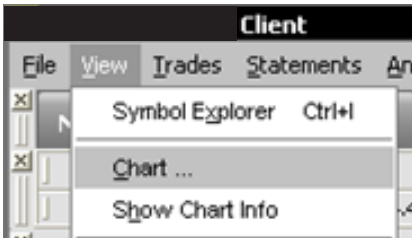
You can view a log of all of the orders issued during your current log in session in the Order History window. You can access this by selecting **Order History** from the **View** menu.



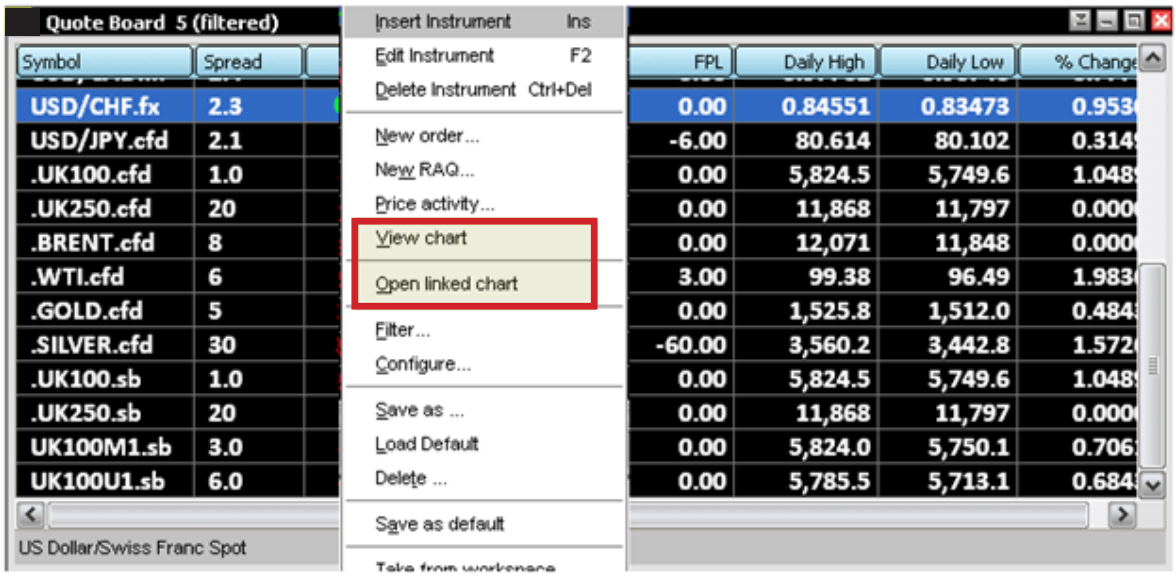
You can select either a range of days or specify an interval and click Apply. IronFX Multi-Asset Trader then lists the results in the bottom half of the window. These results display a variety of information, such as the issued price and filled price as well as the time and date it was filled.

VIEWING ORDER HISTORY

You can view a log of all of the orders issued during your current log in session in the Order History window. You can access this by selecting Order History from the View menu.

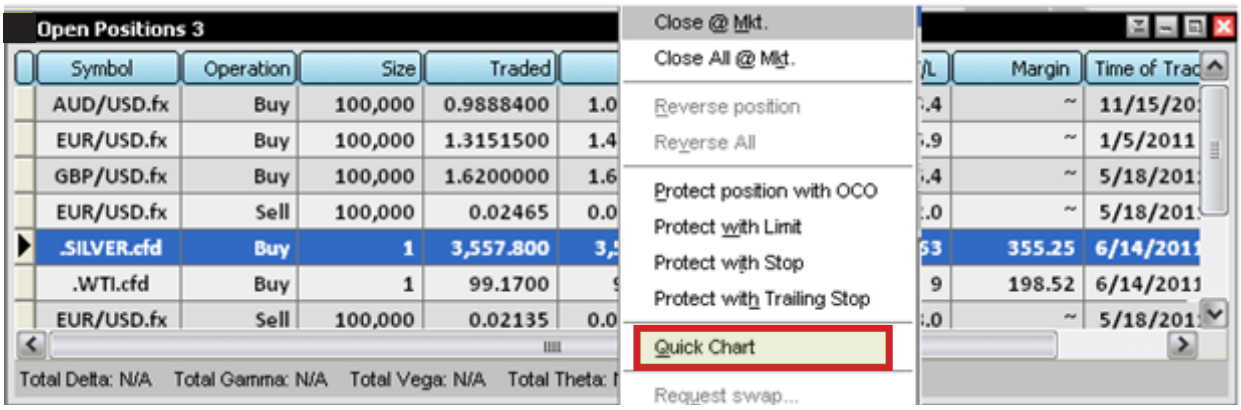


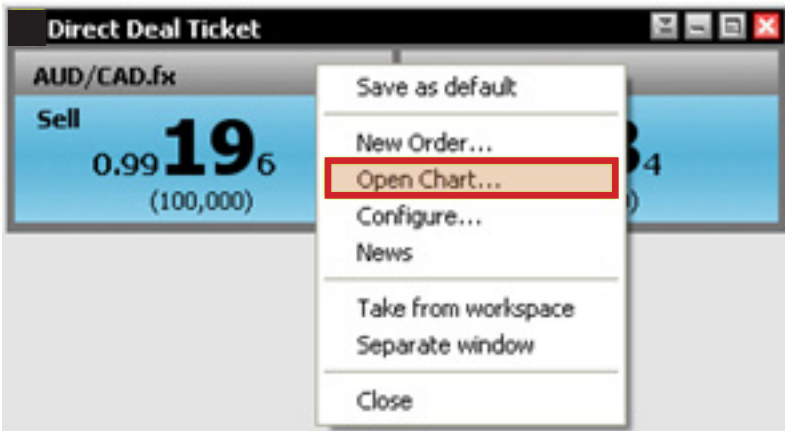
- From within the Quote Board , right-click in the row of the instrument that you want and select **View Chart.** You can also select **Open Linked Chart**; this kind of chart updates when you select an instrument in the **Quote Board**. If the Quote Board isn't displayed, select Quote Board from the **View** menu.



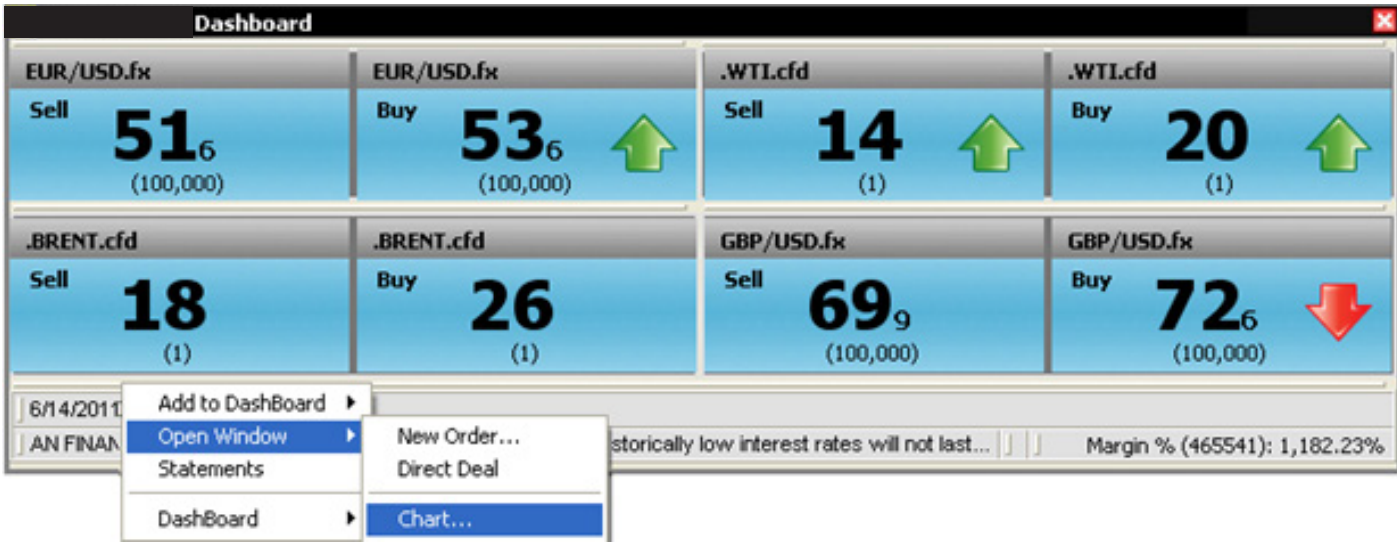
- From the New Order window, make sure the instrument that you want is selected and click on the **Quick Chart** button. If the New Order window isn't displayed, select **New Order** from the **Trades** menu.

- From the Open Positions window, right-click in the row of the instrument that you want and select **Quick Chart.** If Open Positions isn't displayed, select **Open Positions** from the **View** menu.





- From the Dashboard, right-click in the status bar, select **Open Window** and select **Chart**. If the Dashboard is not displayed, select **Dashboard** from the **View** menu.



VIEWING THE CHART WINDOW

Once the chart window is open, you'll notice a few features.

When the chart window opens, you can maximise the window to fit the entire workspace by clicking .

Prices are shown on the right side of the chart. IronFX Multi-Asset Trader highlights the current market prices. The price will be highlighted green if it is higher than the previous price, red if it is lower than the previous price, and gray if the price hasn't changed.

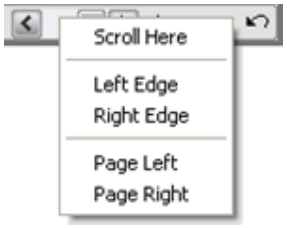
If you're trading currency pairs, you can display the fractional pip in the chart window in the Chart Properties window. For more information, see Changing Chart Appearance on the General Tab.

The legend, which shows the symbol and current price, appears in the upper right corner. This also appears in the lower left corner of the window.

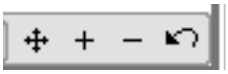
Intervals in the time frame appear on the bottom of the chart (on select chart types).

The left and right arrow buttons allow you to scroll the chart to the left and right, respectively. You can also point your mouse over the scroll bar and use the mouse wheel to scroll right and left.

If you right-click on the scroll bar, you can view a drop-down menu, which you can use to move about the chart.



Next to the scroll bar, you can use the **Zoom** buttons. The + button will zoom in on the chart; the – button will zoom out of the chart; the arrow button undoes the last zoom change; and the cross button resets the chart to its original view when it opened.



You can change colours, fonts and other settings in the chart. For more information, see Setting Chart Properties.

USING THE CHART TOOLBARS

When you open the chart window for the first time in IronFX Multi-Asset Trader, you'll notice toolbars on the top and left side of the chart. The top toolbar features the following tools:

If there are no toolbars appearing in the chart window, right-click in the chart and deselect the **Floating Toolbar** menu option. If the Left Toolbar is not visible, right-click in the chart and select the **Left Toolbar** menu option.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

Displays the currently selected chart type. You can also use this to display a list of eight chart types and select another.

Displays the currently selected time frame. You can use this to display a list of time frames and select another.

Change Chart Symbol changes the instrument displayed in the chart.

Change Secondary Chart Symbol displays the price movements of two different instruments in the same chart. If you subscribe to Foresight-A.I., you can also use this to add it to the chart.

Grid Kind displays a grid over the chart. You can choose to display horizontal lines, vertical lines, both kinds of lines or none at all.

Setup Indicators opens the **Chart Indicators** window , which you can use to select indicators to display in the chart.

Chart Properties displays the Chart Properties window. You can use this to adjust background colours, alarms settings, chart type properties and other settings.

Chart Templates opens the Chart Templates window. You can use this to save your chart settings as a template and then load them when opening a new chart.

History generates a chart history for a particular instrument based on a start and end date.

Print opens the Print window so you can print the displayed chart.

Indicator Alarms sets indicator alarms to notify you when a price meets or exceeds a certain condition.

Previous Chart/Next Chart enables you to navigate between the displayed charts.

cannot be used when tick is selected in the **Time Frame** drop-down menu

THE LEFT TOOLBAR FEATURES THE FOLLOWING TOOLS:

Select enables you to click on lines, retracements or other drawing objects and drag them to new locations in the chart. After you click most icons in this toolbar, this tool becomes active; you will need to click this after you use the Pan or Zoom tool.

Pan Tool allows you to click in the chart and drag to move back and forth in the chart timeline.

Drawing Tools adds over a dozen trend drawings to the chart.

Arrow Tools adds an arrow graphic to the chart. You can select a left arrow, right arrow, up arrow or down arrow from the drop-down menu.

Zoom Tool displays menu options for zooming into the chart. Select Zoom In to enhance the chart size or Zoom In Region to click and drag over a section of the chart that you want to zoom in on.

Fibonacci Tools adds Fibonacci drawings to a chart.

Gannt Tools adds Gannt drawings to a chart.

DiNapoli Tools adds DiNapoli drawings to a chart.

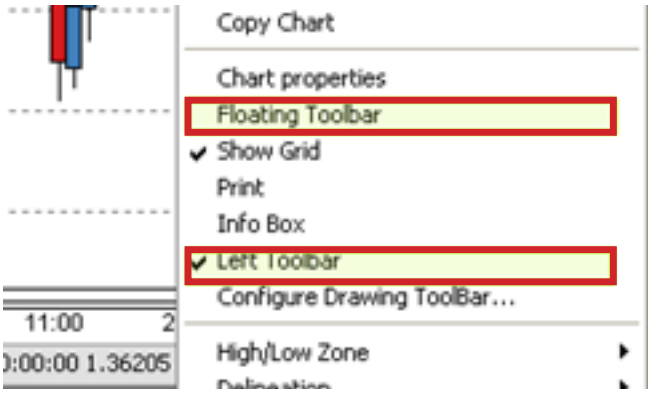
Value Calculator allows you to click and draw a line between two points on the chart. IronFX Multi-Asset Trader will calculate the value of the gradual rise or fall.

Export Data allows you to export the chart data to a text file.

Text Tool adds a custom label to any part of the chart.

Alarm Tool sets price alarms.

You can display or hide the toolbars by right-clicking in the chart window. When **Left Toolbar** is checked, the left toolbar is displayed. You can also choose to have the toolbars displayed as floating toolbars by clicking the **Floating Toolbar** menu option.



You can specify which buttons appear in the left toolbar. See Configuring the Drawing Toolbar in the Chart Window for more information.

SELECTING THE CHART TYPE AND TIME FRAME

When you open a chart window for the first time in IronFX Multi-Asset Trader, the chart displays the price movements of the selected instrument as candlesticks, measuring intervals in one-hour increments.

Any time you open the chart window, you can view 1000 units of the currently selected time frame. For example, when you open the chart window for the first time in IronFX Multi-Asset Trader, the timeline displays the price moves over the past 1000 ticks. You can change the number of units that appear and appearance of the chart using the Chart Properties window. See Changing Chart Appearance on the General Tab.

As you trade, you may want to switch the instrument that is displayed. You can do this by clicking and selecting a new instrument from the Select Symbol window.

Candles is selected in the Chart Type drop-down menu and 1 hour appears in the Time Frame drop-down menu.

Change the time frame before you change the chart type. The selections that you see in the Chart Type drop-down menu depend on your selection in the Time Frame drop-down menu.

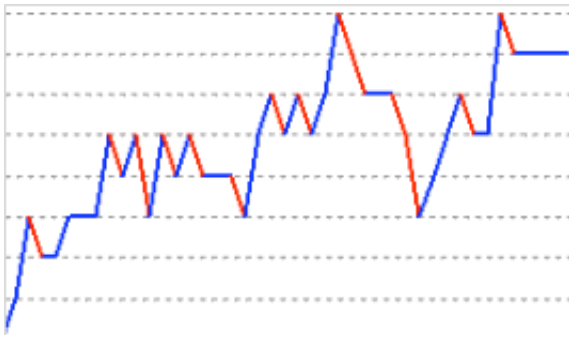
Click in the Time Frame drop-down menu. You can scroll down the list and select one of the following time frames:

Tick	10 minute	40 minute	4 hour
1 minute	15 minute	45 minute	8 hour
2 minute	20 minute	50 minute	Daily
3 minute	25 minute	55 minute	Weekly
4 minute	30 minute	1 hour	Monthly
5 minute	35 minute	2 hour	

You can also add tick candle selections to the Time Frame drop-down menu. Tick candles look at trading volume rather than time. At IRONFX, you can choose to add Fibonacci-based selections for 55 Ticks, 89 Ticks, 144 Ticks and 253 Ticks. For more information on how to get these added to the Time Frame drop-down menu, contact IRONFX.

You can then click in the Chart Type drop-down menu. This displays eight possible chart types.

LINE



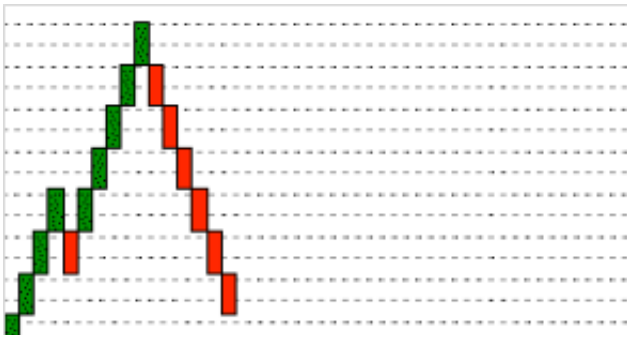
PF

BAR

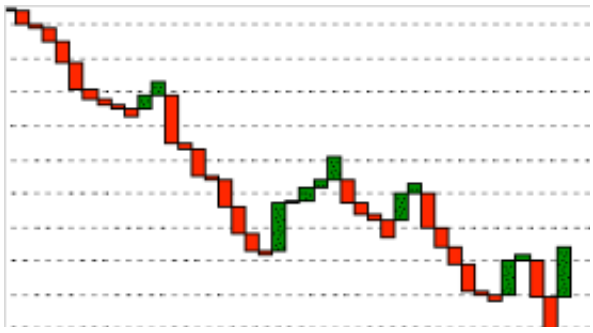
CANDLES

KAGI

RENKO



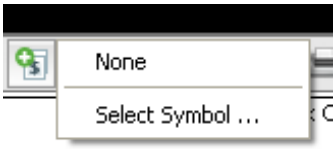
THREE LINE BREAK

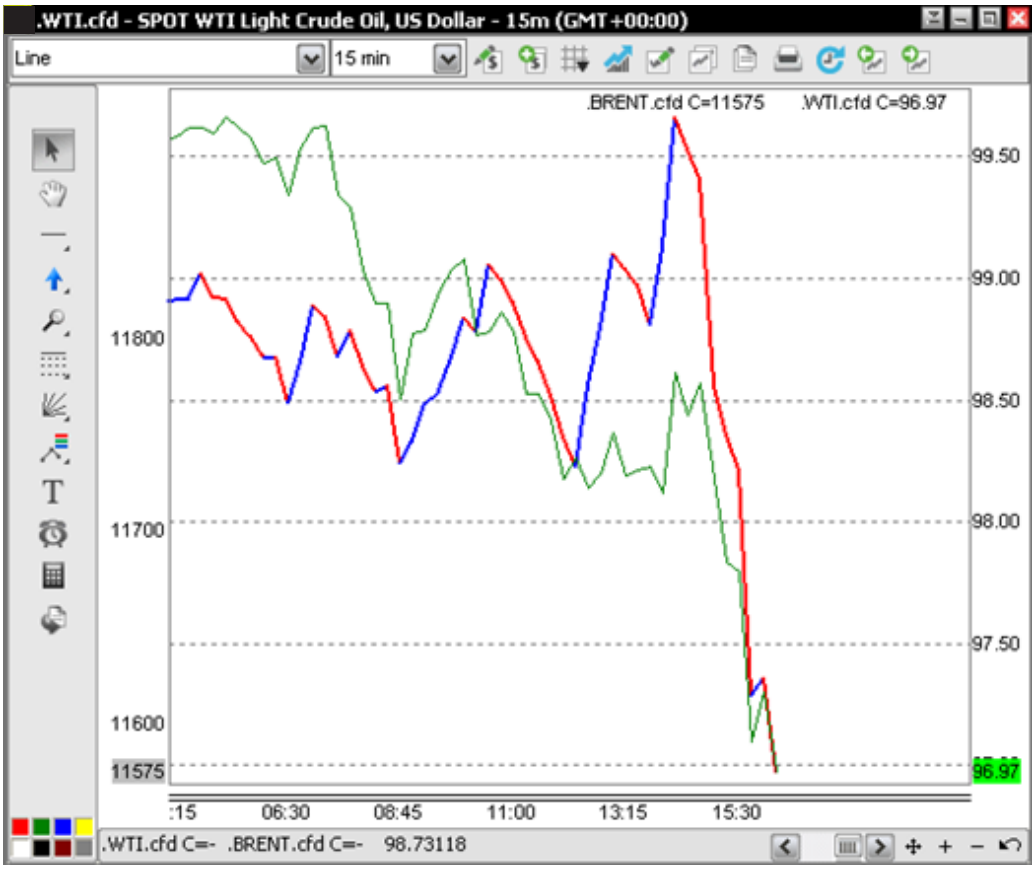


HEIKIN ASHI

DISPLAYING A SECOND INSTRUMENT ON THE CHART WINDOW

You can add another instrument to the chart by clicking and clicking **Select Symbol…**





A chart with the Spot WTI Light Crude Oil (.WTI.cfd) as the original instrument (in red/blue) and the Spot Brent Crude Oil (.BRENT.cfd

By default, the second instrument appears as a green line. Its prices appear on the left side of the window. This only appears so you can analyse and compare it to the first instrument. If you place a trade from the chart window, IronFX Multi_Asset Traderonly applies it to the original instrument.

If you display a second instrument on a linked chart, the price movements of the second instrument remain displayed while the first pair updates as you click on instrument rows in the Quote Board.

When you are done comparing instruments, click again and click **None** from the drop-down menu.

If you subscribe to Foresight-A.I., you can also click to add the forecast for the displayed instrument to the chart window.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

DISPLAYING DELINEATION

You can display intervals of time as alternating bands of colour by right-clicking in the chart and clicking **Delineation**. This displays a drop-down menu with options for delineating the chart by the minute, hour, day, week, month or year.

The EUR/USD in five-minute chart with delineation intervals set by the hour. IronFX Multi-Asset Trader alternates intervals by shading them gray and white.

Delineation will not be available in all time frames.

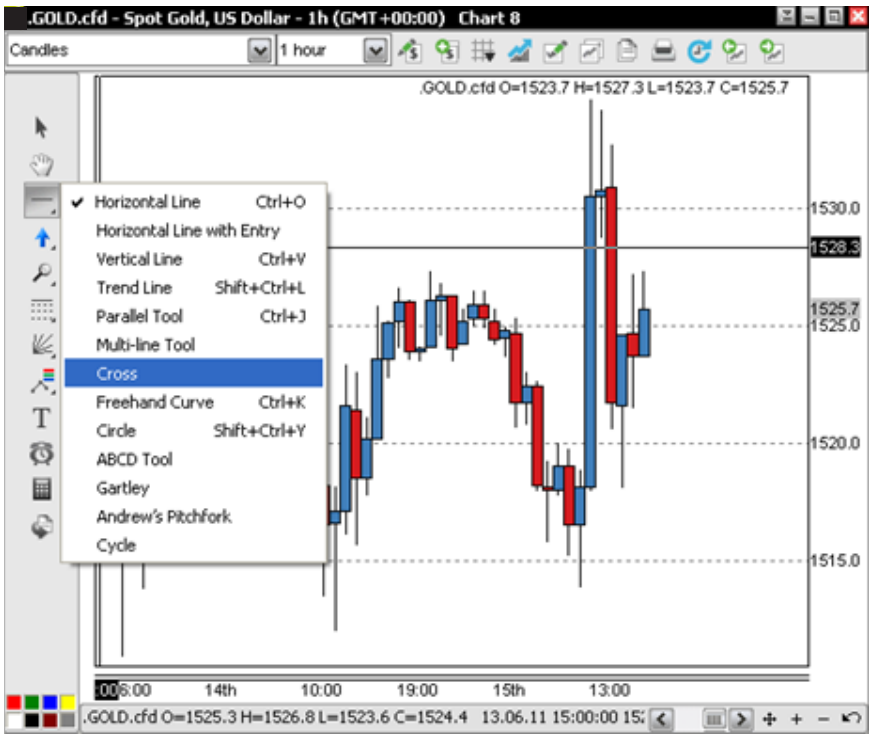
To turn delineation off, select **None** from the drop-down menu.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

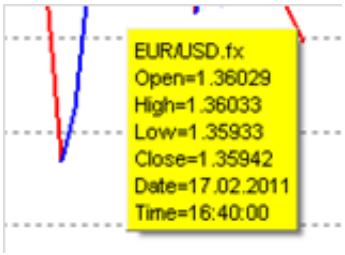
DISPLAYING THE CROSS AND ADDITIONAL DETAILS

You can turn your cursor into a crosshair in the chart window.

To activate this, click the **Drawing Tools** icon and select **Cross** from the drop-down menu. **Cross** remains active until you select another tool or click the button again.



When you scroll over the price movements with the guide, additional information, such as the high and low prices and time, appears in a pop-up widow.

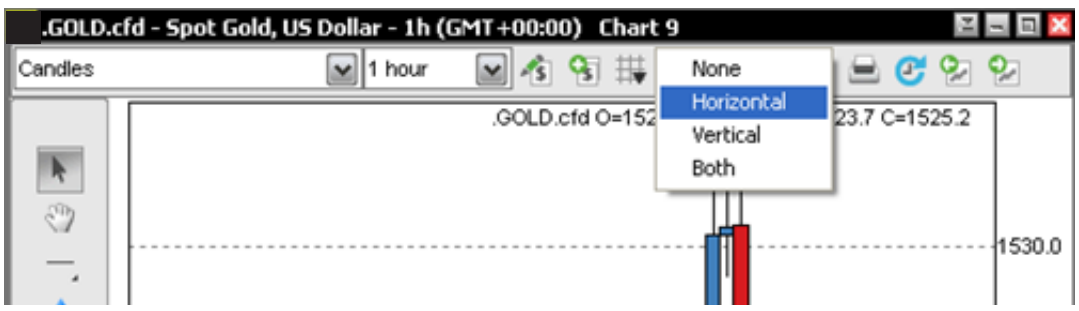


You can also display chart and indicator information by right-clicking in the chart and selecting **Info Box.**

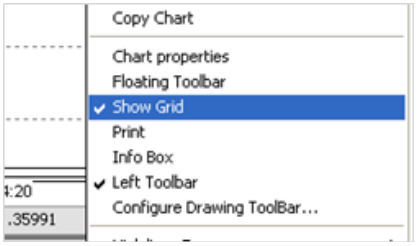
You can specify settings for the **Cross** in the Chart Properties window. See Specifying Tool Settings for the Chart on the Miscellaneous Tab.

DISPLAYING A GRID

When you first open IronFX Multi-Asset Trader, the chart displays vertical grid lines. You can click and choose to display horizontal or vertical lines, both types of lines, or none at all.

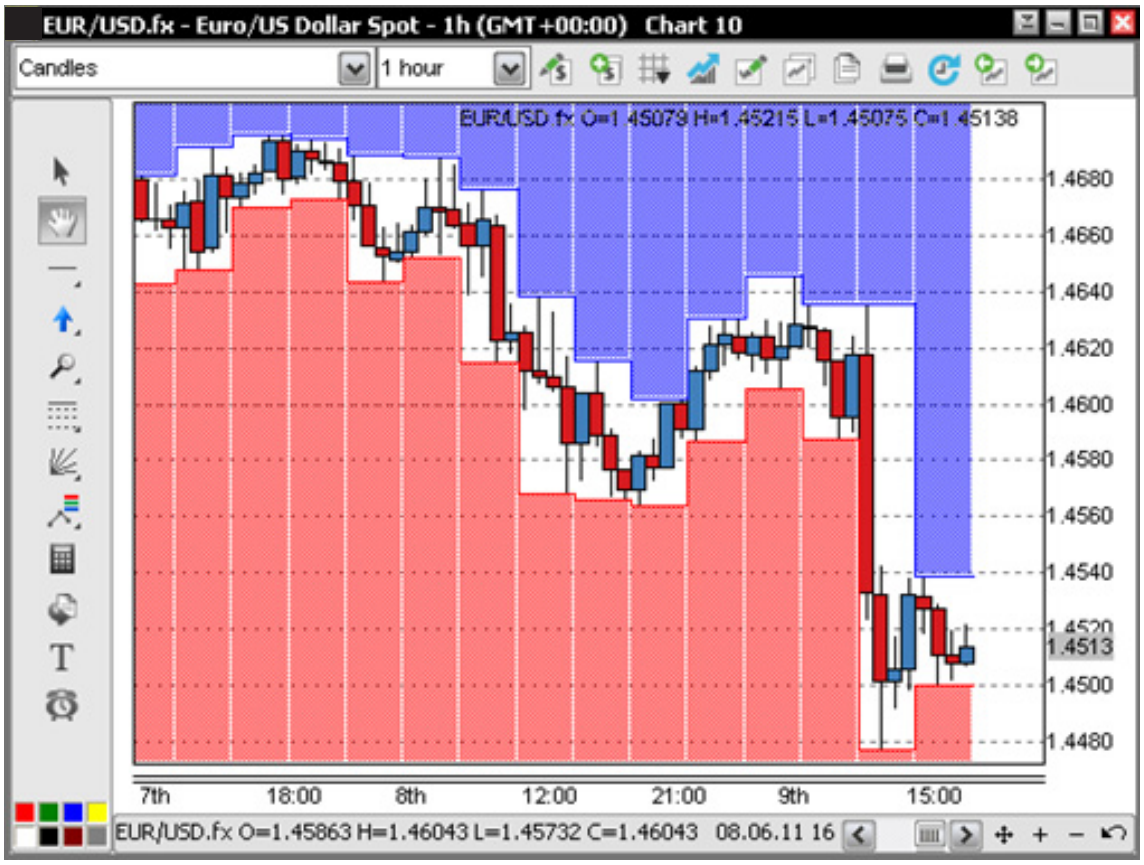


If you need to remove the grid temporarily, you can right-click in the chart and uncheck **Show Grid**. If you check **Show Grid** again, IronFX Multi-Asset Trader applies the grid based on the last grid settings selected.



DISPLAYING HIGH/LOW ZONES

You can set the chart window to display high and low zones on the chart by right-clicking and selecting **High/Low Zone**. In the drop-down menu, select whether to display the high and low zones for a week, month, or year.



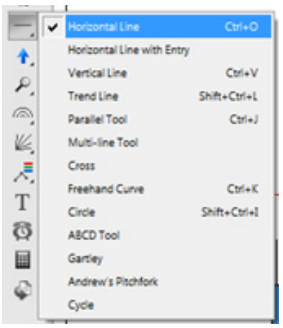
To turn high and low zone lines off, select **None** from the drop-down menu.

You can specify settings for the **High/Low Zone** option.
See Specifying Tool Settings for the Chart on the Miscellaneous Tab.

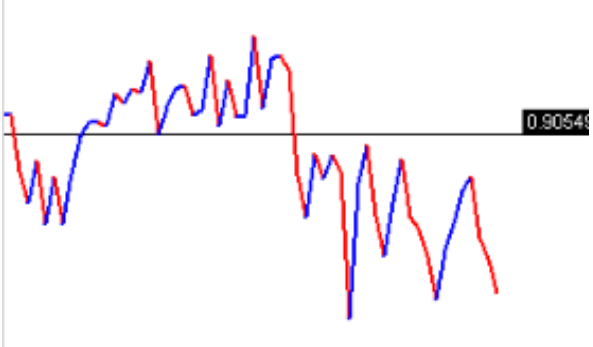
DRAWING IN THE CHART

As you trade, you'll want to examine the chart, looking for possible patterns and trends in the price movements. You can use the Drawing tools in the chart window to plot support and resistance levels, identify simple and complex patterns and create other notations on the chart.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

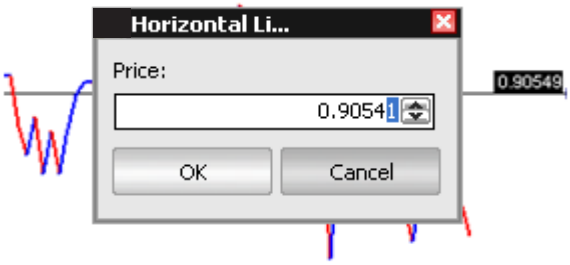


You can select one of 12 different tools by clicking and selecting the tool you want from the drop-down menu.



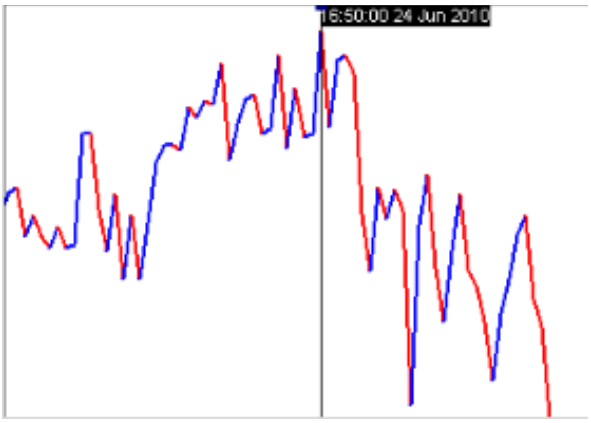
HORIZONTAL LINE

You can use this tool to plot a horizontal support or resistance level. When selected, click in the chart to place the line.



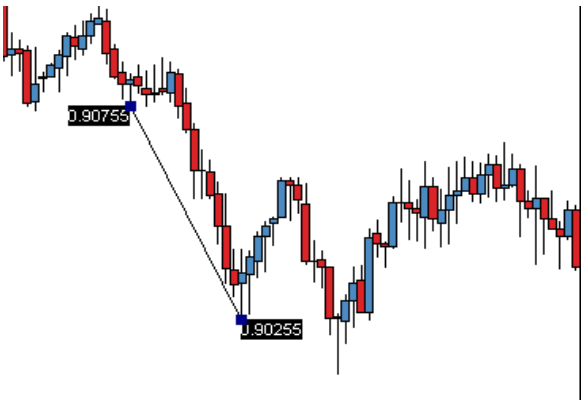
HORIZONTAL LINE WITH ENTRY

You can use this tool to specify a support or resistance level. When selected, click on the chart and the Horizontal Line Price window appears, so you can enter a specific price point.



VERTICAL LINE

You can use vertical lines to mark the beginning of a trend or specify a time when you entered the market. When selected, click in the chart to place the line.



TREND LINE

A trend line is a diagonal line drawn through a series of high or low price points. When selected, click where you want your line to begin and drag your cursor to draw the line. You can add multiple diagonal lines to the chart.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

MULTI-LINE

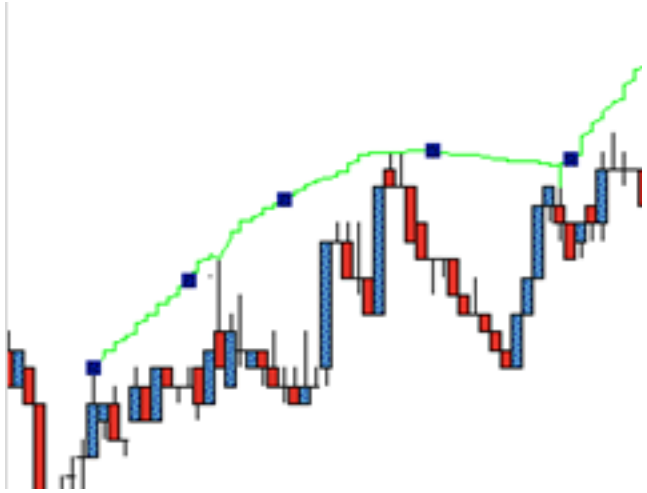
When you suspect that a pattern, such as head and shoulders, is emerging, you can verify your assumptions with **Multi-line**. This creates a continuous line that plots the highs and lows of market movements. Click in the chart to plot out points around a trend and double-click to finalise the drawing.

PARALLEL LINE

If you already have a trend line in the chart, you can select **Parallel Line** to create multiple parallel trend lines. When **Parallel Line** is active, click on the line you want to duplicate. Click again on the line and drag it to a new position.

CIRCLE

You can draw a circle around a particular price movement in the chart. Click on the highest price point you want the circle to reach in the chart and drag to size the circle.



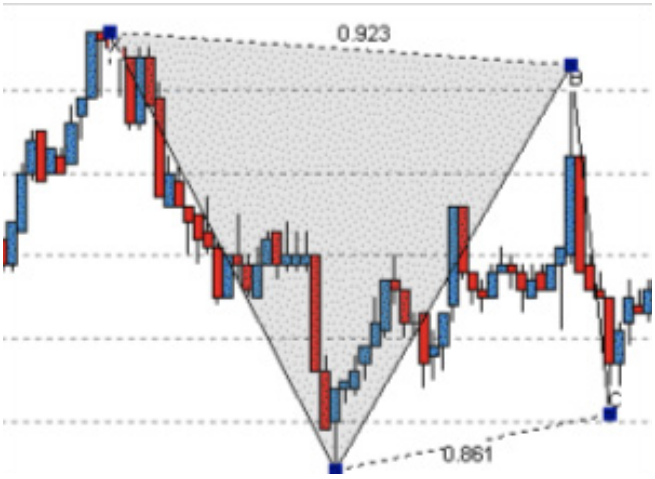
FREEHAND CURVE

You can use the freehand curve to map out patterns, such as a double-top or double-bottom. Click and drag your cursor. You can then click and drag on the points in the line to adjust them

IronFX Global is authorised and regulated by FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID Member of Eurex Exchange

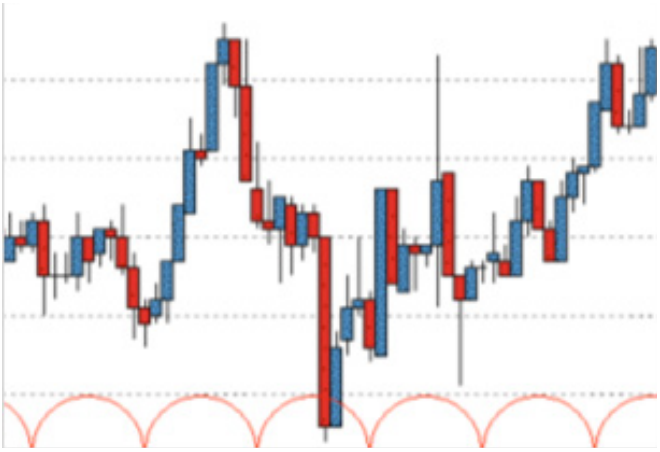
ABCD PATTERN

You can quickly map an ABCD pattern in the chart and identify potential buying and selling opportunities. To draw, click where you want the A point of your ABCD line to begin and then click your B and C points. IronFX Multi-Asset Trader automatically generates the point D.



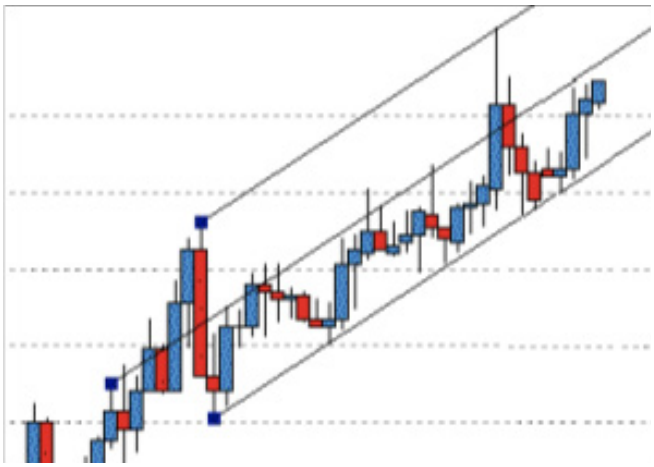
GARTLEY

Like the ABCD pattern, the Gartley maps four consecutive price swings and helps you forecast when to enter a short (sell) position or exit a long (buy) position. When active, click to place your X point to begin and then click your A, B, C and D points.



CYCLE

You can add a cycle line next to the price pattern movements. Click this button and the cycle appears on the chart.



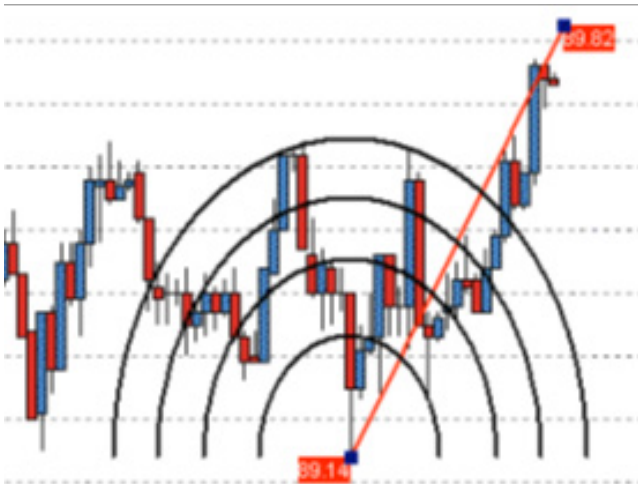
ANDREW'S PITCHFORK

If you suspect that a channel trend is forming around price movements in the chart, you can verify your assumptions by drawing an Andrew's pitchfork. Click where the A, B and C points should be.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

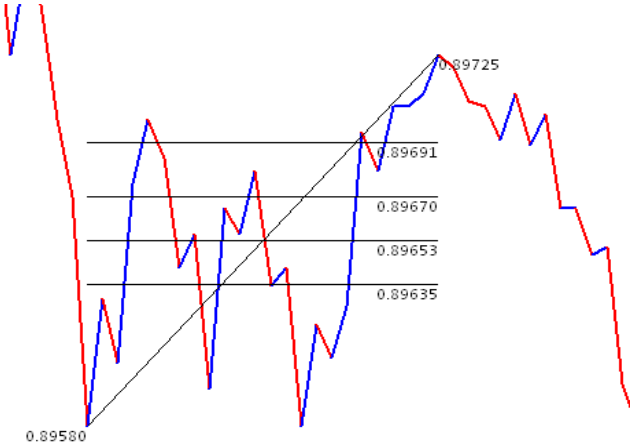
USING THE FIBONACCI DRAWING TOOLS

There are four different Fibonacci drawing tools that you can use to try to detect more complex patterns.



FIBONACCI ARC

You can use this to forecast support and resistance levels. To draw the arc, click where you want the centre of your arc to be and drag to size the arcs.

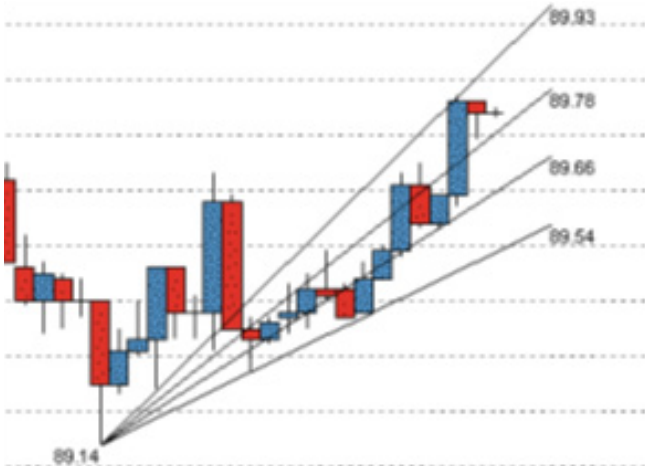


FIBONACCI RETRACEMENT

When a severe drop or rise occurs, you can use a Fibonacci retracement to forecast where stops or losses may be placed. To draw this, click and drag a line between the high and the low.

FIBONACCI TIME RETRACEMENTS

You can use this to forecast possible times when the market may experience a significant amount of movement. To draw this, click and drag to create a line.



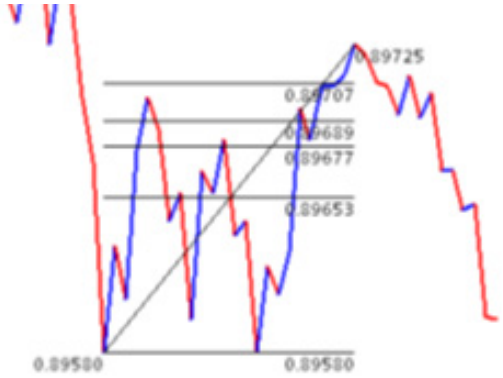
FIBONACCI FAN

You can use this to forecast support levels or a possible descending trend. To draw this, click and drag to create a line between the high and the low.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

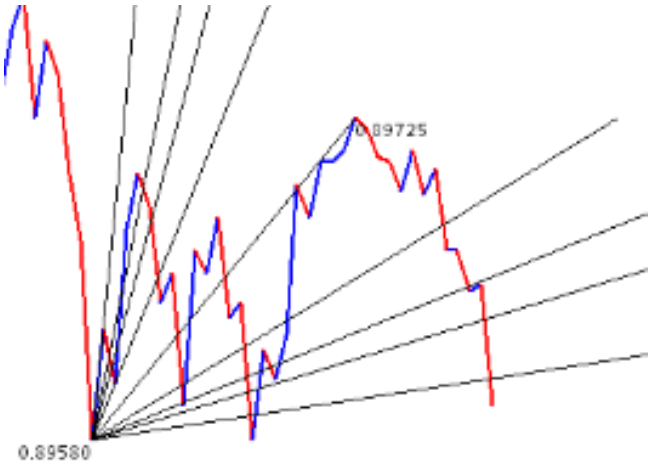
USING THE GANN DRAWING TOOLS

Gann drawings use 45 degree angles to show the interrelation between time and price. You can use three different Gann drawing tools in IronFX Multi-Asset Trader.



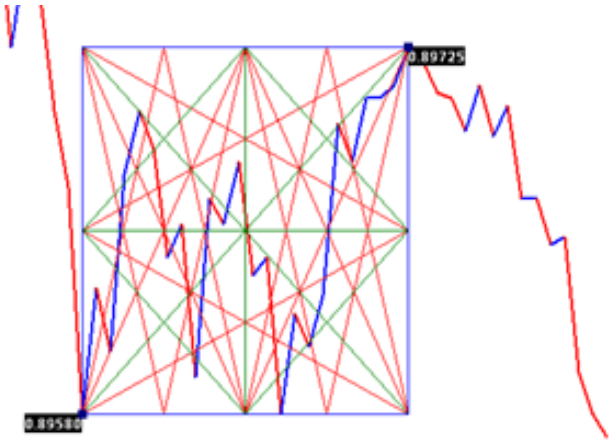
GANN RETRACEMENT

When a severe drop or rise occurs, you can use a Gann retracement to forecast where stops or losses may be placed. To draw this, click and drag a line between the high and the low.



GANN FAN

You can use the Gann Fan to determine if market movements are changing direction. To draw this, click and drag to create a line between the high and the low.



GANN BOX

You can use the Gann box to draw a box that contains a number of connecting lines. When you draw the box between a high and low point, you can use the lines to plot possible support and resistance lines.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

USING THE DINAPOLI DRAWING TOOLS

DiNapoli Levels, also called D-Levels™, use a combination of indicators, drawing tools and pattern-recognition instruments. When used according to DiNapoli's theories, they may help you forecast market moves.

You can use several different DiNapoli drawing tools in IronFX Multi-Asset Trader.

- DiNapoli Expansion™
- DiNapoli Retracement™.
- DiNapoli MACD Predictor™
- DiNapoli Oscillator Predictor™
- DiNapoli MA 3 X 3™
- DiNapoli Preferred Stochastics™
- DiNapoli Detrended Oscillator

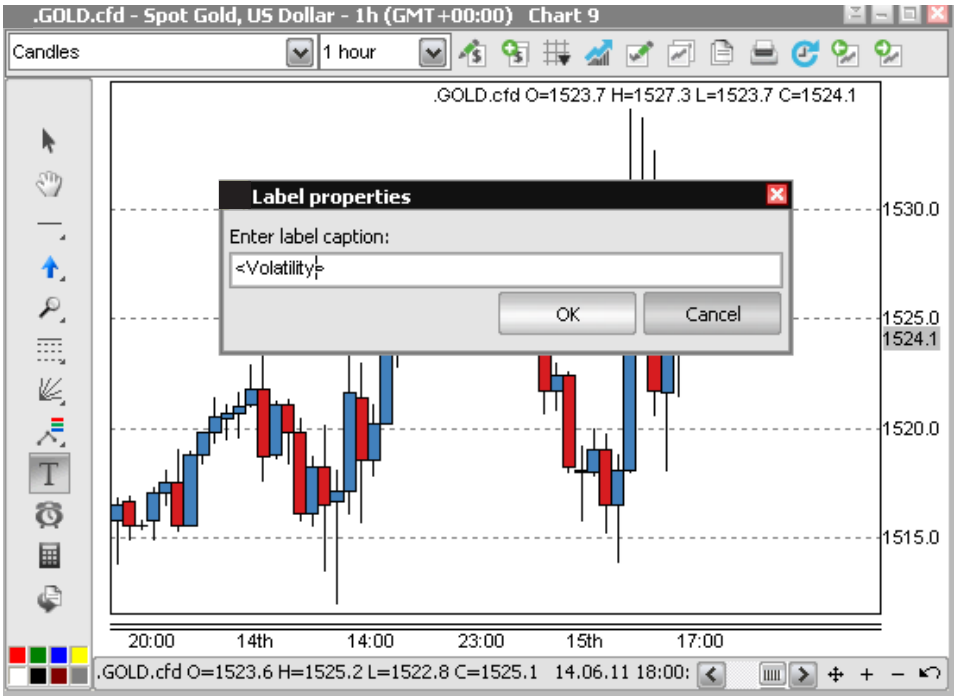
DiNapoli drawing tools follow a specific set of rules and the accuracy of these tools depends on how well you understand the principles of DiNapoli D-levels. You can view an introductory video for using these in IronFX Multi-Asset Trader when you sign up for a subscription. Click here to learn more about DiNapoli tools.

ADDING ARROWS TO THE CHART

You can add graphic arrows by clicking and then clicking in the chart window. You can add an arrow that points left, right, up or down.

ADDING TEXT TO THE CHART

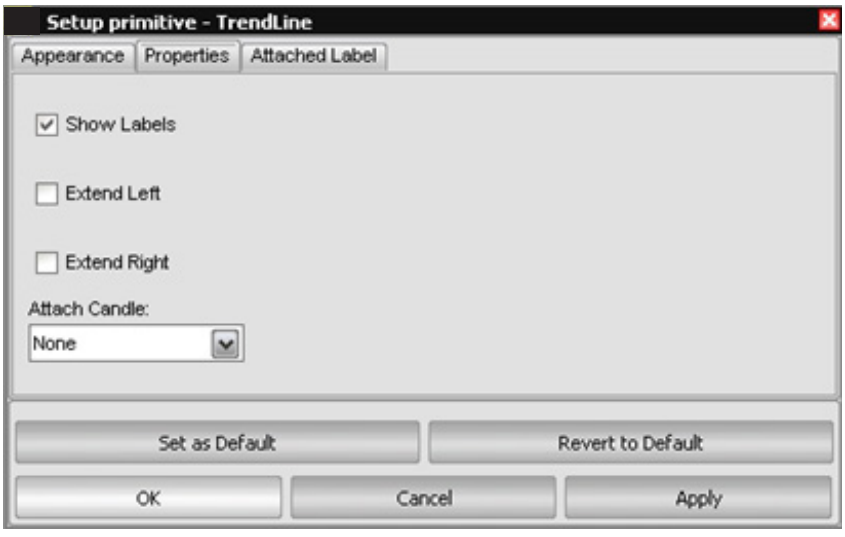
You can add a label to the chart by clicking T and clicking in the chart window. When the Label Properties window appears, you can type in a label and click **OK.**



You can rename the label and change the style, size and colour of the label font by right-clicking on the label and selecting **Configure Text** to display the Setup Primitive window. You can also click **Remove Primitive** to remove the text.

CONFIGURING DRAWINGS IN THE CHART

After you add a drawing to the chart window, you can change its appearance and properties as well as add a label to it by double-clicking on the drawing. This displays the Setup Primitive window.



You can enter specifications for the drawing tools on three tabs.

- The **Appearance** tab contains settings where you can specify the colour, style and width of the selected drawing.
- The **Properties** tab includes options so you can specify label properties and choose to extend the lines in the drawing. For the Fibonacci, Gann and DiNapoli drawing tools, you can also use this tab to extend the number series used to calculate the drawing.
- The **Attached Label** tab contains options for adding a custom label and specifying the background colour, font, and font colour of the label.

The features that you see on the tabs depend on the drawing tool that you selected. Not all tabs will appear with every tool.

If you make a mistake while entering drawing settings, you can click **Revert to Default** to restore all of your settings to the default. If you want all drawings to use the settings you just entered, you can click **Set as Default.**

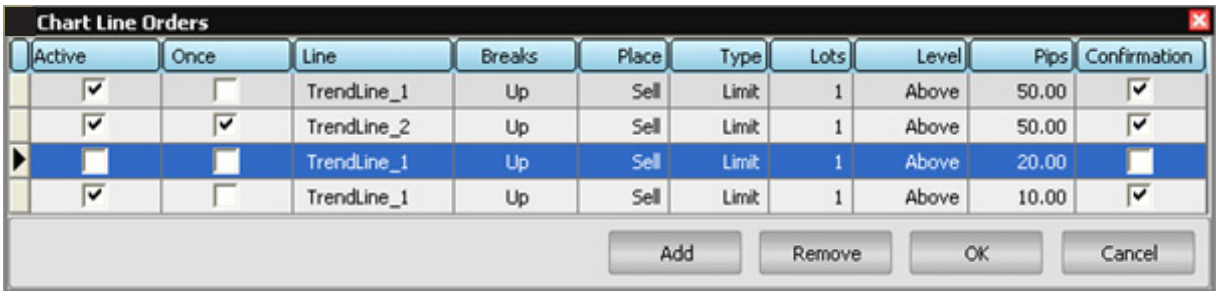
MANAGING DRAWINGS IN THE CHART WINDOW

You can add as many drawing objects as you want to the chart window. You can also use several commands to manage your drawings

- **Editing Drawings** - You can edit the appearance of a drawing by clicking on a point or endpoint and dragging it to a new position.
- **Removing Drawings** - You can delete individual drawings from the chart by clicking on the drawing and then right-clicking to select **Remove**… You can clear all drawings by right-clicking in the chart and clicking **Clear All Primitives.**
- **Hiding Drawings** - If you don't want to remove your drawings, but you want to get a clearer view of price movements in the chart, right-click in the chart and click **Hide All Primitives**. Display them again at any time by clicking **Show All Primitives.**

PLACING CHART LINE ORDERS

After you draw trend lines or Fibonacci retracements in the chart, you may see entry or exit points and want to place a trade. You can use the Chart Line Orders window to place orders based on when a price breaks above or below a trend line or Fibonacci retracement. To open the window, right-click in the chart and click **Chart Line Orders** from the drop-down menu.



The Chart Line Orders window displays your working order. You can specify your order settings by double-clicking on the column in the order row.

Active - Check this to make a chart line order active or inactive. If you don't want to execute a particular chart line order but want to save your settings, you can use this to keep your settings.

Line - Choose whether the order is based on the trend line or a Fibonacci retracement level. If multiple lines are available, the name will be followed by a number to help identify it.

Breaks - Specify the direction (either up or down) that the market needs to be moving to cross your chart line.

Place - Specify that this is either a **Buy** or **Sell** order.

Type - Use this to set the order type. You can choose to place a market, stop or limit order.

Lots - Enter the size for your order.

Pips - Specify the number of pips and fractional pips or points the current market price has to be for IronFX Multi-Asset Trader to fill your order. This is used with the Level option.

Level - Specify that you want the order to be filled when the current market price is above or below the drawing by the number of pips and fractional pips or points that you chose.

Once an active chart line order is placed, a small information icon will appear at the bottom of the chart

If you scroll over this icon, IronFX Multi-Asset Trader displays a message: "There are active chart line orders on this chart." Clicking on the icon will display the Chart Line Orders window..

Remove orders from the Chart Line Order window by clicking in the order row you want and clicking **Remove**.

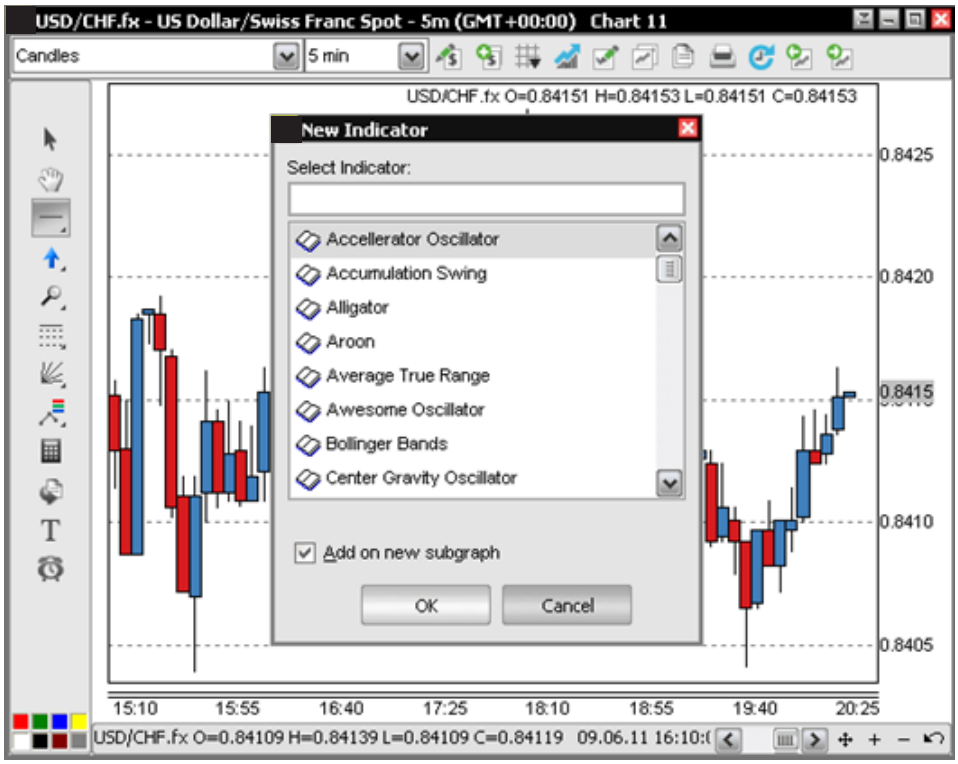
DISPLAYING INDICATORS IN THE CHART

Many traders use technical indicators to forecast where the market may be going. In IronFX Multi-Asset Trader, you can select up to 100 different technical indicators to appear in the chart window

When you select an indicator, it appears in the chart alongside the current price movements. You can also display the indicator in a special window that appears below the main chart.

ADDING AN INDICATOR TO THE CHART

You can add a single indicator to the chart or display it in the window below the chart using the **Add Studies**… menu option. This displays the New Indicator window.



Once selected, the indicator is displayed in the chart and a settings window appears.

The settings window will have the same name as the indicator and display specific settings for that indicator.

The Input tab displays settings so you can configure your indicator. The Style tab displays settings so you can change the appearance of the indicator in the chart.

You can specify settings to appear every time you select an indicator. See Specifying Indicator Settings on the Charting Tab.

ADDING AN INDICATOR TO THE CHART:

1. Right-click in the chart and click on the Add Studies… menu option.
2. Enter the first few letters of the indicator name in the text box at the top of the window or scroll through the list and then click on the indicator to select it.
3. Check or uncheck the Add on New Subgraph checkbox, if desired.
4. Click OK.
5. Adjust the settings in the Inputs tab as desired.
6. Click the Style tab and change the settings, as desired.
7. Click Apply.
8. When done, click OK.

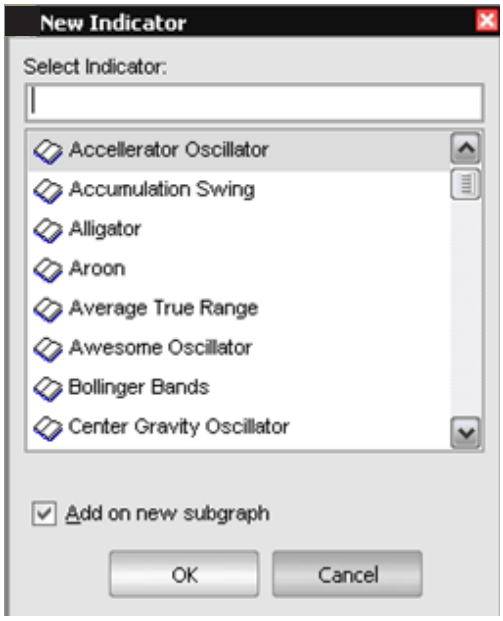
You can remove an indicator or close the window that appears below the main chart by right-clicking on the indicator and selecting **Remove**… from the drop-down menu.

ADDING MULTIPLE INDICATORS TO THE CHART

When you want to add multiple indicators to the chart, click to open the Chart Indicators window.

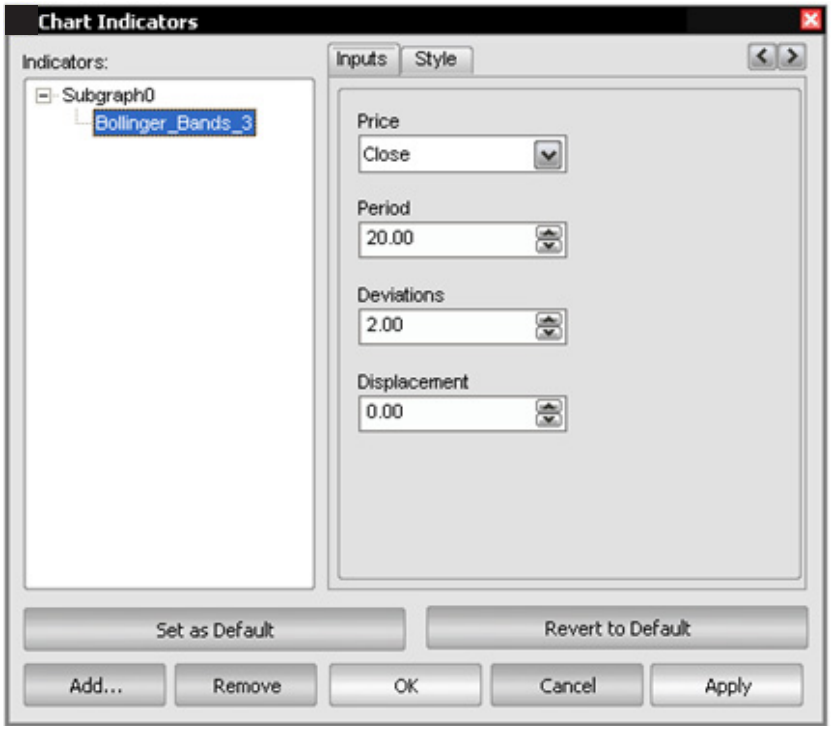
This is how the Chart Indicators window would appear if you opened it for the first time.

You can add chart indicators by clicking **Add**… This displays the New Indicator window.



You'll need to add one indicator at a time. If you click **Add on New Subgraph** when you select an indicator and click **OK**, the Chart Indicators window adds a graph called Subgraph1. Subgraph 0 refers to the main chart in the chart window. The indicator will appear in a special window below the main chart.

Once added, you can select the indicator in the Indicators list and specify settings.



Once added, you can continue to click **Add**... and select additional indicators.

ADDING MULTIPLE INDICATORS TO THE CHART:

1. In the chart, click .

2. Click Add.... The New Indicator window appears.
3. Enter the first few letters of the indicator name in the text box at the top of the window or scroll through the list and then click on the indicator to select it.
4. Check or uncheck the Add on New Subgraph checkbox, if desired.
5. Click OK.
6. Click on the indicator name in the Indicators list and adjust the settings in the Inputs tab as desired.
7. Click the Style tab and change the settings, as desired.
8. Click Apply.
9. Continue to add indicators and modify their settings.
10. When done, click OK.

EDITING INDICATORS IN THE CHART

Once an indicator is applied to the chart, you may need to further modify its settings. You can edit a single indicator by double-clicking on it to display its individual settings window.

The settings window will have the same name as the indicator and display specific settings for that indicator.

If you want to edit multiple indicators, you can also click to open the Chart Indicators window.

EDITING MULTIPLE INDICATORS IN THE CHART:

1. In the chart, click .
2. Click on the indicator name in the Indicators list.
3. Adjust the settings in the Inputs tab as desired.
4. Click the Style tab and change the settings, as desired.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

5. Click Apply.
6. Continue to modify the settings of the displayed indicators.
7. When done, click OK.

You can use to move back and forth between the indicators that appear in the Indicators list.

SETTING INDICATORS FOR ALL CHARTS

If you set an indicator in a chart and then switch instruments, you will need to add the indicator and specify its settings again. If you want all charts to display the indicators you selected, however, you can set an indicator as default.

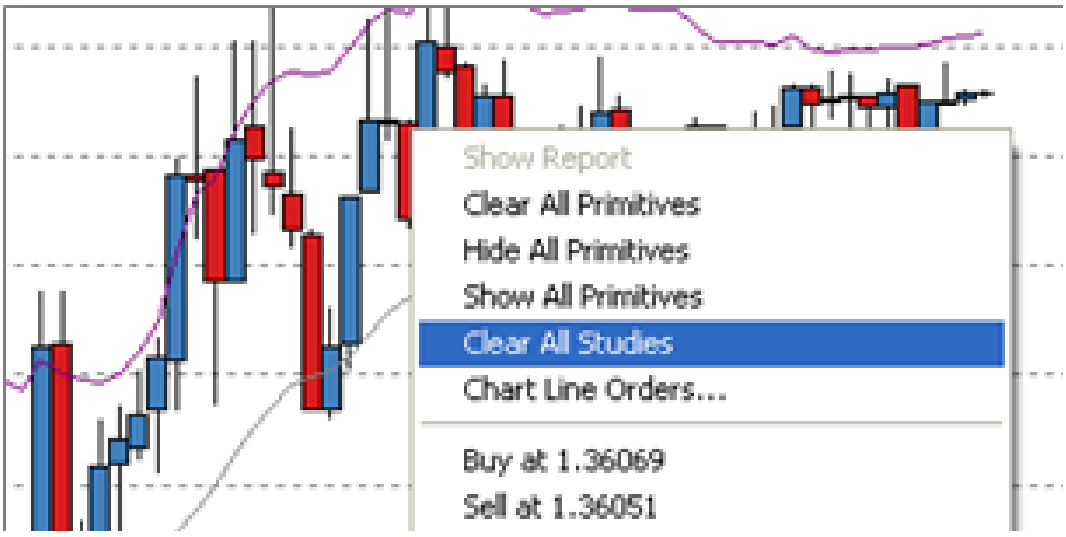
- If you add a single indicator to the chart window, you can click **Set as Default** after you configure your indicator in the settings window.
- If you add multiple indicators, you can select the indicator you want and click **Set as Default**.

If you set indicators in a linked chart, the indicators remain displayed as you click on instruments in the Quote Board.

REMOVING MULTIPLE INDICATORS IN THE CHART

You can remove multiple chart indicators at once in the Chart Indicators window. Click to open this window, select the indicator you want, and click Remove.

You can also remove all indicators at once by right-clicking in the chart and selecting **Clear All Studies** from the drop-down menu. This also removes the indicators you set as default from all charts.



EDITING ORDERS FROM THE CHART

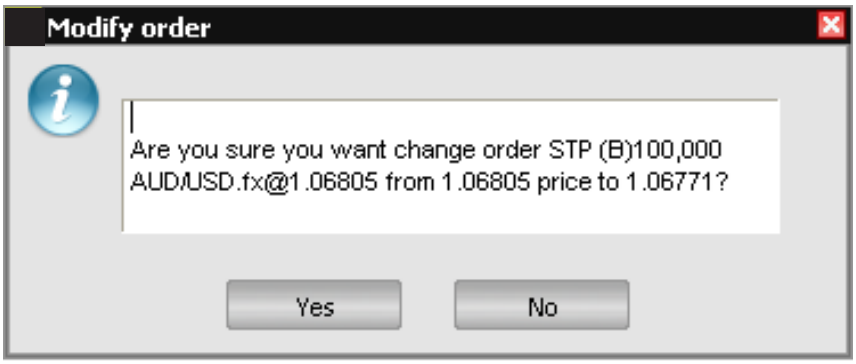
When you have open positions or working orders, IronFX Multi-Asset Trader displays these in the chart.

Your working order appears as a red dashed line. Open positions appears as a yellow dashed line.

You cannot edit open positions, only working orders. For more information on what an open position or working order is, see Managing Open Positions or Managing Working Orders

A label appears above all position or order lines in the chart. If you edit the stop or limit order, you may need to adjust the positions of the displayed labels. To do this, right-click in the chart and click **Reset Label Positions** in the drop-down menu.

When you need to modify working orders quickly, you can click on the red dashed line and drag it to a new position. You can verify the new price in the Modify Order confirmation window.



If you want to change your working order by entering a specific price, you can click and double-click on the line you want to open that order in the Edit Order window.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

The drop-down menus in the Edit Order window are already set with the selected instrument and order type, so you can edit the price and order size for your working order quickly.

EDITING WORKING ORDERS FROM THE CHARTS:

1. In the chart, double-click on the desired working order.
2. In the Edit Order window, adjust the price.
3. If you are editing a stop, you can select the **Trailing** checkbox and enter whole or fractional a number in the **Pips** or **Points** text box.
4. Use the to adjust the size of your trade, if desired. You can also click the buttons in the **Quick Lots** or **Quick Stake** section.
5. Click OK.

SETTING ALARMS

When you have a chart window open, you can set alarms to notify you when the selected instrument has either reached a specific price or crossed an indicator trend line. If you are logged out of IronFX Multi-Asset Trader, you can also choose to have the application send you an email or a SMS notification to notify you.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

The Gold chart with an alarm set at 1532.7. When you first open the chart, the alarm line colour appears in green.

You must enter your email address and/or mobile number into IronFX Multi-Asset Trader in order for the program to send you an email or SMS alert. See Entering Email and Phone Numbers in the User Details Tab.

You can specify settings for the Alarms in the Chart Properties window and the Configure Parameters window. See Specifying Alarm Settings for the Chart on the Alarms Tab and Specifying Alarm Notification Settings in the Alarms Tab.

ADDING PRICE ALARMS

You can click in the toolbar of the chart window to create an alert that notifies you when the market reaches a specific price. This opens the Create Alarm window.

After you click **OK**, the alarm is set and a line, representing the price alarm, appears in the chart. If you want to modify the alarm, you can double-click on its line to open the Edit Alarm window or you can click and drag the line to reposition it.

There are two other ways you can set a price alarm. First, you can right-click in the chart and select **Set Alarm At**… Or, you can open the Alarms window by clicking **Alarms** from the **View** menu and selecting . Both of these display the Create Alarm window.

VIEWING THE ALARMS WINDOW

If you have multiple alarms over several charts, you can view them all in the Alarms window. You can also use this to add alarms, make changes to existing alarms, deactivate alarms or remove alarms from the chart window.

You can open the Alarm window by selecting Alarms under the View menu in the toolbar.
The toolbar at the top of the window contains five icons.

Creates a new alarm.

Opens the Edit Alarm window. You can edit an alarm by selecting the alarm row and then clicking this icon.

Removes the selected alarm from the window. You need to select the alarm row and then click this icon to remove the alarm.

Removes all alarms in the window.

Removes all activated alarms in the window.

You can also open the Edit Alarm window by double-clicking the alarm row.

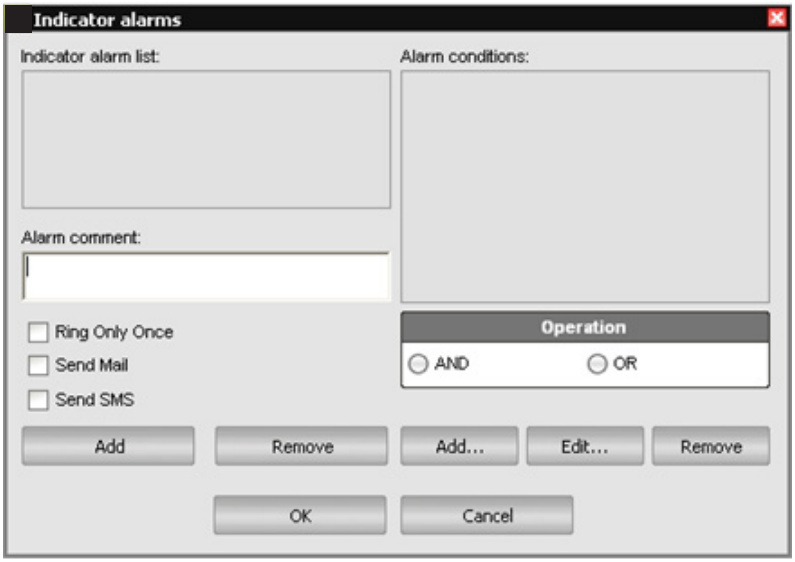
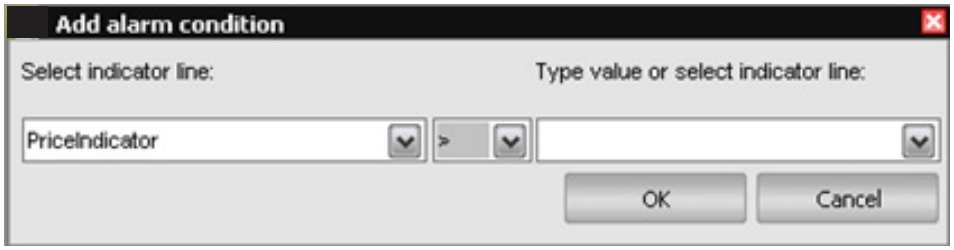
MANAGING INDICATOR ALARMS

In the toolbar of the chart window, you can click to set alarms to notify you when the market has crossed one of your indicator levels. This opens the Indicator Alarms window.



You can set your alarms in the Indicator Alarms window. When you click **Add** to create an alarm, you can click **Add**… to enter conditions about the alarm.

Depending on the indicators displayed, you can choose to have IronFX Multi-Asset Trader alert you when either the price or indicator settings are < (less than), > (greater than), or == (equal to each other).



When your alarms are set, the Indicator icon appears in the lower right corner of the chart window, letting you know that your alarm is set. This remains displayed in the corner until your alarms are reached. If you need to edit an alarm, you can double-click on this icon to open the Indicator Alarms window.

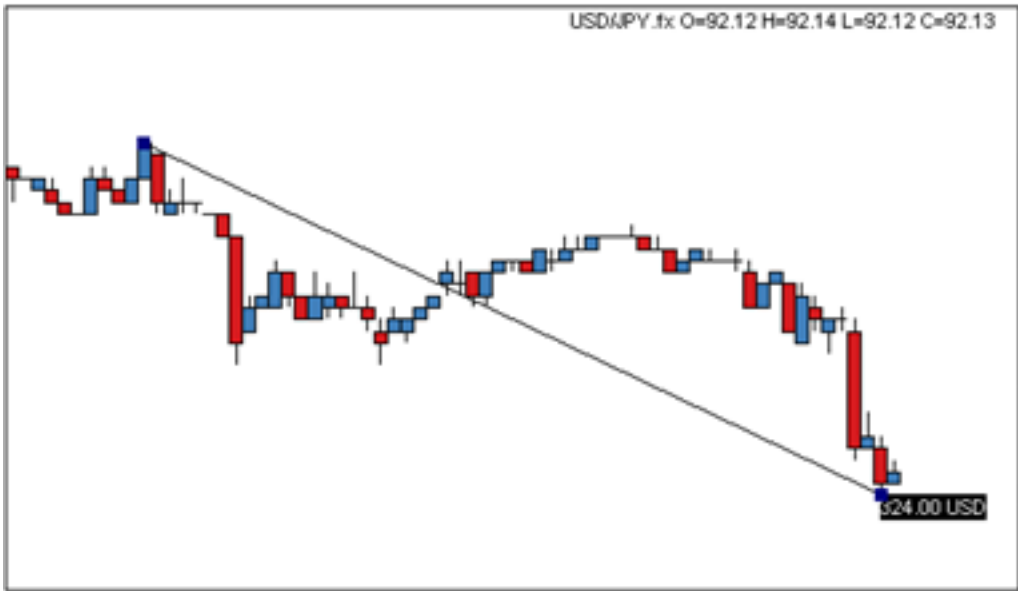
SETTING INDICATOR ALARMS:

1. In the chart, click .
2. Click **Add** on the left side of the window.
3. Click **Add**... under the Alarm Conditions section.
4. Click on the **Indicator** drop-down menu and click on an indicator type to select it.

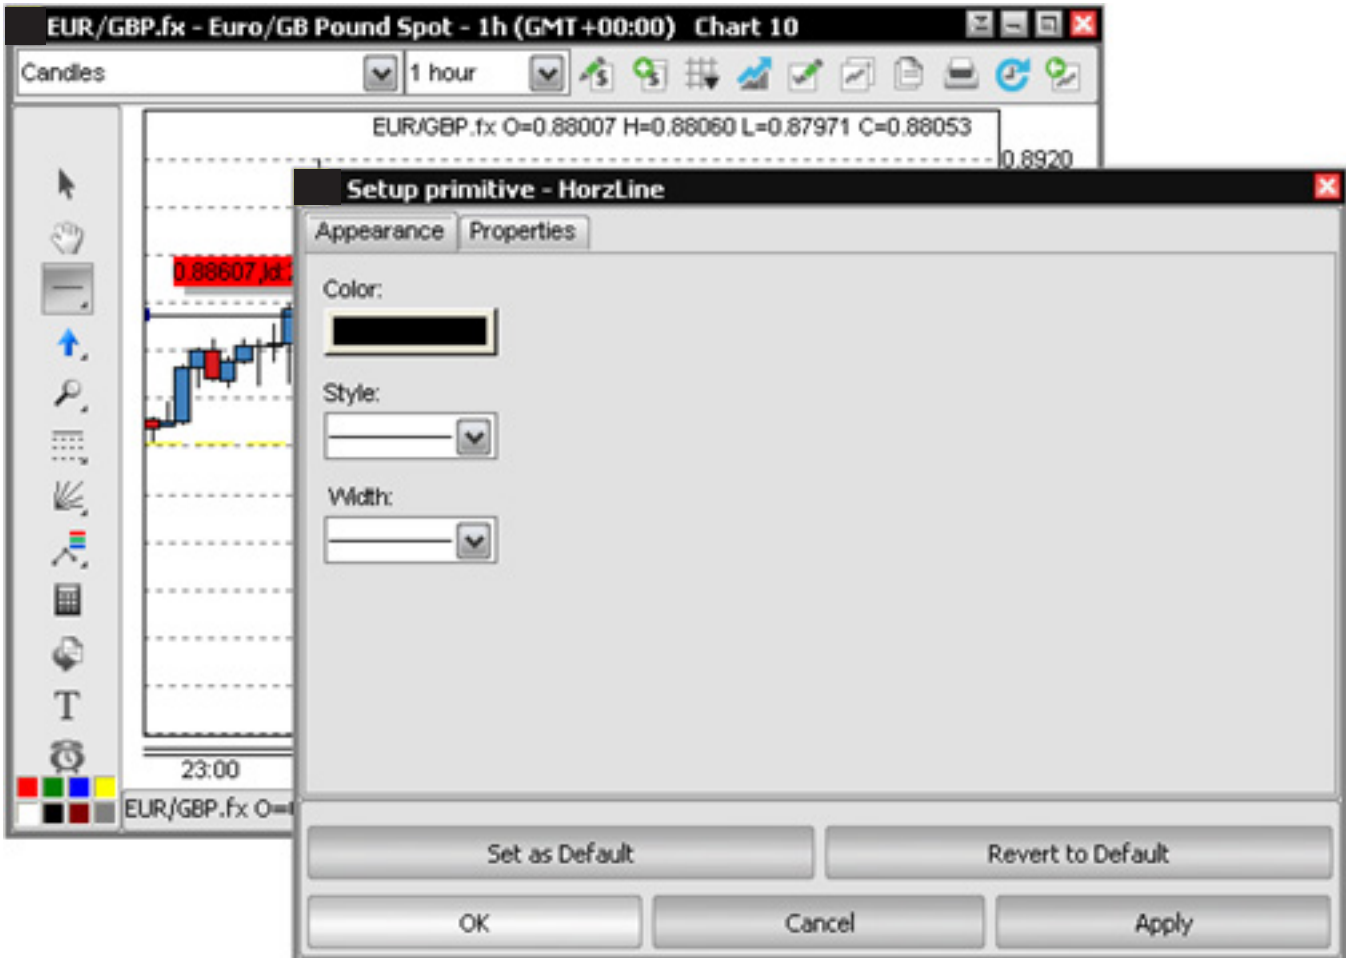
5. Click the **Condition** drop-down menu and select <,>, <=, >=, or =.
6. Enter a value or select another indicator from the drop-down menu.
7. Click **OK**.
8. If desired, click **Add**... again and set another specification.
9. Select **AND** or **OR**.
10. If desired, specify if you want to be alerted by text message or email.
11. Click **OK**.

USING THE VALUE CALCULATOR

You can calculate the value of a gradual rise or fall in the chart window by clicking . Simply click where you want your line to begin and drag your cursor to the high or low point. IronFX Multi-Asset Trader displays the value of the rise or drop.



You can change the appearance of the line and its label as well as select a different base currency and size by double-clicking on the line. This opens the Setup Value Calculator window.



You can enter specifications for the Value Calculator on three tabs.

The **Appearance** tab contains settings where you can specify the colour, style and width of the selected drawing.

The **Properties** tab includes options so you can specify label properties, set the size and change the base currency.

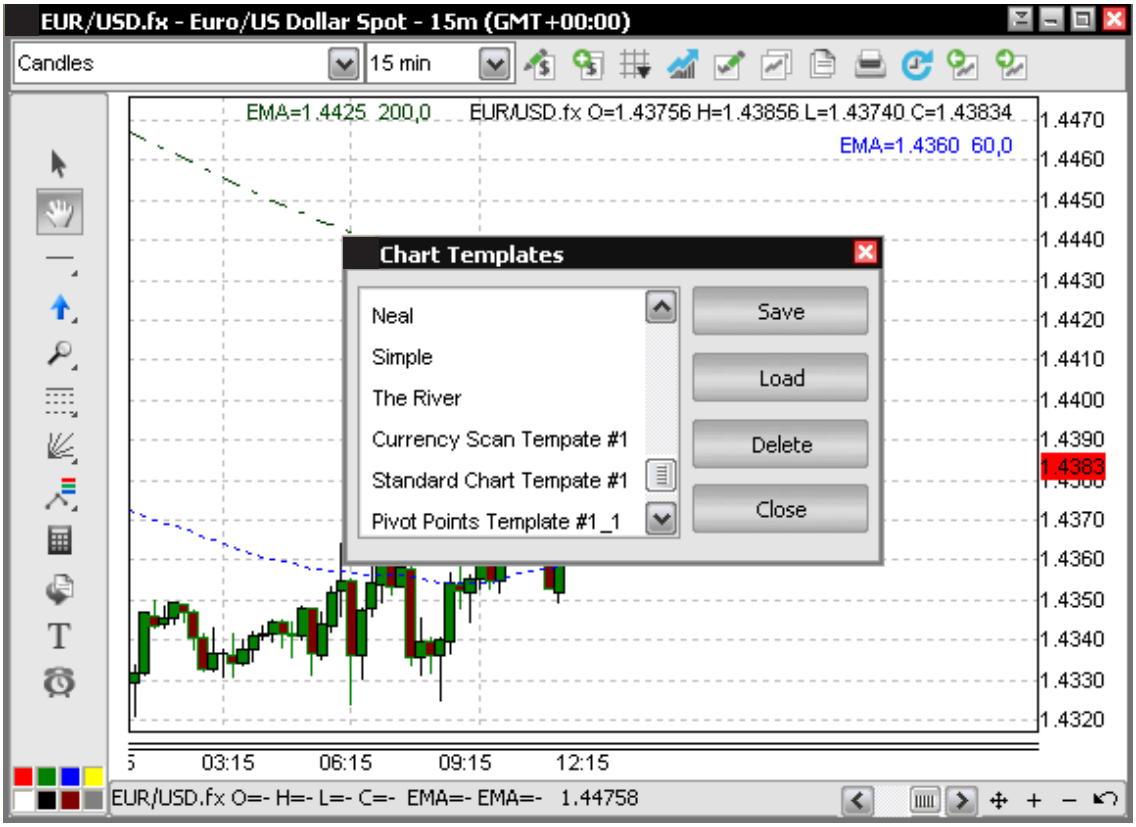
The **Attached Label** tab contains options for adding a custom label and specifying the background colour, font, and font colour of the label.

When you open IronFX Multi-Asset Trader for the first time, the Value Calculator line includes a label that displays the value of the drop or rise in your selected base currency and the current trade size in your account.

If you make a mistake while entering the Value Calculator settings, you can click **Revert to Default** to restore all of your settings to the default. If you want the Value Calculator to use the settings you just entered, you can click **Set as Default.**

USING CHART TEMPLATES

If you like how you've set up the chart type and time frame with the indicators you selected, you can choose to save the chart settings as a template so you can load the template when you need it.



The EUR/USD with the Pivot Points #1 template selected.

Saving a Template:

1. In the chart, click . The Chart Template window appears.
2. Click **Save**.
3. Enter the template name and click **OK**.
4. Click **Close**.

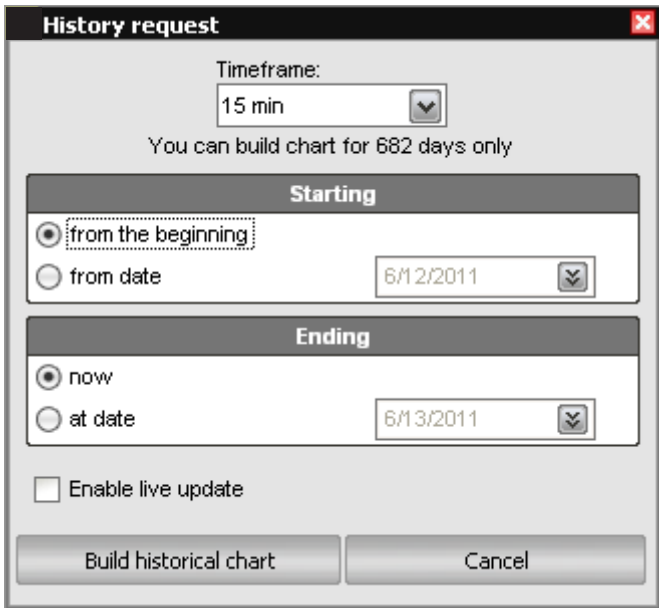
Loading a Template:

1. Make sure the Chart Template window is open.
2. Scroll through the list of templates and click on the one you want to select.
3. Click **Load**.
4. Click **Close**.

You can also delete a template by clicking on the one you want to select it and then clicking Delete.

CREATING A CHART HISTORY

You can build a chart history for all available chart time frames by clicking to display the History Request window.



The **Timeframe** drop-down menu lets you select the time frame for the charts.

In the Starting section, you can enter the point at which you want the history to start. This can be a specific date or as far back as 45 days ago.

In the Ending section, you can enter the ending for the history. This can be a specific date or up to present time.

If you select the **Enable Live Update** checkbox, current quotes will also be added to the historical chart. Otherwise, the chart will only show the quotes for the select time period.

Once generated, you can scroll through the chart history as desired. You can also click to print the chart.

If you select **From Date** or **At Date**, you can click to view a month calendar and select dates from that. The current date is circled in red.

Creating a Chart History:

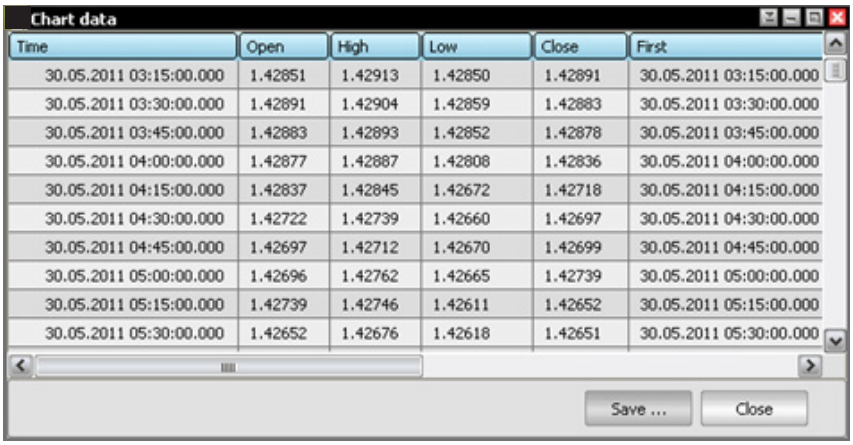
1. In the chart, click .
2. Click and select a time frame from the **Timeframe** drop-down menu.
3. Select an option in the Starting section. If you select **From Date**, select a date or click to select a date.
4. Select an option in the Ending section. If you select **At Date**, select a date or click to select a date.
5. If desired, click the checkbox next to **Enable Live Update**.
6. Click **Build Historical Chart**.

IronFX Multi-Asset Trader generates the chart history from data stored on the server. Because of this, it may take IronFX Multi-Asset Trader a few moments to generate the history.

EXPORTING CHART DATA

In addition to printing, you can also export the price movements in the chart as a text data file for your own personal analysis by clicking in the left toolbar. This opens the Select Export Options window.

You'll use this select the date and other information you want. When you click **OK**, the information appears in the Chart Data window.



EXPORTING CHART DATA:

1. In the chart, click in the top toolbar.
2. In the Select Export Options window, make the selections you want.
3. Click **OK**.
4. When the Chart Data window appears, click **Save**.
5. Navigate to the folder you want and click **Save**.
6. When done, click **Close**.

SECTION 4: TRADING SPREAD BET & CFD OPTIONS

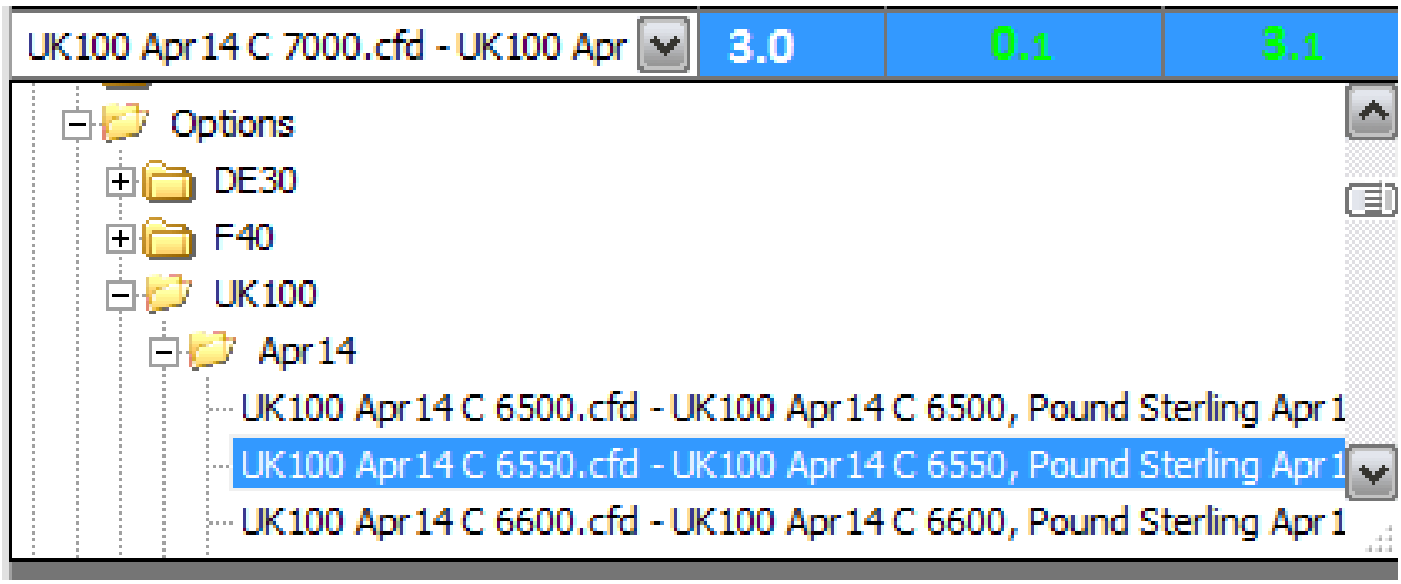
Spread bet and CFD options are traded within IronFX Multi-Asset Trader in a similar fashion to spread bets or CFDs.

This guide assumes that you are familiar with trading options. If you are new to options or wish to brush up on your options knowledge, visit IRONFX's options page for example trades and reference materials.

In IronFX Multi-Asset Trader, FX options are traded differently to spread bet or CFD options. For more information, see the Trading FX Options section of this manual.

SPREAD BET AND CFD OPTIONS IN THE QUOTE BOARD

You can add options instruments to the Quote Board by right-clicking on the Quote Board and selecting "Insert Instrument." Navigate within the folders to find the desired underlying market, expiration, option type, and strike.



UK100 Apr 14 C 7000.cfd - UK100 Apr

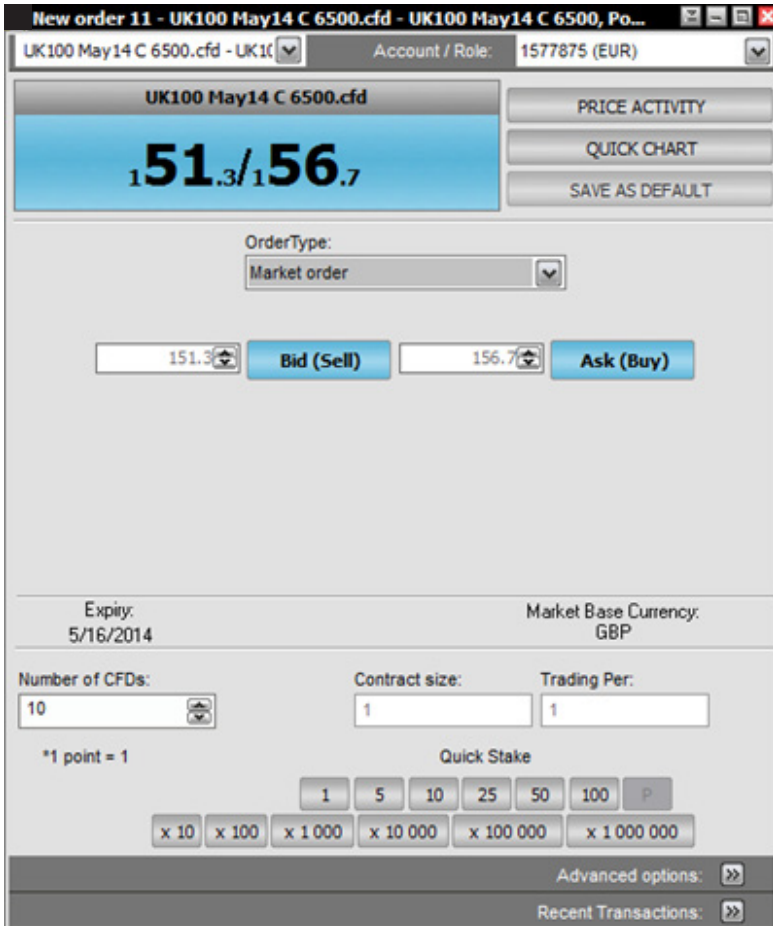
OPENING A SPREAD BET OR CFD POSITION

You open spread bet and CFD option positions in the same manner as regular spread bet or CFD positions. Double-click on the instrument in the Quote Board to bring up the New Order Window.



Spread bet and CFD option positions will appear in the Working Orders Window and Open Position Window.

Symbol	Operation	Size	Traded	Last	P/L	Margin	Ticket Id	Time of Trade
DE30 Apr14 P 9100.sb	Sell	10 GBP	34.600	34.0	6.00	~	23384155	11/04/2014 11:49:47
DE30 Jun14 C 10000.sb	Buy	10 GBP	33.200	32.4	-8.00	~	23408393	14/04/2014 09:38:33
DE30 Jun14 C 10600.sb	Sell	10 GBP	0.200	3.4	-32.00	~	23408394	14/04/2014 09:38:37

Important: Margin for portfolios containing more than one option position within the same underlying market or an option position and underlying position will show individual margins of "~". This is because the margin calculation takes into account movements in the underlying price ('net delta margin') and volatility ('net vega margin'). Therefore it is not possible to show a single margin number for each individual option position. For more information, see the margin calculations in the example sheets on the IRONFX Markets options page.

SECTION 5: TRADING FX OPTIONS

Unlike spread bet and CFD options, FX options have their own quote board in IronFX Multi-Asset Trader. You can trade options 24-hours a day, 5.5 days per week. The options features in IronFX Multi-Asset Trader help traders choose which options best fit their trading style and market outlook.

To access the FX options functionality in IronFX Multi-Asset Trader, you'll need to sign up for an account. For more information, contact a IRONFX account executive.

This guide assumes that you are familiar with trading FX options. If you're new to FX options or simply want to brush up on your options knowledge, see IRONFX's FX Options in IronFX Multi-Asset Trader: A Quick Reference Guide for more information.

LOADING FX OPTIONS LAYOUT

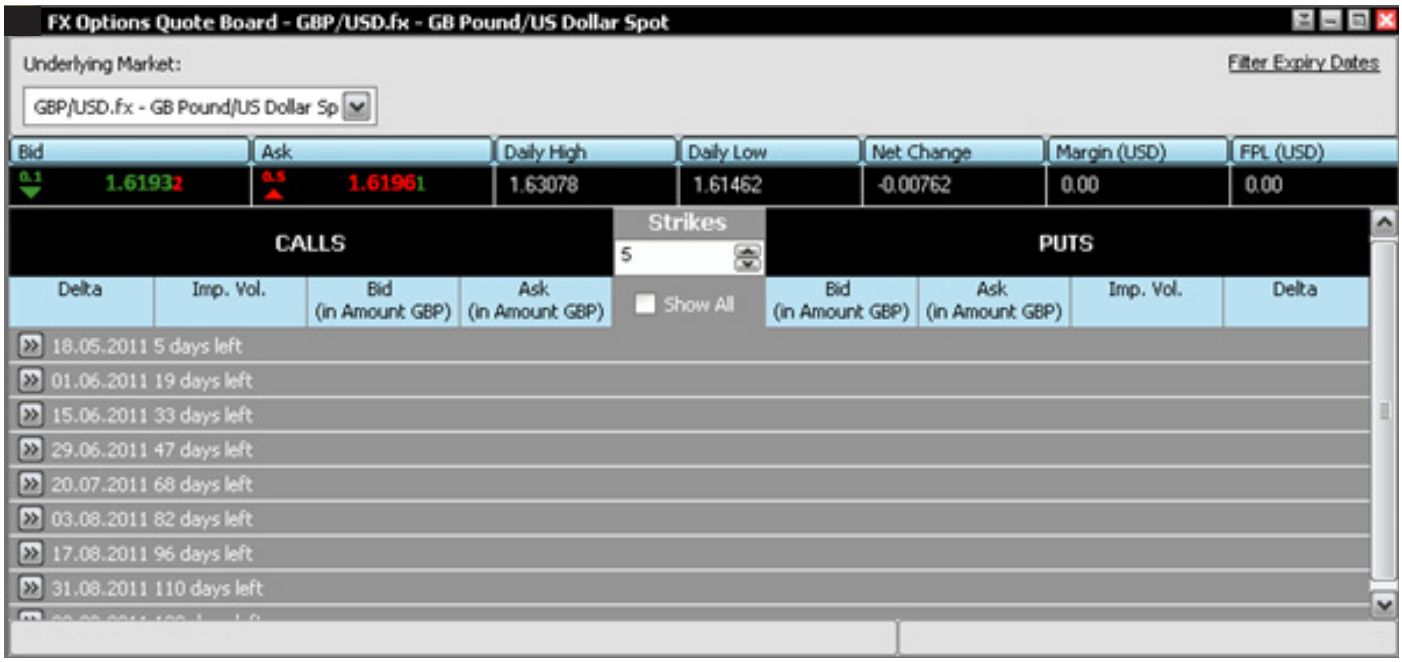
If you are trading solely on FX options, IRONFX has created two specific layouts for IronFX Multi-Asset users.

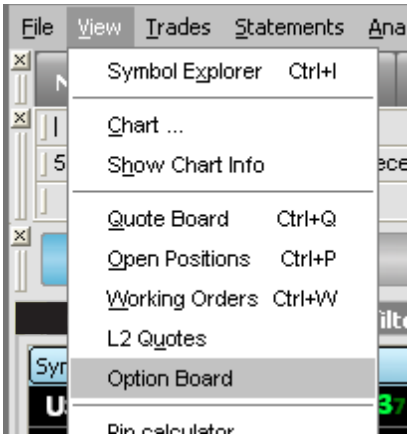
- FXO1 Layout is for anyone trading on a computer that has a single monitor.
- FXO2 Layout is for anyone trading a machine that is attached to multiple monitors.

For more information on how to select a different layout, see Displaying a Layout.

OPENING THE FX OPTIONS QUOTE BOARD

When IronFX Multi-Asset Trader is open, you can start trading options by clicking the **View** menu and selecting the **Option Board**. This displays the FX Options Quote Board which displays a number of strike prices and expiration dates for the selected currency pair.





When you first open the FX Options Quote Board, a currency pair is automatically selected in the **Underlying Market** drop-down menu. You can change the displayed currency pair by clicking and selecting one from the drop-down menu.

Once selected, you can see the current market price for that currency pair in the Underlying bar. This appears at the top of the FX Options Quote Board and displays the pricing information of the selected currency pair as well as your current margin and floating P/L. Below that, you can view a list of expiry dates for that currency pair.

FX Options Quote Board - GBP/USD.fx - G
Underlying Market:
GBP/USD.fx - GB Pound/US Dollar Sp
EUR/CHF.fx - Euro/Swiss Franc Spot
EUR/USD.fx - Euro/US Dollar Spot
GBP/CHF.fx - GB Pound/Swiss Franc Spot
GBP/USD.fx - GB Pound/US Dollar Spot
USD/CHF.fx - US Dollar/Swiss Franc Spot
USD/JPY.fx - US Dollar/Japanese Yen Spot
USD/MXN.fx - US Dollar/Mexican Peso Spot

When you open a forex position in the selected currency pair, the Underlying bar changes colours, depending on whether the market is higher or lower than your entry point and whether you have a positive or negative P/L.

You can place a forex market order by clicking on the price in the **Bid** or **Ask** columns. This opens the New Order window for placing forex trades.

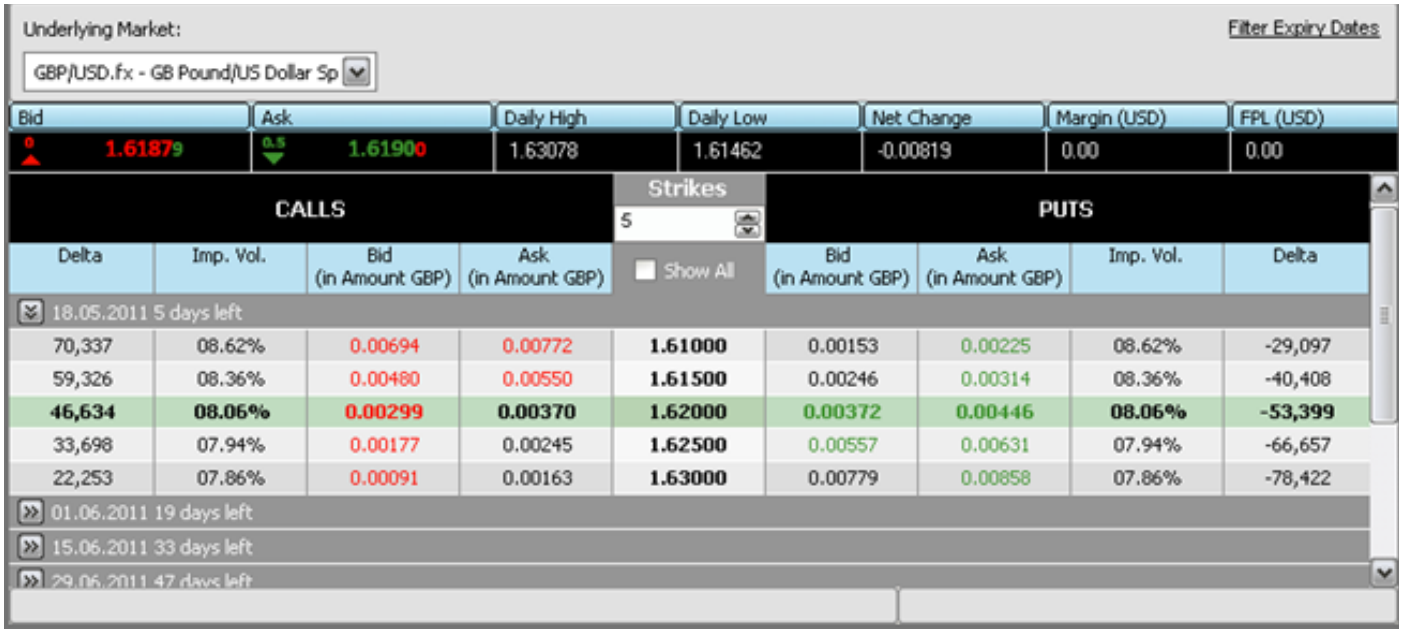
Once the currency pair that you want is selected, the FX Options Quote Board displays a list of option expiry dates for that currency pair. When you click next to the expiration date you want, Multi-Asset displays an option chain, which displays several strike prices, the implied volatility and Delta for a particular strike, and the bid and ask prices for call or put options for each strike. To hide the displayed option chain, click .

You can also display all available option chains by right-clicking in the FX Options Quote Board and selecting **Expand All** from the drop-down menu. To hide all option chains, right-click in the FX Options Quote Board and select **Collapse All** from the drop-down menu.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

VIEWING THE OPTION CHAIN

Once you display the FX option chain for a particular currency pair, you can view strike prices, the implied volatility, the Delta for a particular option, and the bid and ask prices for call or put options for each strike.



The Option Board is divided into two sections. The Calls section displays the bid and ask prices to trade a call while the Puts section displays the bid and ask prices to trade a put.

Values in green text mean the last movement of the market was higher, while values in red text mean the last movement of the market was lower. The highlighted row shows which strike price is at-the-money.

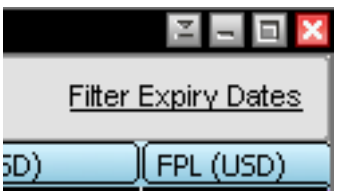
The Strikes column in the middle shows the price at which you exercise the option; the strike is the specific price in the option contract that your forex position would be opened at on the expiry if your option had value.

You can use the Strikes field to increase or reduce the number of strikes you see. To see all available strikes, click the **Show All** checkbox.

You can customise the appearance of the FX Option Quote Board by right-clicking on it and selecting Configure… from the drop-down menu. You can then use the Configure Option Quote Board window to display additional columns in the Underlying Markets row or Option Chain table, change the colours or font styles, or select the pricing convention you want to see in the window.

FILTERING THE OPTION CHAIN

You can determine which expiry dates or strike prices appear in the FX Options Quote Board by clicking the **Filter Expiry Dates**. This opens the Option Board Filter window.



You can also open the Option Board Filter window by right-clicking in the FX Options Quote Board and selecting **Filter**… from the drop-down menu.

The Option Board Filter window contains two tabs. On the Expirations tab, you can choose the expiration dates that you want to view by clicking the checkbox next to the date. You can use the **Select All** or **Select None** buttons on the right side of the Choose Expirations section to simplify your selection process.

In the Select Format section, you can select the way you want to view the dates (**DD.MM.YYYY** or **MM.DD.YYYY**). If you want to view how many days are left on an option in the FX Option Quote Board, you can check the **Add Days Left** checkbox.

On the Strike tab, you can choose the strikes that you want to view by clicking the checkbox next to the price. You can use the **Select All** or **Select None** buttons on the right side of the Choose Strikes section to simplify the selection process.

In the Maximum Number of Strikes to Display section, you can use to set a limit to the number of strikes that appear in the FX Option Quote Board. You can select up to 500 strikes.

If you want to view the at-the-money or ATM line in the FX Option Quote Board, you can check the **Display ATM Line** checkbox.

You can implement your changes in the FX Options Quote Board and close the Option Board Filter window by clicking **Apply**.

IronFX Global is authorised and regulated by

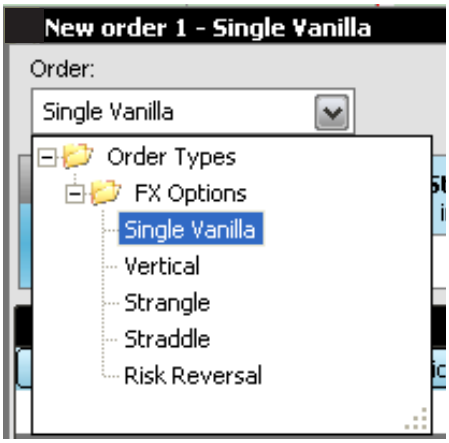
Member of Eurex Exchange

PLACING AN OPTION ORDER

When you're ready to place an option order, you can double-click on the Bid or Ask price under the Call or Put section in the FX Options Quote Board. This opens the FX Options New Order window.

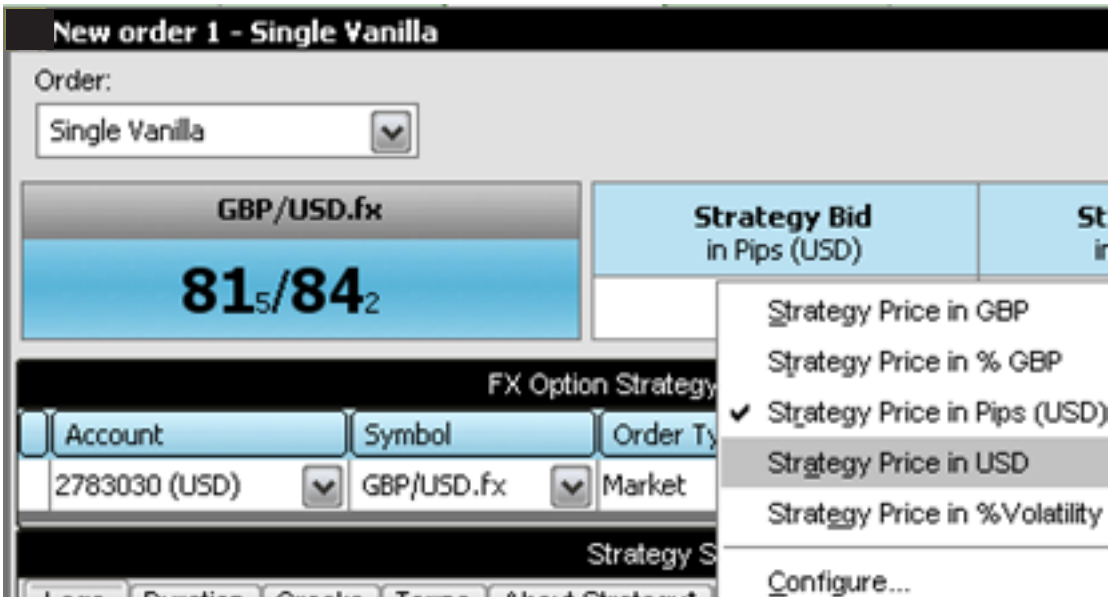
You can also open the FX Option New Order window by right-clicking in the FX Options Quote Board, selecting **New Order** and then choosing the order type (**Vertical, Straddle, Strangle, Risk Reversal** or **Single Vanilla**) you want from the drop-down menu. This opens the New Order window with the strategy set up.

Like the New Order window that you use to place currency pair orders, the FX Options New Order window contains a variety of tools to help you place your options trade.



The **Order** drop-down menu is where you can select one of the available option order strategies. We'll discuss how each one of these strategies work in a moment.

The currency pair display shows the real-time prices and market direction for the selected currency pair. If you want to view the Price Activity window or the chart window for the currency pair, right-click on the currency pair display and select **Price Activity or Open Chart** from the drop-down menu.



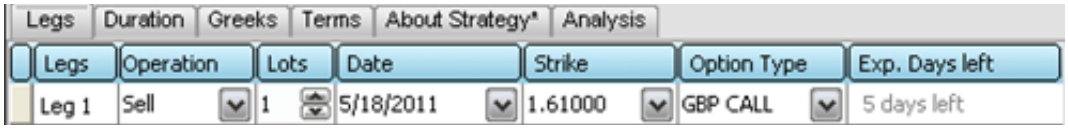
The price table displays the strategy price of the option. When you first open the FX Option New Order window, the strategy price displays the price in pips by the terms currency. You can change the price display of the order by right-clicking on the prices in the price table and selecting the option you want from the drop-down menu.

You can hide the price table by right-clicking on the currency pair display and unchecking **Display Price Table.**

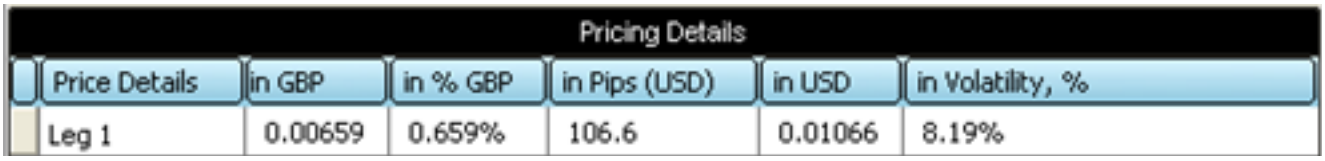
In the Option Strategy section, you can select the account you want, the currency pair, the order type and whether the option order is a buy or sell. Multi-Asset will automatically set the premium. If you select **Stop** or **Limit** in the **Order Type** drop-down menu, you can set you own price in the **Order Price** field.

The Strategy Settings section contains six tabs.

- The Legs tab displays the number of legs required to execute the selected strategy. You can specify the operation, number of lots, the expiration date and the option type for each leg, depending on the strategy.

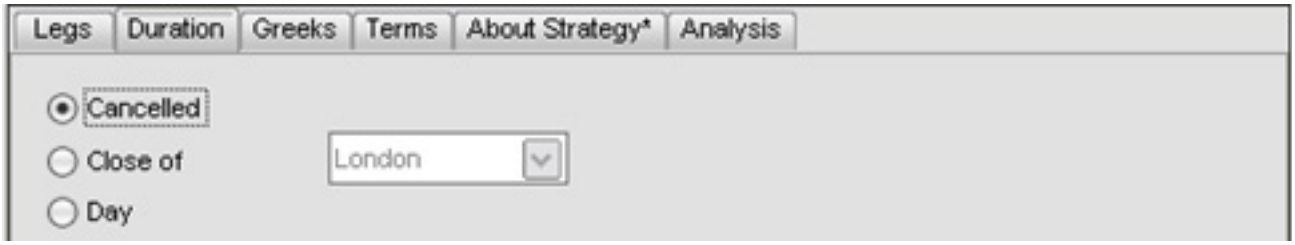


You can view pricing information for each leg in the Pricing Details section.

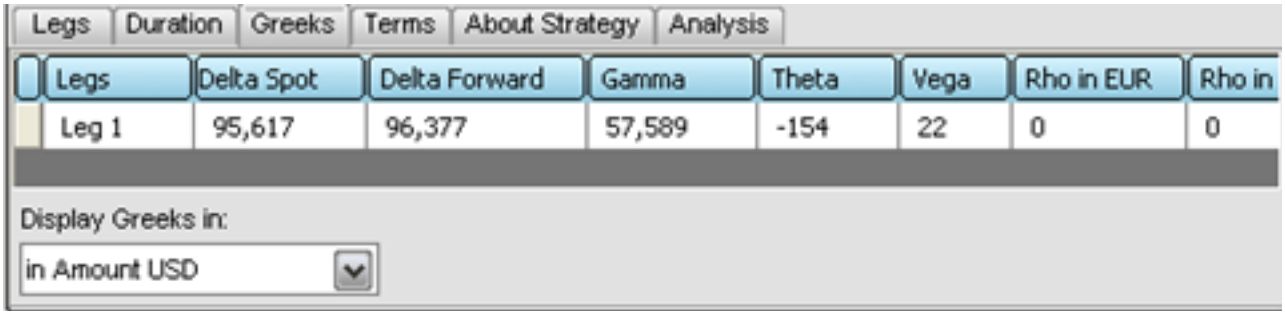


If you would like to Delta hedge your option trade, you can click the **Hedge** checkbox. When this is checked, IronFX Multi-Asset Trader will issue a market order to buy or sell the currency pair in the amount that offsets the Delta exposure from the option order.

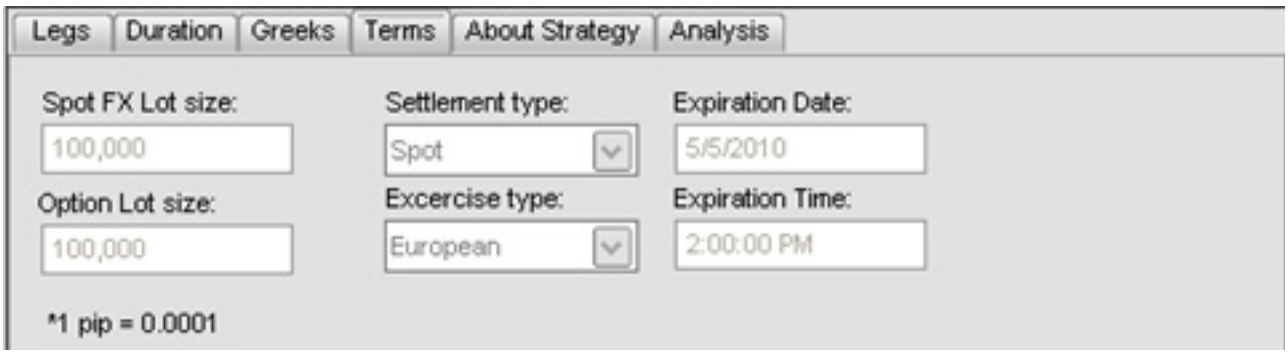
- The Duration tab displays how long your order will be working. All option orders will be considered **Cancelled**; this means your order will remain working until you decide to cancel it or it is filled.



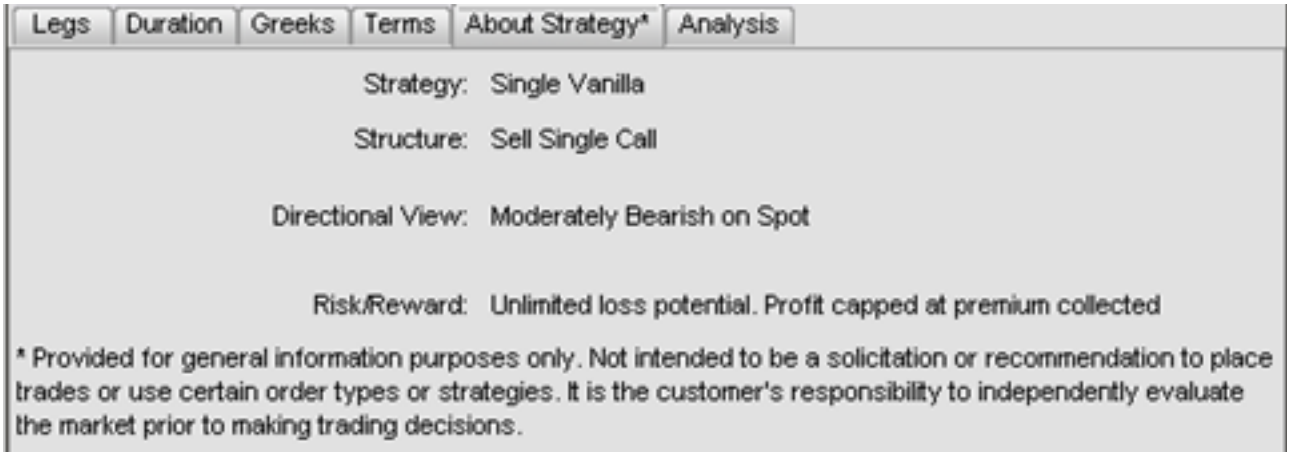
- The Greeks tab shows the values for the Greeks (Delta, Gamma, Theta, Vega and Rho). You can choose to display Greek values by the base or terms currency or in a percentage of the base currency by using the **Display Greeks** drop-down menu.



- The Terms tab displays the lot size, settlement type, and expiration date and time for the trade.



- The About Strategy tab displays information about the type of strategy you selected. You can view how it is structured, the directional view, and the possible risk/reward.



Legs
Duration
Greeks
Terms
About Strategy*
Analysis
Strategy: Single Vanilla
Structure: Sell Single Call
Directional View: Moderately Bearish on Spot
Risk/Reward: Unlimited loss potential. Profit capped at premium collected
* Provided for general information purposes only. Not intended to be a solicitation or recommendation to place trades or use certain order types or strategies. It is the customer's responsibility to independently evaluate the market prior to making trading decisions.

- The Analysis tab summarises the cost, the maximum profit and loss and what the breakeven price would be for your option.

At the bottom of the window, you can click » to display the Order Form Settings. To view the whole price of the underlying currency pair, leave the **Display Handle** checkbox checked; uncheck it to only see the last two numbers in the ticket. Check the **Close When Finished** checkbox to close the FX Options New Order window after you place your order.

If you frequently place one type of option trade, you can click the **Save link** in the upper right corner of the FX Options New Order window to make your settings appear every time you place an option trade.

When done, click **Submit** to place your option order. A confirmation window will appear that displays the details of your trade and analysis information.

Once you click **Yes**, your option orders will appear in the Working Orders window or as an option position in Open Positions window.

PLACING A SINGLE VANILLA OPTION ORDER

When you want to place a simple call or put order, you would select **Single Vanilla** from the **Order** drop-down menu. This is the most basic type of option order.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

PLACING A SINGLE VANILLA OPTION ORDER:

1. Select **Option Board** from the **View** menu.
2. Make sure the currency pair you want is selected. To change it, click and select one from the **Underlying Market** drop-down menu.
3. Click next to the option expiry date to expand the option chain.
4. Double-click on the price in the Bid or Ask column under the Call or Put section.
5. In the FX Option New Order window, make sure **Single Vanilla** is selected from the **Order** drop-down menu.
6. Check the settings in the FX Option Strategy section. If desired, click under the **Account, Symbol, Order Type** or **Operation** drop-down menu and change the settings.
7. In the Strategy Settings section, adjust the number in the Lots field on the Legs tab. If desired, you can also click under the **Date, Strike** or **Option Type** drop-down menu and change the settings.
8. If desired, click the Duration, Greeks, Terms, About Strategy and Analysis tabs to view other details about the order.
9. When done, click **Submit** to place your option order. A confirmation window will appear that displays the details of your order.
10. Click **Yes** to confirm the order.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

PLACING A VERTICAL OPTION ORDER

When you select **Vertical** from the **Order** drop-down menu, the FX Option New Order window displays settings so you can open a long and a short call or put on the same currency pair. This is called a multi-leg order and each option would be considered a leg. Both option legs have the same expiry, but different strike prices.

PLACING A VERTICAL OPTION ORDER:

1. Select **Option Board** from the **View** menu.
2. Make sure the currency pair you want is selected. To change it, click and select one from the **Underlying Market** drop-down menu.
3. Click next to the option expiry date to expand the option chain.
4. Double-click on the price in the Bid or Ask column under the Call or Put section.
5. In the FX Options New Order window, make sure **Vertical** is selected from the **Order** drop-down menu.
6. Check the settings in the FX Options Strategy section. If desired, click under the **Account, Order Type** or **Operation** drop-down menu and change the settings.
7. In the Strategy Settings section, adjust the number in the **Lots** field for Leg 1 of the vertical. The lot size in Leg 2 automatically updates.
8. In Leg 1, click next to the **Strike** drop-down menu and select a strike price. Each leg must have a different strike price, so repeat the step for Leg 2.
9. If desired, you can also click under the **Date** or **Option Type** drop-down menu and change the settings. The legs in a vertical must have the same expiry, so if you update the date in Leg 1, it appears in Leg 2 automatically.

10. If desired, click the Duration, Greeks, Terms, About Strategy and Analysis tabs to view other details about the order.
11. When done, click **Submit** to place your option order. A confirmation window will appear that displays the details of your trade and analysis information.
12. Click **Yes** to confirm the order.

PLACING A STRADDLE OPTION ORDER

When you select **Straddle** from the **Order** drop-down menu, the FX Options New Order window displays settings so you open both a call and a put on a currency pair. With this kind of order, both option legs must be going long (a long straddle) or short (a short straddle) and have the same strike price and expiry.

PLACING A STRADDLE OPTION ORDER:

1. Select **Option Board** from the **View** menu.
2. Make sure the currency pair you want is selected. To change it, click and select one from the **Underlying Market** drop-down menu.
3. Click next to the option expiry date to expand the option chain.
4. Double-click on the price in the Bid or Ask column under the Call or Put section.
5. In the FX Option New Order window, make sure **Straddle** is selected from the **Order** drop-down menu.
6. Check the settings in the FX Option Strategy section. If desired, click under the **Account, Order Type** or **Operation** drop-down menu and change the settings.
7. In the Strategy Settings section, adjust the number in the **Lots** field for Leg 1 of the straddle. The lot size in Leg 2 automatically updates.

8. In Leg 1, click next to the **Strike** drop-down menu and select the strike price you want. Each leg must have the same strike price, so the strike price for Leg 2 automatically updates.
9. If desired, you can also click under the **Date** or **Option Type** drop-down menu and change the settings for Leg 1. The legs in a straddle must have the same expiry, so if you update the date in Leg 1, it appears in Leg 2 automatically.
10. If desired, click the Duration, Greeks, Terms, About Strategy and Analysis tabs to view other details about the order.
11. When done, click **Submit** to place your option order. A confirmation window will appear that displays the details of your trade and analysis information.
12. Click **Yes** to confirm the order.

PLACING A STRANGLE OPTION ORDER

When you select **Strangle** from the **Order** drop-down menu, the FX Option New Order window displays settings so you open both a call and a put on a currency pair. Like a straddle, both option legs of your strangle must be going long or short and have the same expiry, but your put must have a lower strike price than the call.

PLACING A STRANGLE OPTION ORDER:

1. Select **Option Board** from the **View** menu.
2. Make sure the currency pair you want is selected. To change it, click and select one from the **Underlying Market** drop-down menu.
3. Click next to the option expiry date to expand the option chain.

4. Double-click on the price in the Bid or Ask column under the Call or Put section.
5. In the FX Option New Order window, make sure **Strangle** is selected from the **Order** drop-down menu.
6. Check the settings in the FX Option Strategy section. If desired, click under the **Account, Symbol, Order Type** or **Operation** drop-down menu and change the settings.
7. In the Strategy Settings section, adjust the number in the **Lots** field for Leg 1 of the strangle. The lot size in Leg 2 automatically updates.
8. In Leg 1, click next to the **Strike** drop-down menu and select the strike price you want for each leg. Each leg should have a different strike price. automatically updates.
9. If desired, you can also click under the **Date** or **Option Type** drop-down menu and change the settings for Leg 1. The legs in a strangle must have the same expiry, so if you update the date in Leg 1, it appears in Leg 2 automatically.
10. If desired, click the Duration, Greeks, Terms, About Strategy and Analysis tabs to view other de tails about the order.
11. When done, click **Submit** to place your option order. A confirmation window will appear that displays the details of your trade and analysis information.
12. Click **Yes** to confirm the order.

PLACING A RISK REVERSAL OPTION ORDER

When you select **Risk Reversal** from the **Order** drop-down menu, the FX Option New Order window displays settings for a call and put option in the same currency pair. The options have a similar delta value and are set up to have the same expiry and number of lots.

PLACING A RISK REVERSAL OPTION ORDER:

1. Select **Option Board** from the **View** menu.
2. Make sure the currency pair you want is selected. To change it, click and select one from the **Underlying Market** drop-down menu.
3. Click next to the option expiry date to expand the option chain.
4. Double-click on the price in the Bid or Ask column under the Call or Put section.
5. In the FX Option New Order window, make sure **Risk Reversal** is selected from the **Order** drop-down menu.
6. Check the settings in the FX Option Strategy section. If desired, click under the **Account, Symbol, Order Type** or **Operation** drop-down menu and change the settings.
7. In the Strategy Settings section, adjust the number in the **Lots** field for Leg 1 of the risk reversal. he lot size in Leg 2 automatically updates.
8. In Leg 1, click next to the **Strike** drop-down menu and select the strike price you want. Each leg must have a different strike price, so repeat the step for Leg 2.
9. If desired, you can also click under the **Date** or **Option Type** drop-down menu and change the settings for Leg 1. The legs in a risk reversal must have the same expiry, so if you update the date in Leg 1, it appears in Leg 2 automatically.
10. If desired, click the Duration, Greeks, Terms, About Strategy and Analysis tabs to view other de tails about the order.
11. When done, click **Submit** to place your option order. A confirmation window will appear that displays the details of your trade and analysis information.
12. Click **Yes** to confirm the order.

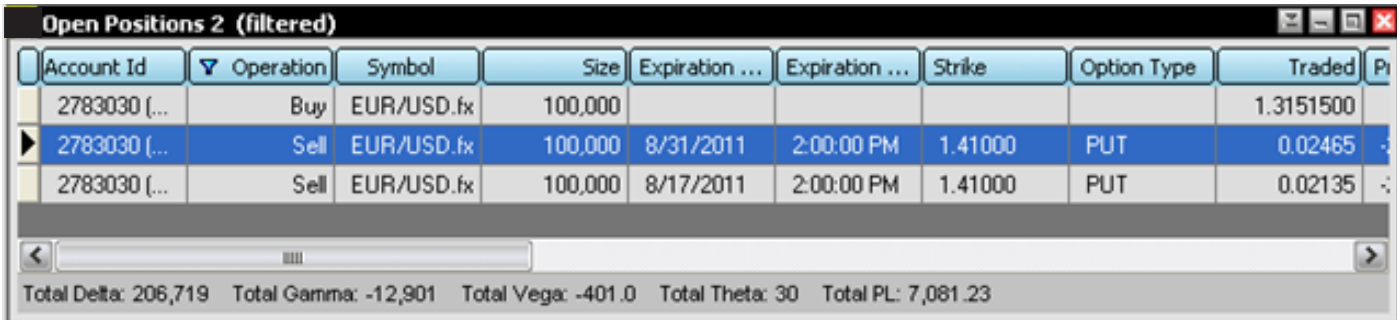
VIEWING OPTIONS IN THE OPEN POSITIONS WINDOW

Once placed, your market option orders appear in the Open Positions window. Your option stop or limit orders will appear in the Working Orders window until they are triggered by market moves.



You can view the premium price, strike, expiration date and time and option type for each option in the Open Positions window along with your regular forex positions. At the bottom of the Open Positions window, IronFX Multi-Asset Trader displays the Total Delta, Total Gamma, Total Vega, Total Theta, and your Total PL if all positions are in the same currency pair.

If you have options in more than one currency pair, you'll need to filter the Open Positions window. To do this, right-click in the window and select Filter. In the **Filter** window, check mark **Use Filter** and select one currency pair from the list.

On the option expiry, your in-the-money options are exercised automatically by IronFX Multi_Asset Traderand become regular forex positions in the Open Positions window. Any options that were at-the-money or out-of-the-money will expire worthless. You'll also see your new positions and expired options in the statements.

IRONFX applies an FXO Portfolio Margin requirement whenever traders hold a short option position. Multi-Asset automatically calculates this using the Delta and Vega values of all option and spot positions. For more information on how this margin requirement works and how it may affect your balance, contact IRONFX.

CUSTOMISING THE FX OPTIONS QUOTE BOARD

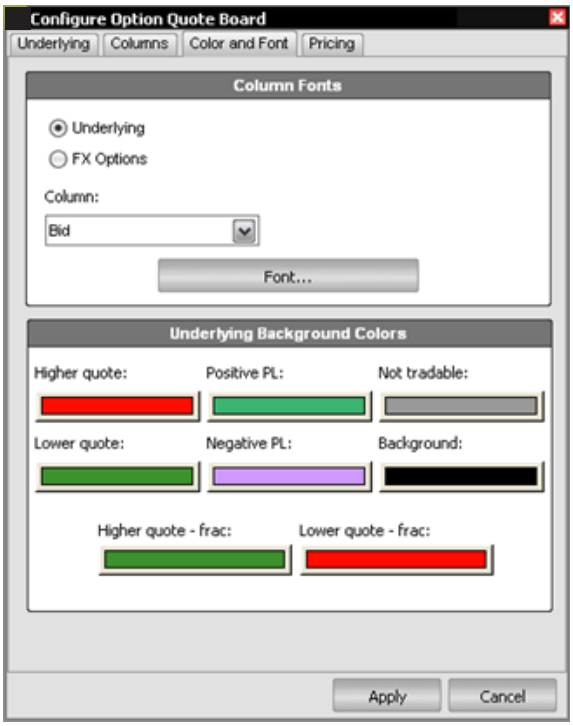
You can customise the appearance of the FX Option Quote Board by right-clicking on it and selecting Configure… from the drop-down menu. This displays the **Configure** Option Quote Board window, which contains four tabs.

On the Underlying tab, you can select the information you want to display as columns in the Underlying Markets row.

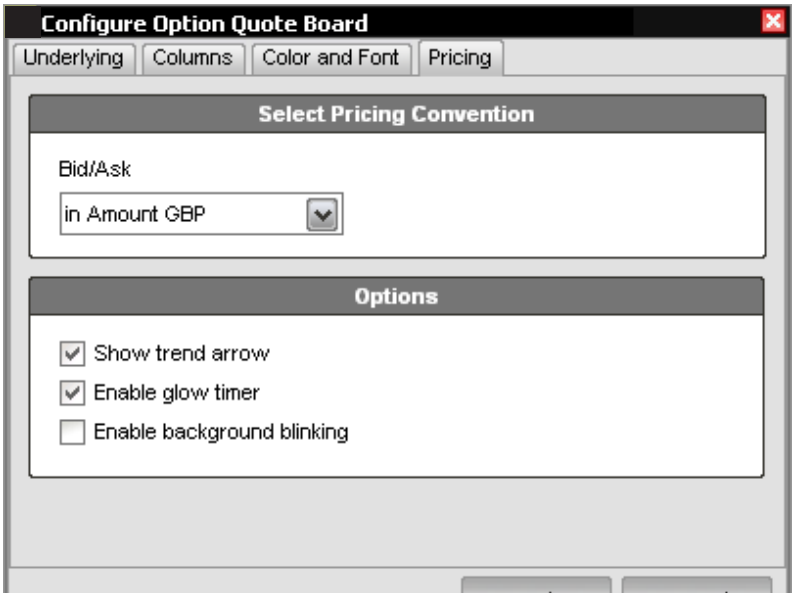
IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

On the Columns tab, you can select the information you want to display as columns in the Option Chain table.

On the Colour and Font tab, you can change the font style for columns in the Option Chain table and the background colour settings for the Underlying Markets row.



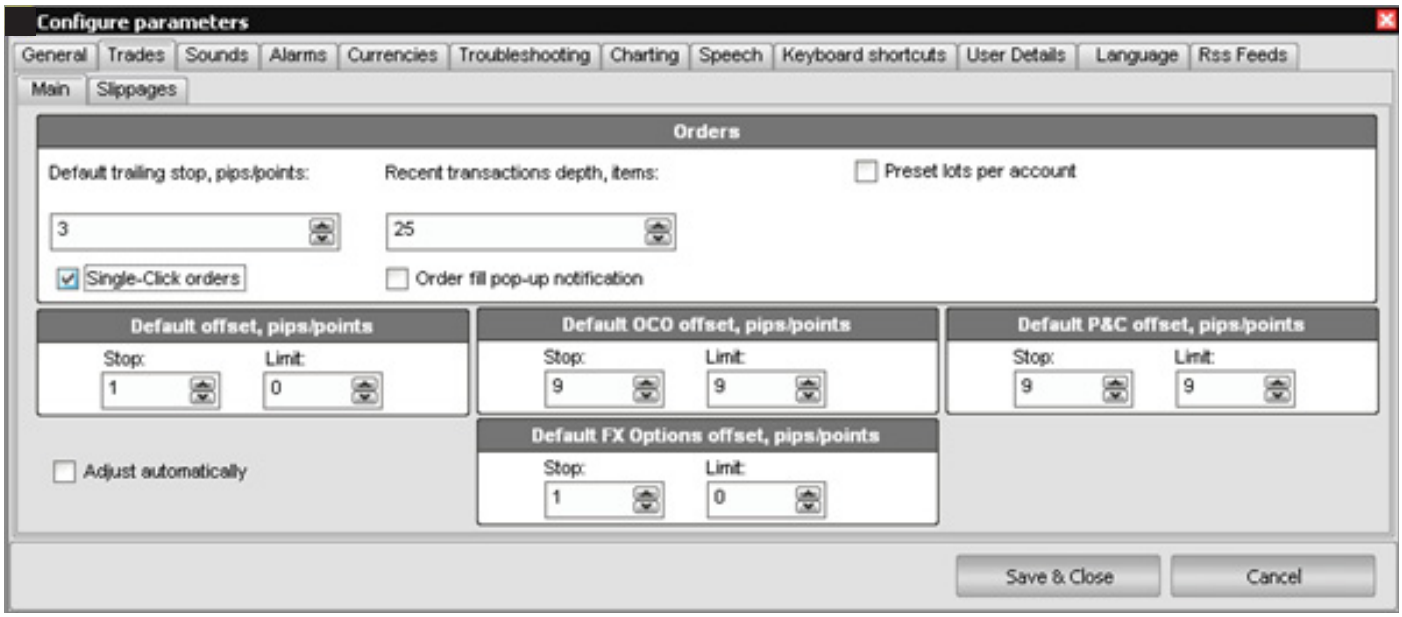
On the Pricing tab, you can select the pricing convention you want to use and activate options to help you gauge market moves.



SPECIFYING FX OPTION ORDER SETTINGS IN THE TRADES TAB

On the Trades tab in the Configure Parameters window, you can display settings for placing orders in Multi-Asset. When you select the Main tab, you can specify settings that will appear whenever you place an FX option order.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange



You can set the number of pips or fractional pips of the offset in the Default FX Options Offset section.

You can open the Configure Parameters window by clicking **Configure** from the **File** menu and selecting **Parameters**. For more information on this window, see Specifying Order Settings in the Trades Tab.

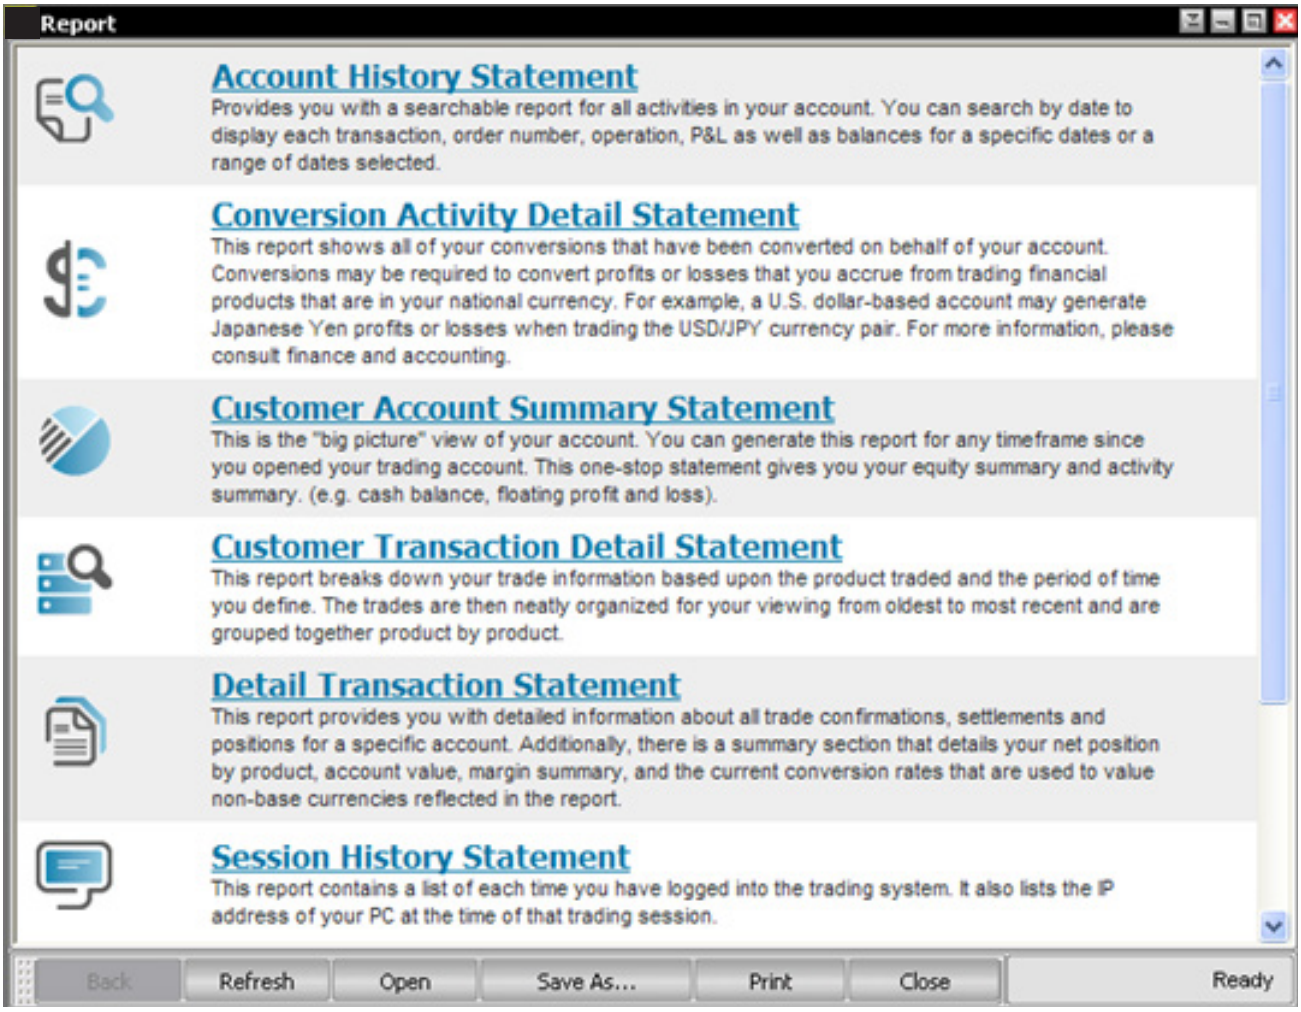
SECTION 6: DISPLAYING STATEMENTS AND VIEWING ANALYTICS

IronFX Multi-Asset Trader provides a variety of statements that you can use to monitor your trading activity. You can also view technical analysis statements as well as access IRONFX resources from within IronFX Multi-Asset Trader. In this section, you'll learn how to use these tools.

DISPLAYING THE REPORT WINDOW

In IronFX Multi-Asset Trader, a statement is a record of the activity on your account. You can generate several different kinds of statements using the Report window. This appears when you click **Statements** at the top of the IronFX Multi-Asset Trader menu bar.



Report
Account History Statement
Provides you with a searchable report for all activities in your account. You can search by date to display each transaction, order number, operation, P&L as well as balances for a specific dates or a range of dates selected.
Conversion Activity Detail Statement
This report shows all of your conversions that have been converted on behalf of your account. Conversions may be required to convert profits or losses that you accrue from trading financial products that are in your national currency. For example, a U.S. dollar-based account may generate Japanese Yen profits or losses when trading the USD/JPY currency pair. For more information, please consult finance and accounting.
Customer Account Summary Statement
This is the "big picture" view of your account. You can generate this report for any timeframe since you opened your trading account. This one-stop statement gives you your equity summary and activity summary. (e.g. cash balance, floating profit and loss).
Customer Transaction Detail Statement
This report breaks down your trade information based upon the product traded and the period of time you define. The trades are then neatly organized for your viewing from oldest to most recent and are grouped together product by product.
Detail Transaction Statement
This report provides you with detailed information about all trade confirmations, settlements and positions for a specific account. Additionally, there is a summary section that details your net position by product, account value, margin summary, and the current conversion rates that are used to value non-base currencies reflected in the report.
Session History Statement
This report contains a list of each time you have logged into the trading system. It also lists the IP address of your PC at the time of that trading session.

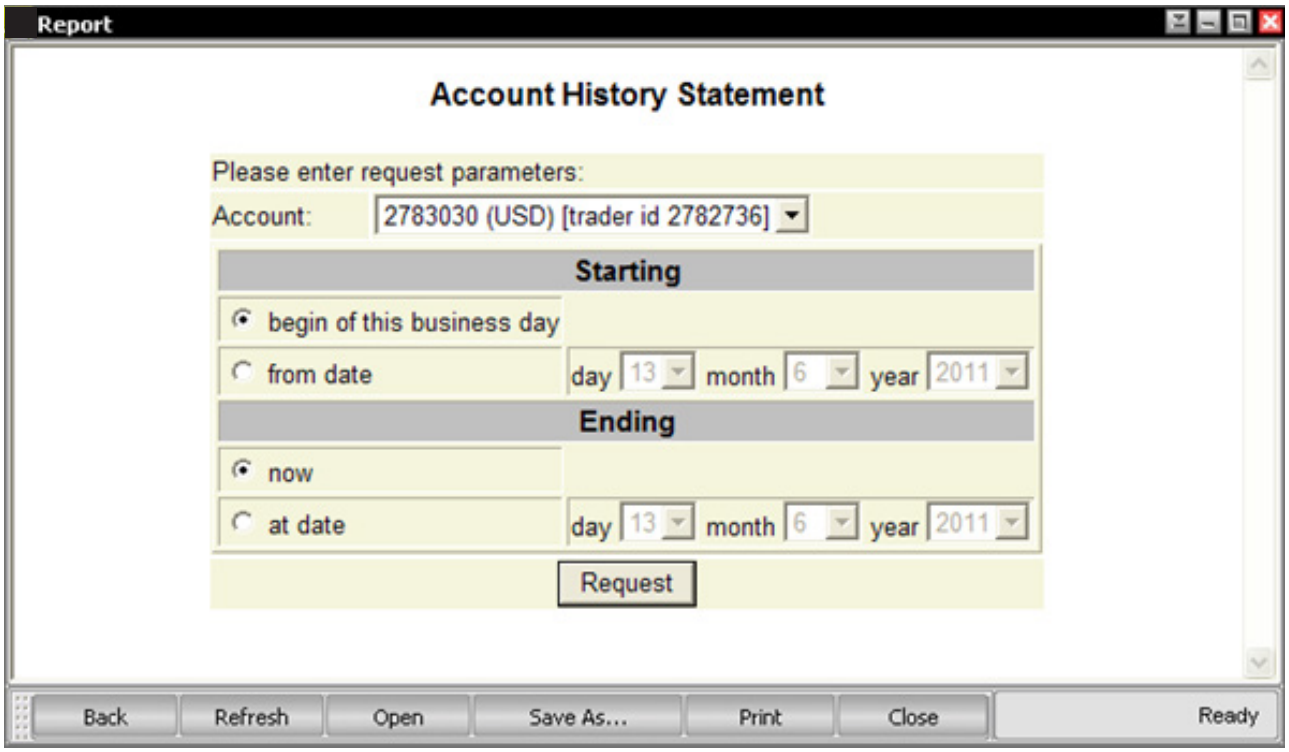
Save As...
Print
Close
Ready

If you have a position-based account, you will only have access to five statements: The Account History Statement, Customer Account Summary Statement, Customer Transaction Detail Statement, Session History Statement, and User Activity Statement.

When you select the statement you want, the Report window changes to a report entry page. Here, you can set dates and other information to generate the statement.



It may take IronFX Multi-Asset Trader longer to generate your statement if you select a long or older time frame.

After you click **Request** to generate the statement, you'll notice that six buttons in the menu bar at the bottom of the Report window become active.

Back – Returns to the entry page.

Refresh – Refreshes the statement if you have additional transactions.

Open – Displays a previously generated and saved statement in the Report window.

Save As… – Saves the statement to a file location of your choice.

Print – Sends the generated statement file to your printer.

Close – Closes the Report window.

DISPLAYING YOUR STATEMENT:

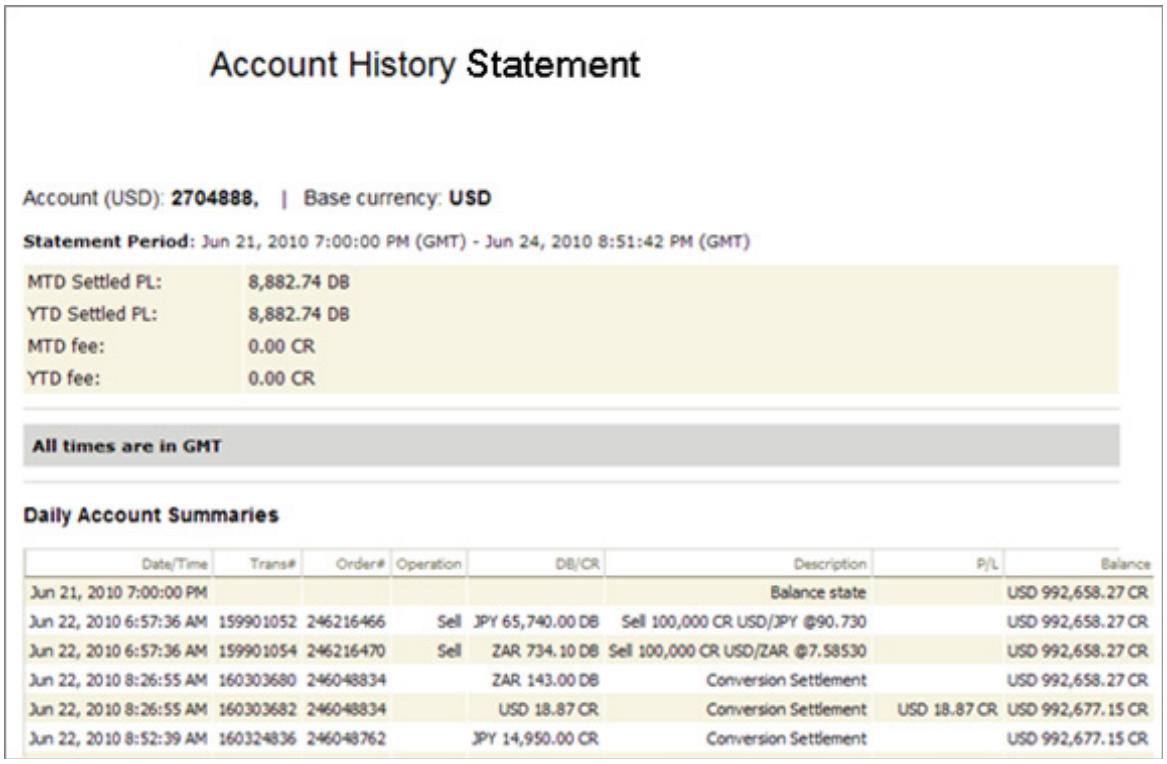
1. Click the **Statements** menu.
2. From the window, click the link for the statement that you want.
3. Select an option in the Starting section. If you select **From Date**, select a date.
4. Select an option in the Ending section. If you select **At Date**, select a date.
5. Click **Request**.

When you print customer statements on a position-based account, you'll also notice that your transaction or activity statements from IronFX Multi-Asset Trader do not include rolled transactions. Interest is debited or credited to your account daily through cash adjustments.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

DISPLAYING THE ACCOUNT HISTORY STATEMENT

The Account History Statement contains a list of all the changes on your account's balance for a specified period. After you display it, you'll see that it consists of three main parts:



Account History Statement

The **Open Positions** section shows all of the trades that are executed but are not closed.

The **Trading Activity Detail** section contains all of the trades that were placed during the statement period, but were not subject to market risk at the end of the period. The trades are grouped by which instrument was traded and then totalled at the end of each group. You can see trade details specific to the order and how the trade turned out. The last column in this section shows the profit or loss in the base currency of the account and is only created when a position is closed.

The **Trading Activity Detail** section does not include conversion orders.

DISPLAYING THE SESSION HISTORY STATEMENT

The Session History Statement contains a list of all login sessions for a specified period. After you display it, you'll see that it identifies each time you are logged in to the IronFX Multi-Asset Trader system and provides a time window of activity and the IP address of the transaction locations.

Foreign Exchange Confirmations - Lists all orders executed during the statement date whether that's by the trader, the dealer or the system. The list organises the confirmation by date and time, the order type, the direction of the order (B=buy or S=sell), the value date, the instrument, the order amount, the rate and the market value.

Foreign Exchange Settlements - Displays only those transactions that have reached their value date and have been settled into your cash accounts. This list contains the same columns as the Foreign Exchange Confirmations sections, with one additional column; Market Value or the unrealised profit and loss of an order.

Foreign Exchange Open Positions - Shows all of the transactions that have yet to reach the settlement that will occur at the close of their value date, which occurs at 15:00 ET on the date of value. The total profits and losses in this section will equal unrealised profit and loss (UPL) that is displayed on the statement and in Multi-Asset

Position Summary - Displays all of the open positions on the statement date. This list displays the instrument, the direction of the order, the amount of the transaction, the rate of all orders in this position, the counter amount, the margin requirement and the margin value.

Account Value and Margin Summary - Lists a breakdown of account balance and unrealised profit and loss by currency. It also displays total for margin requirement, margin excess, Open P/L, Unrealised P/L and equity.

Currency Conversion Rates - Displays the prices for converting currencies when realising profit and loss.

The rates in the Currency Conversion Rates section will only be accurate for a 24-hour period contained during the times of 15:00 ET to 15:00 ET. If you have a profit or loss that has been settled into a non-US Dollar currency, that amount will be assigned the conversion rate that was in effect on the date that the particular debit or credit was created.

DISPLAYING THE TRANSACTION STATEMENT

The Transaction Statement displays a list of all transactions for a given period.

402935210	Jun 14, 2011 7:09:31 PM	-	new	.SILVER.cfd	B	3,557.8	1 CR							
402935280	Jun 14, 2011 7:10:38 PM	-	new	.WTI.cfd	B	99.17	1 CR							

This statement was specifically designed for traders using our net-based forex trading offering and calculation system, which is the interbank standard for reporting forex transactions.

After you display it, you'll see that it is separated into two sections. The first, the Statement Period, displays the month-to-date and year-to-date totals for settled profit and loss and fees.

The second, the Transactions list, displays details, such as the settlement, the order type, the order direction, the amount, the swap amount and others for each transaction.

VIEWING THE ANALYTIC PAGES

You can view daily commentary from IRONFX and other providers, display IRONFX's economic calendar as well as download account documents using the menu options in the Analytic Pages menu.

This menu provides a variety of news and analysis pages, some that are even unique to IronFX. To learn how you can add resources to this menu, contact a IronFX account executive.

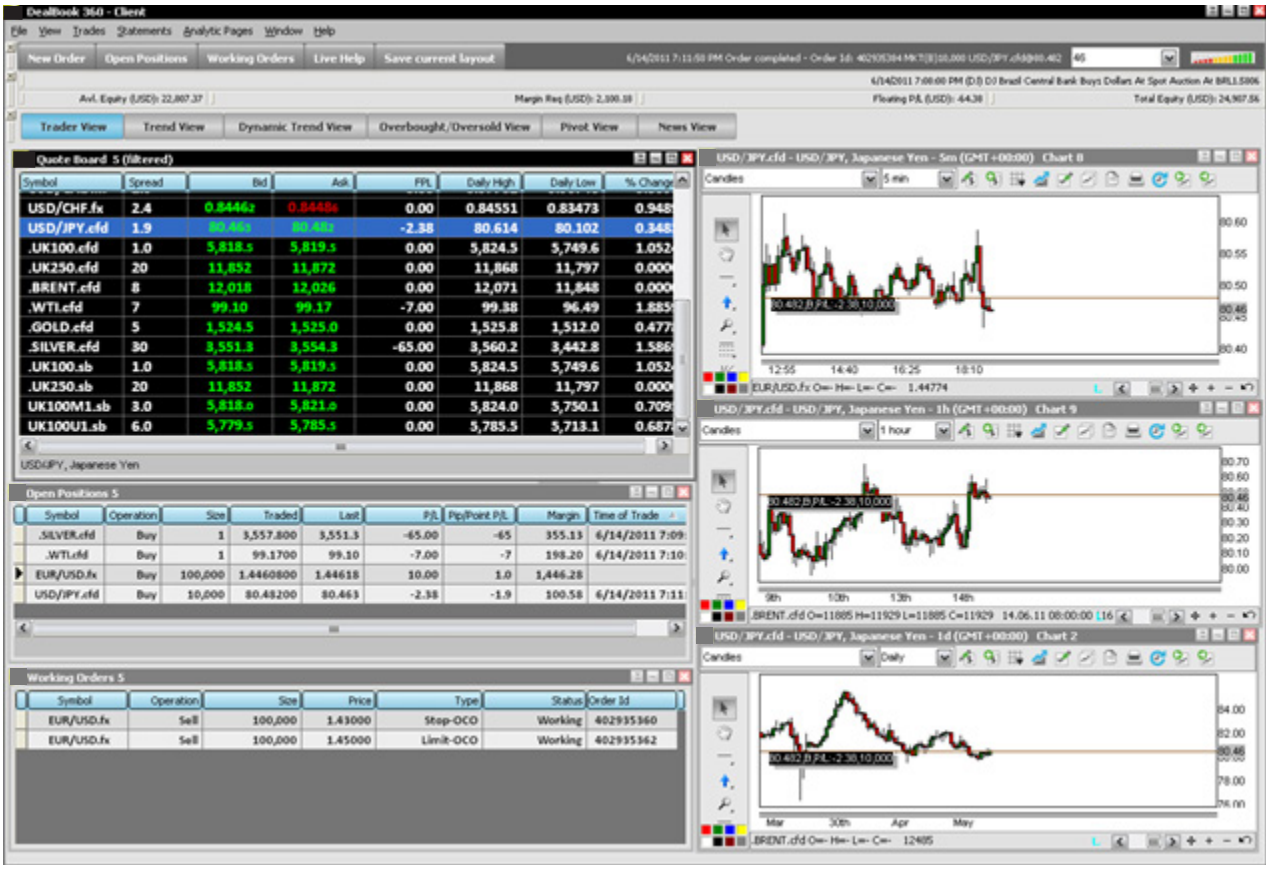
SECTION 7: CUSTOMISING THE APPEARANCE AND SETTINGS IN IRONFX MULTI-ASSET TRADER

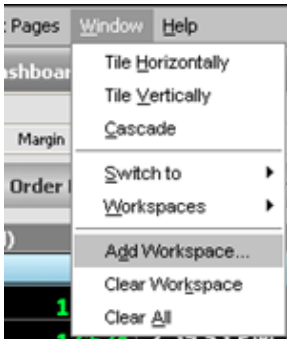
As you become more familiar with IronFX Multi-Asset Trader, you may want to change some of the settings to make the platform fit your trading style. In this section, we'll look at ways to customise windows and other tools in IronFX Multi-Asset Trader.

MODIFYING THE IRONFX MULTI-ASSET TRADER WORKSPACE

The IronFX Multi-Asset Trader Workspace is the area where you can display and arrange charts, windows and other tools so you can place and monitor your trade.



You can add a workspace by clicking Add Workspace from the Window menu. This displays a window where you can enter the name of the new workspace.



Once added, you can begin to add and place windows in the workspace to fit your trading style. Simply right-click in the workspace to display the drop-down menu and select the windows you want.

You can open as many windows as you need. You can also save your layout so you don't have to arrange the workspace every time you open IronFX Multi-Asset Trader.

If you add too many windows or want to start completely over, you can click **Clear Workspace** from the Window menu. You can also remove all windows from all workspaces by clicking **Clear All**.

You can rename and remove already existing workspaces by right-clicking on any workspace button and selecting the menu option you want.

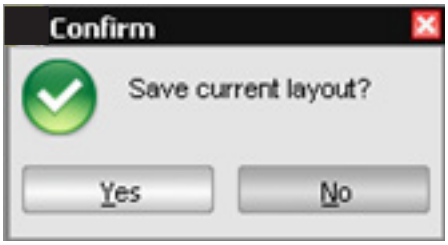
If you select Chart, you will first have to select an instrument.

You can also use the Clone Workspace menu option to copy all of the contents of one workspace into a newly created workspace.

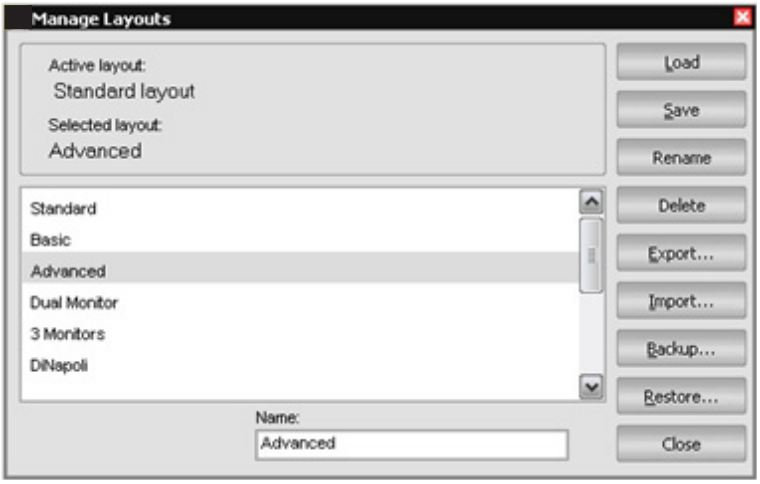
MANAGING LAYOUTS

You can save the arrangement of your windows in the workspace and their contents by clicking **Save Current Layout** in the Quick Access toolbar, if it's displayed.

IronFX Multi-Asset Trader will also ask you if you want to save the layout before the application closes. If you click **Yes**, your saved layout will appear the next time you open IronFX Multi-Asset Trader.



You can also load, edit and delete layout files in IronFX Multi-Asset Trader using the Manage Layouts window. You can access this by selecting **Layout** from the **File** menu and then clicking **Manage** from the drop-down menu.



Load - Displays the currently selected layout in IronFX Multi-Asset Trader.

Save - Saves any changes you have made to the layout. After you click it, the **Load, Save, Delete** and **Export** buttons become inactive. When you click Save, IronFX Multi-Asset Trader saves the current configuration of the layout. You can even give it a name by entering a name in the Name text box before you click **Save**.

Delete - Removes the selected layout from IronFX Multi-Asset Trader. When you use **Delete**, the active layout cannot be deleted. You must first load a new layout and then click **Delete** if you need to remove the layout. **Delete** only removes the file from IronFX Multi-Asset Trader. It does not delete the .xml file.

Export - Enables you to name and save a layout as an XML file.

Import - Adds an .xml file to IronFX Multi-Asset Trader and displays it as a layout.

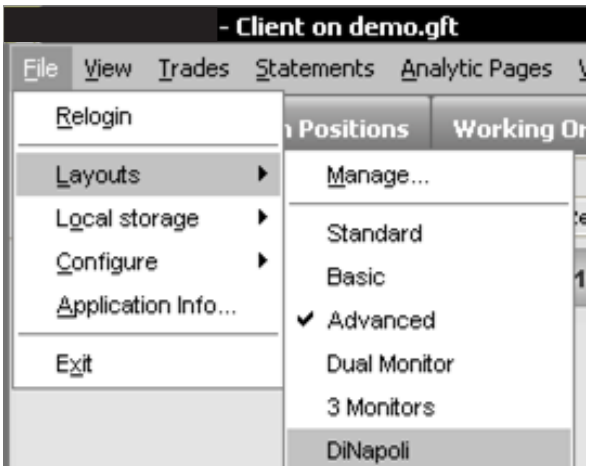
Backup - Saves the current layout in another folder.

Restore - Reloads the layout from the last saved version of the file.

Close - Exits the Manage Layouts window.

DISPLAYING A LAYOUT

When you install IronFX Multi-Asset Trader, you can open and display several pre-configured layouts. You can select one of these and customise it as you see fit.



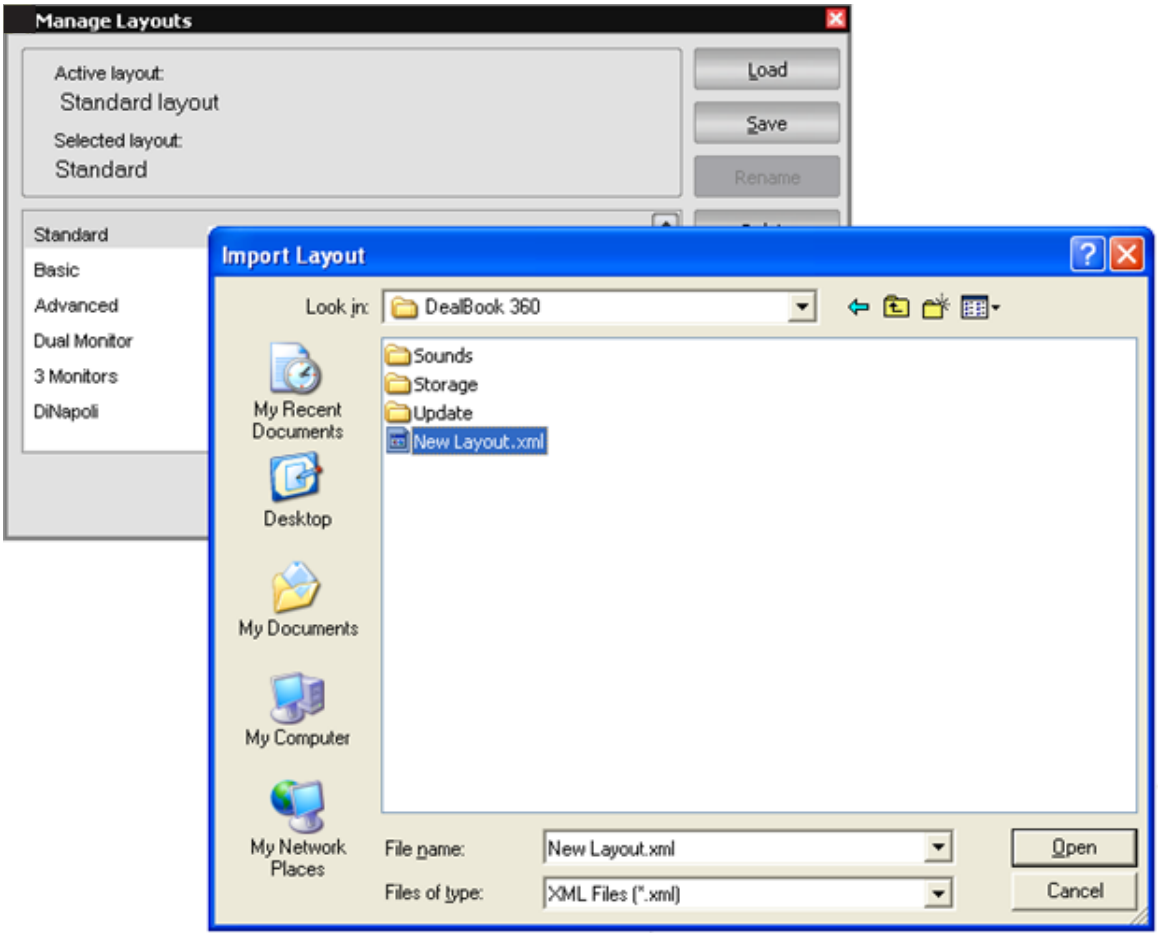
SELECTING A DIFFERENT LAYOUT:

1. In IronFX Multi-Asset Trader, click Layouts from the File menu. A drop-down menu of available layouts appears.
2. Select the layout you want. Loading a different layout may take a few minutes depending on the layout design.

Loading a different layout may take a few minutes depending on the layout design.

IMPORTING A LAYOUT

You can load layout files saved as .xml files by using the Import button in the Manage Layouts window. When you click this, you can access the Import Layout window and navigate to the .xml file you want.



IMPORTING AND LOADING LAYOUT FILES:

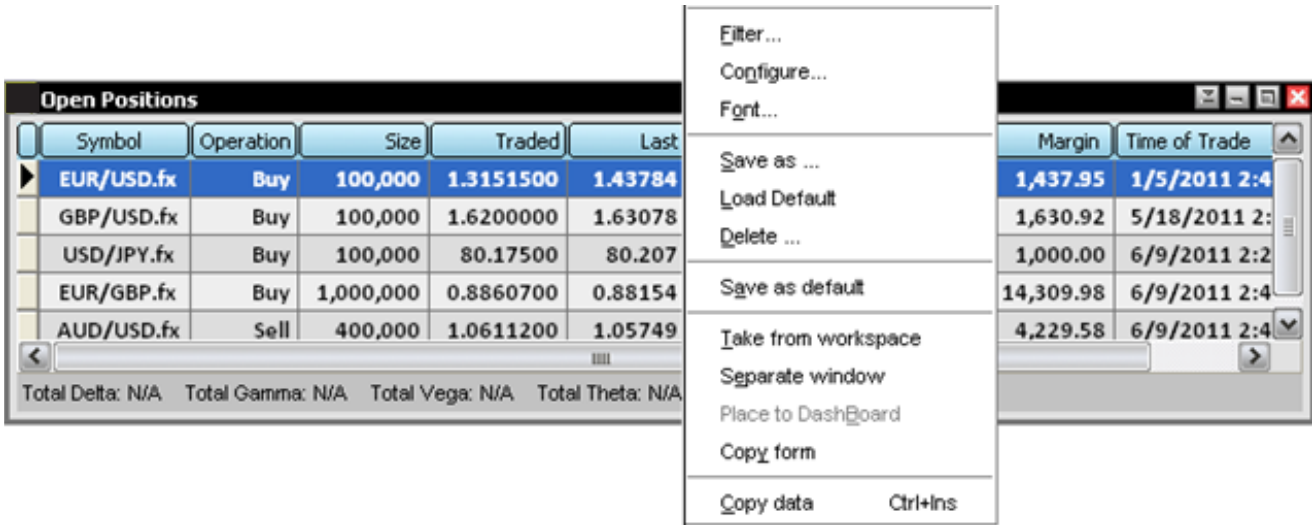
1. Click Layouts from the File menu.
2. Select Manage from the drop-down menu. The Manage Layouts window appears.
3. Click Import. This opens the Import Layout window.
4. Navigate to your desktop. Select the file you want and click Open.
5. When the Input Layout Name window appears, the name appears. If you want to rename the file, enter the new name now. When done, click OK.

6. The layout you just loaded appears in the layout window. Click the title to select it.
7. Click Load. This displays the new layout in IronFX Multi-Asset Trader.

Loading a different layout may take a few minutes depending on the layout design.

MANAGING IRONFX MULTI-ASSET TRADER WINDOWS

When you right-click on most IronFX Multi-Asset Trader windows, you can access a drop-down menu. Many of these menus contain the same commands.



While most of the menu options have been covered in previous sections, there are several menu options that appear in all windows. You can use these to customise and organise your workspace.

Configure - Opens the Configuration window for the window you're working on. You can use this window to customise the appearance of the selected IronFX Multi-Asset Trader window.

Font - Opens the Font window, where you can specify settings, such as font style, size and colour, for the text that appears in the window. Usually, this command appears in the Open Positions and Working Orders windows.

Save As - Saves the current settings in the Configuration window for the window you're working on. You can enter a name for the configuration and click OK.

Load Default - Displays a list of saved configuration files. You can select the one you want to apply from the drop-down menu.

Delete - Opens the Delete Defaults window so you can click on a previous saved configuration file and delete it.

Save As Default - Saves the current settings in the Configuration window for the window you're working on and displays them automatically whenever you open IronFX Multi-Asset Trader.

Take From Workspace - Moves the window outside the workspace. The window remains displayed even when you switch between workspaces.

Separate Window - Makes the selected window become independent from the IronFX Multi-Asset

Trader workspace. The window remains on the screen when you minimise the IronFX Multi-Asset Trader application so you can work in other applications. To restore the window to the workspace, right-click on it and select **Place to Workspace.**

Stay On Top - Makes the window always remain displayed over other program windows. You can only select this menu option after you've selected Separate Window.

Place to Dashboard - Adds the window to the Dashboard when it is active.

Copy Form - Copies the selected window or form with all of the present settings. The **Paste**… menu option becomes active so you can paste the configuration into another window or form later.

Copy Data - Copies the content in the window. You can then paste this into another file.

SELECTING TOOLS IN THE QUICK ACCESS TOOLBAR

You can modify the options that appear in the Quick Access toolbar by right-clicking on it and selecting **Configure**… from the drop-down menu. This displays the Quick Access Options window.

Visible items shows all the toolbar options that are currently displayed in the Quick Access toolbar.

Available items shows all the toolbar options that can be displayed in the Quick Access toolbar.

The Selection buttons help you add and remove options.

- Click << to display all options in the Quick Access toolbar.
- Click < to move an option from Available Items to Visible Items.
- Click > to move an option from Visible Items to Available Items.
- Click >> to remove all options from the Quick Access toolbar.

For more information about the Quick Access toolbar, see Quick Access Toolbar.

ARRANGING IRONFX MULTI-ASSET TRADER WINDOWS

In the Quote Board and the Open Positions and Working Orders windows, you can right-click in the window and view a drop-down menu with menu options related to that window. In these menus, several menu options appear that can help you organise your work space.

Take from Workspace - Displays the selected window outside of IronFX Multi-Asset Trader. The window remains on the screen even when you switch between workspaces.

Place to Workspace - Places the window that was taken from IronFX Multi-Asset Trader back in its original workspace.

Place to Dashboard - Adds the window to the IronFX Multi-Asset Trader Dashboard.

Separate Window - Makes the selected window appear as its own application. When active, the window remains on the screen when you minimise IronFX Multi-Asset Trader.

Stay on Top - Displays the selected window over all other program windows. This menu option appears only after you have selected Separate Window.

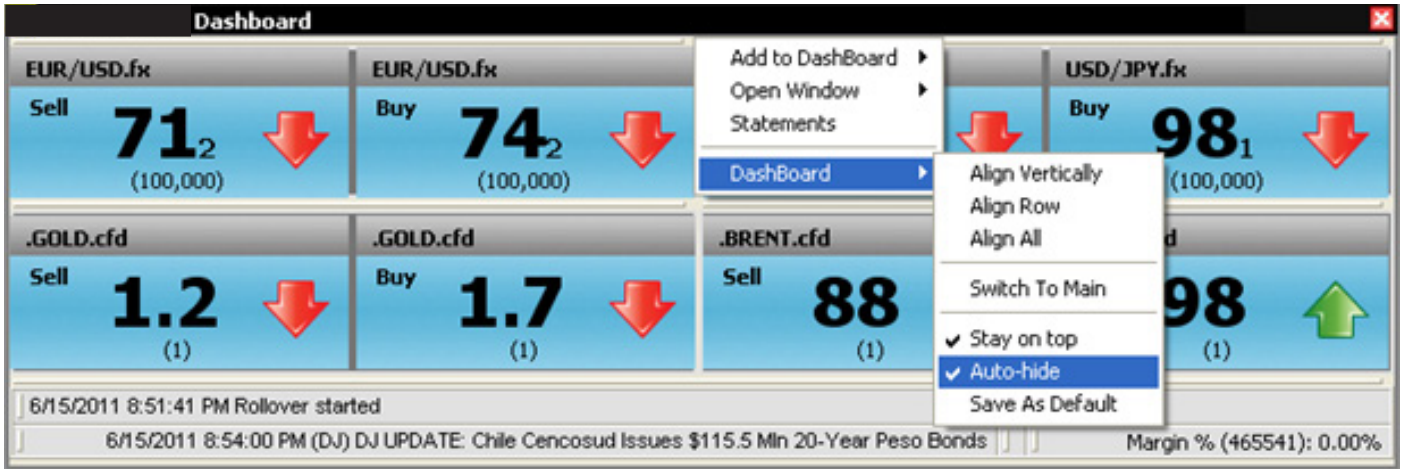
You can apply settings to IronFX Multi-Asset Trader to display windows a certain way every time you open IronFX Multi-Asset Trader; see Specifying Form Settings in the General Tab.

DISPLAYING FLOATING AND DOCKABLE WINDOWS

Some IronFX Multi-Asset Trader windows, like the Window List, can be displayed as floating windows or dockable windows. Floating windows can be opened and moved anywhere in the screen. You can right-click on these windows and select **Dockable** from the drop-down menu. Then you can move the window to the left, right, top or bottom of the workspace so it appears as a toolbar.

AUTO-HIDING THE DASHBOARD

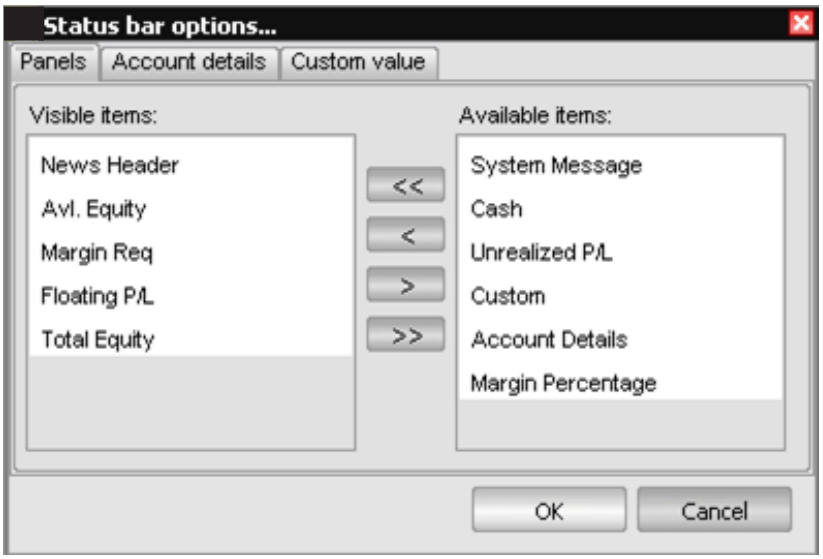
If you have the Dashboard displayed, you can choose to view it as a separate window. You can also set the Dashboard to appear, hide and reappear. When this feature, called **Auto-hide**, is selected, you can scroll to the edge of your desktop where your Dashboard is hidden and it will appear again.



SELECTING TOOLS IN THE STATUS BAR

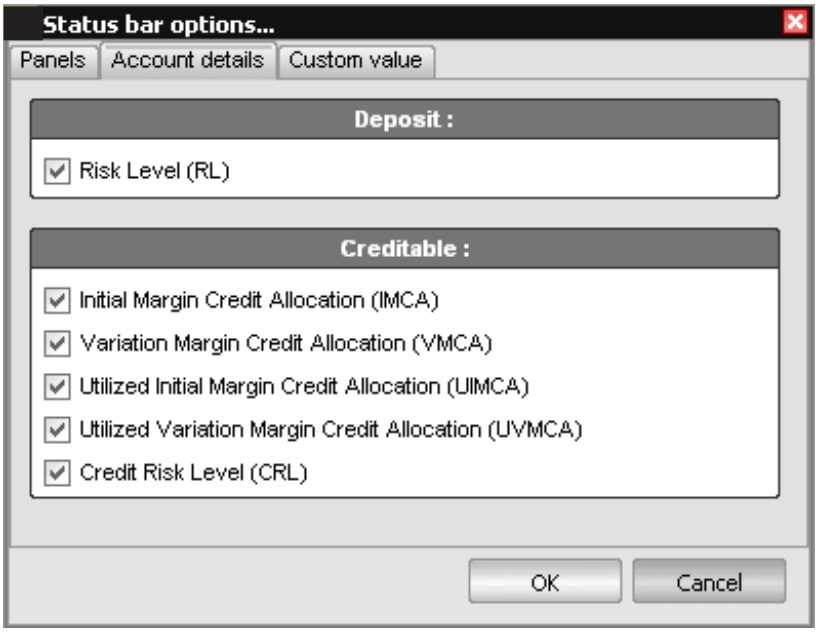
You can modify the options that appear in the Status bar by right-clicking on it and selecting **Configure**… from the drop-down menu. This displays the Status Bar Options window.

This window contains three tabs.

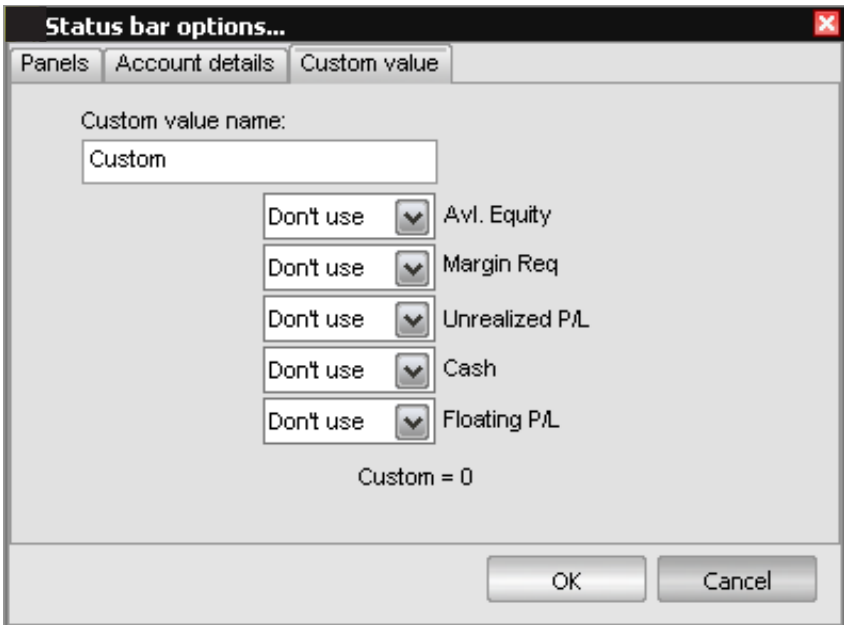


The Panels tab specifies what appears in the Status bar. The Visible Items section shows all of the options that are currently displayed in the Status bar and the Available Items section displays all of the options that can be displayed in the Status bar. The Selection buttons help you add and remove tools.

- Click << to display all options in the Status bar.
- Click < to move an option from Available Items to Visible Items.
- Click > to move an option from Visible Items to Available Items.
- Click >> to remove all options from the Status bar.



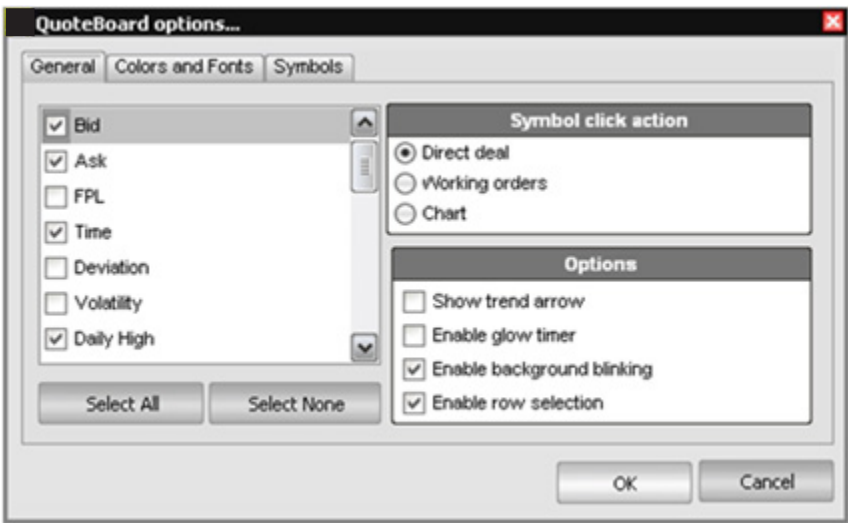
When you select the Account Details option, you can specify what information appears in it on the **Account Details** tab. This is divided into two sections: Deposit and Creditable. You can check or uncheck options as desired.



When you select the Custom option you can specify what information appears in it on the **Custom Value** tab. You'll use this tab to calculate an account total from a list of components and choose whether you want to add or subtract the value or not use it.

CONFIGURING THE QUOTE BOARD

You can customise the appearance of the Quote Board and the instruments that appear in it by right-clicking on it and selecting **Configure**… from the drop-down menu. This displays the Quote Board Options… window. In the General tab, you can select the information you want to display as columns in the Quote Board.

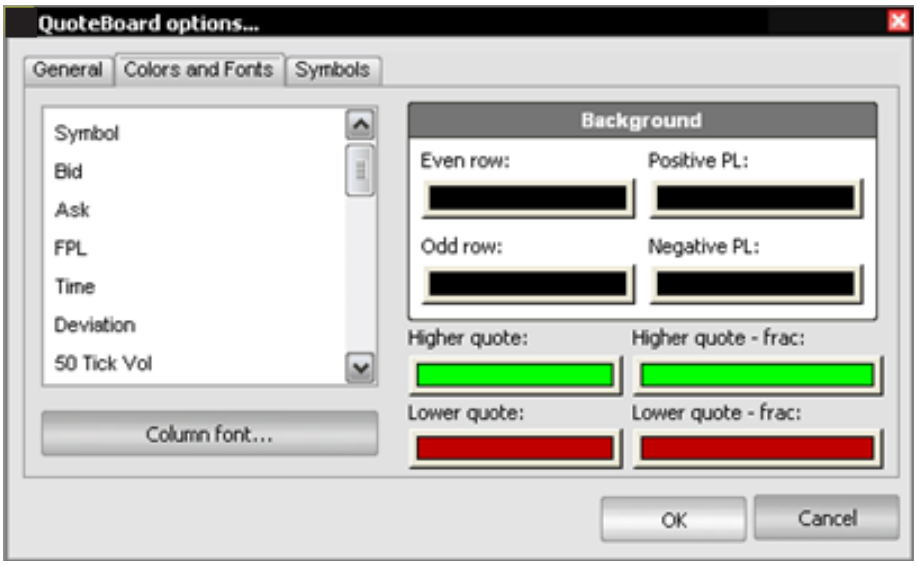


The Symbol Click Action section is where you can choose to display Direct Deal tickets, the Working Orders window or a chart window when you click on an instrument row.
In the Options section, you can activate options to help you gauge market moves.

- **Show Trend Arrow** checkbox adds the market direction arrow to the Quote Board.
- **Enable Glow Timer** highlights numbers in the Bid or Ask column when the price changes. The numbers fade back to normal as the time between updates increases. This allows you to see quickly which markets are the most active.

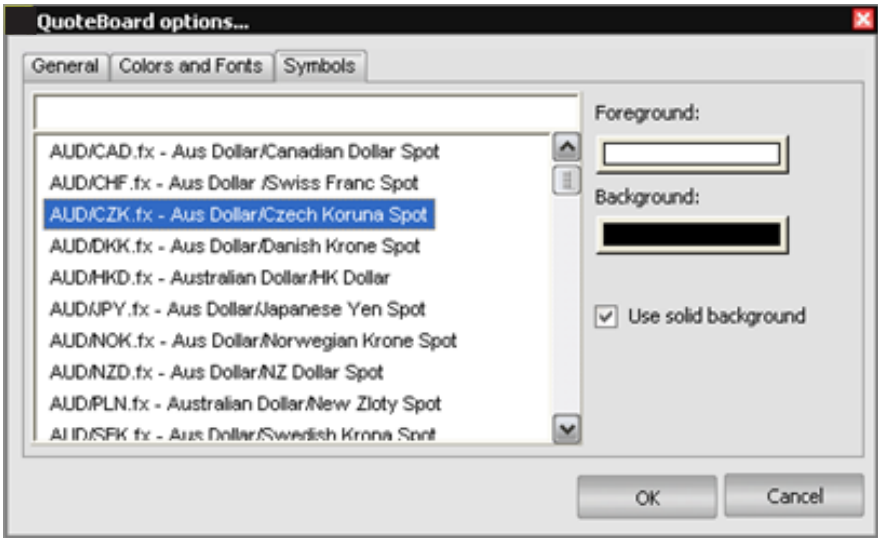
- **Enable Background Blinking** makes the row flash when active.
- **Enable Row Selection** highlights the row you clicked on in the Quote Board.

On the Colours and Fonts tab, you can change the font style and background colour settings for each column in the Quote Board.



If you're trading currency pairs and you want to hide the fractional pip value in the Quote Board, you can change the colour of the **Higher Quote – frac** and **Lower Quote – frac** to match the background colour of the Quote Board row.

On the Symbols tab, you can specify the font colour and colour of each instrument that appears in the Quote Board.



MANAGING INSTRUMENTS IN THE QUOTE BOARD

You can add, edit or remove instruments in the Quote Board by right-clicking in the window and selecting one of the following menu options from the drop-down menu.

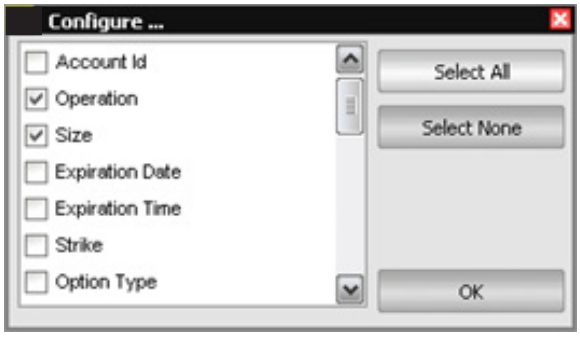
Edit Instrument replaces an existing instrument symbol for another. Once you select this, you can use the drop-down menu to select another instrument.

Insert Instrument adds a row to the Quote Board and displays the drop-down menu, so you can select another instrument.

Delete Instrument removes the row from the Quote Board.

CHANGING SETTINGS IN THE OPEN POSITIONS WINDOW

You can customise the appearance of the Open Positions window and the information about the open positions that appear in it by right-clicking in the window and clicking on the **Configure**… menu option. This opens the Configure Open Positions window.



You can click to check or uncheck the options you want to see as column headings in the window. You can also click **Select All** to choose all options or **Select None** to remove the checks from the checkboxes.

CHANGING SETTINGS IN THE WORKING ORDERS WINDOW

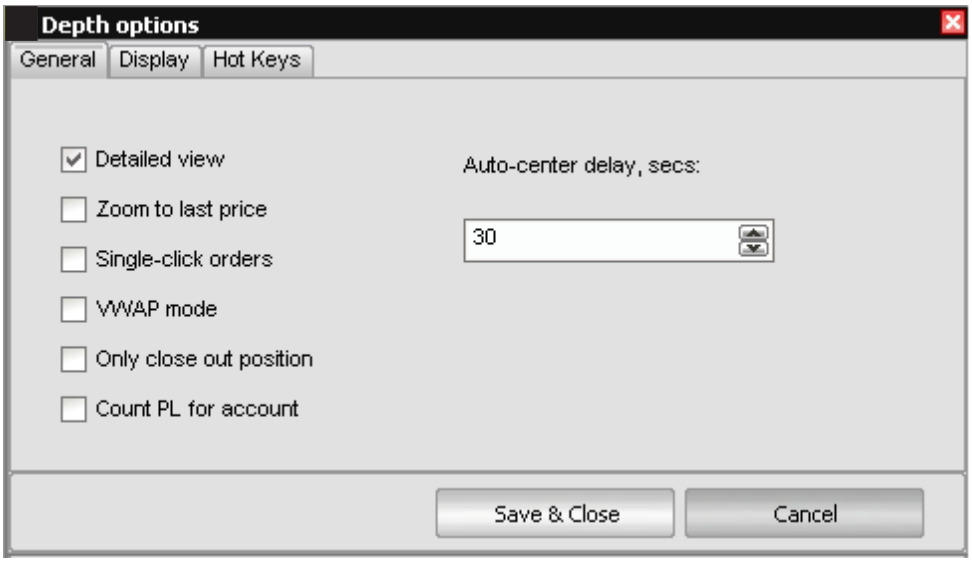
You can customise the appearance of the Working Orders window and the information about the working orders that appear in it by right-clicking in the window and clicking on the **Configure**… menu option. This opens the Configure Working Orders window.

You can click to check or uncheck the options you want to see as column headings in the window. You can also click Select All to choose all options or Select None to remove the checks from the checkboxes.

When the market has hit the price of your stop or limit and the working order is about to become an open position, checking the Blinking Pending Orders checkbox makes the row of the working order flash before it becomes active. You can also select the colour you want it to flash by clicking on the colour swatch.

CUSTOMISING DEPTH 360

You can modify the appearance and the behaviour of the menu options that appear in the Depth 360 window. To do this, right-click in the pricing table and select Options… from the drop-down menu.
This opens the Quick Access Options window. The window is divided into three tabs.
The General tab displays options to specify settings in the Depth 360 window.



Check **Detailed View** so that the Depth 360 window always opens with the pricing table displayed.

Check **Zoom to Last Price** to make sure **Magnify** is on when you first open Depth 360.

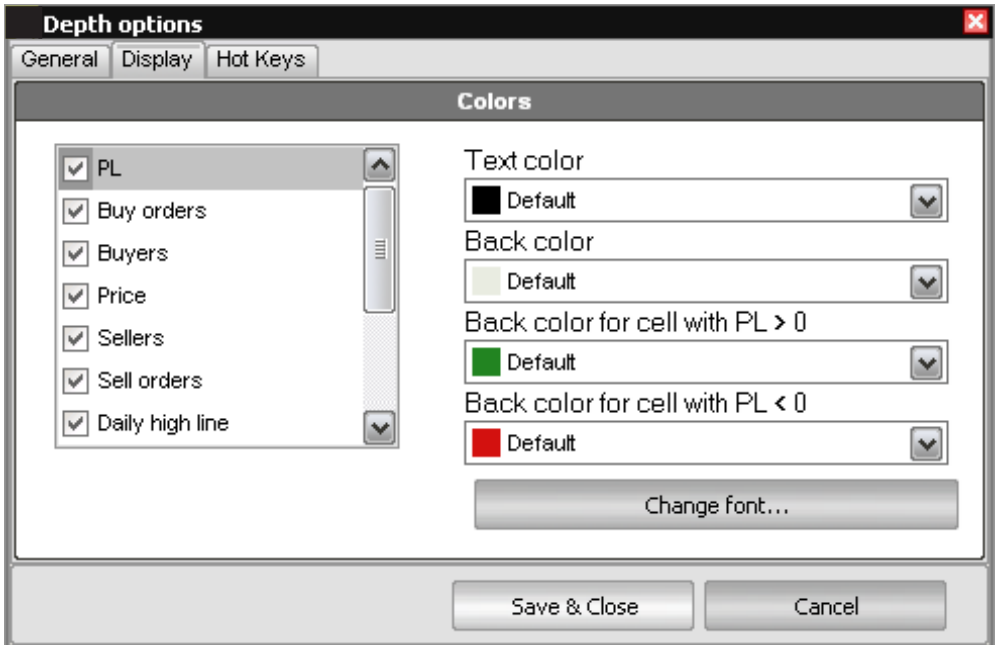
If you do not want to confirm your orders after you place them, check **Single-click Orders.**

Check **VWAP Mode** if you want Depth 360 to show the volume weighted average price (VWAP).

Check **Only Close Out Position** when you want the Flatten menu option to close only your open positions.

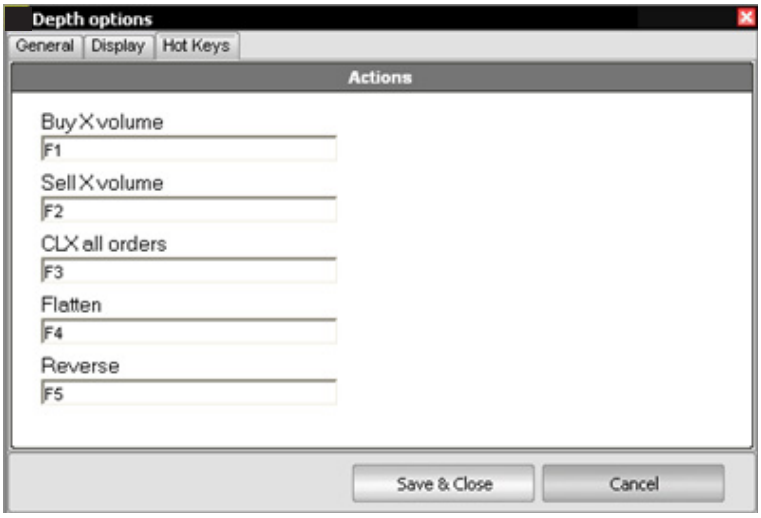
Check **Count PL for Account** shows the net trades for a particular account.

The Display tab allows you to specify settings for the appearance of the Depth 360 window.



The checklist allows you to display fields and other highlights in the price table. You can change the appearance of the font by clicking the Change Font button. You can also change the text colour for the table by clicking to access a drop-down menu of colours.

The Hot Keys tab allows you to specify which keys on your computer keyboard you can use to place orders instantly.



When you first open IronFX Multi-Asset Trader, Depth 360 is set up so you can click F1 to place a buy order, F2 to place a sell order, F3 to close all working orders, F4 to flatten all orders, or F5 to reverse all orders.

ADDING TOOLS TO THE DASHBOARD

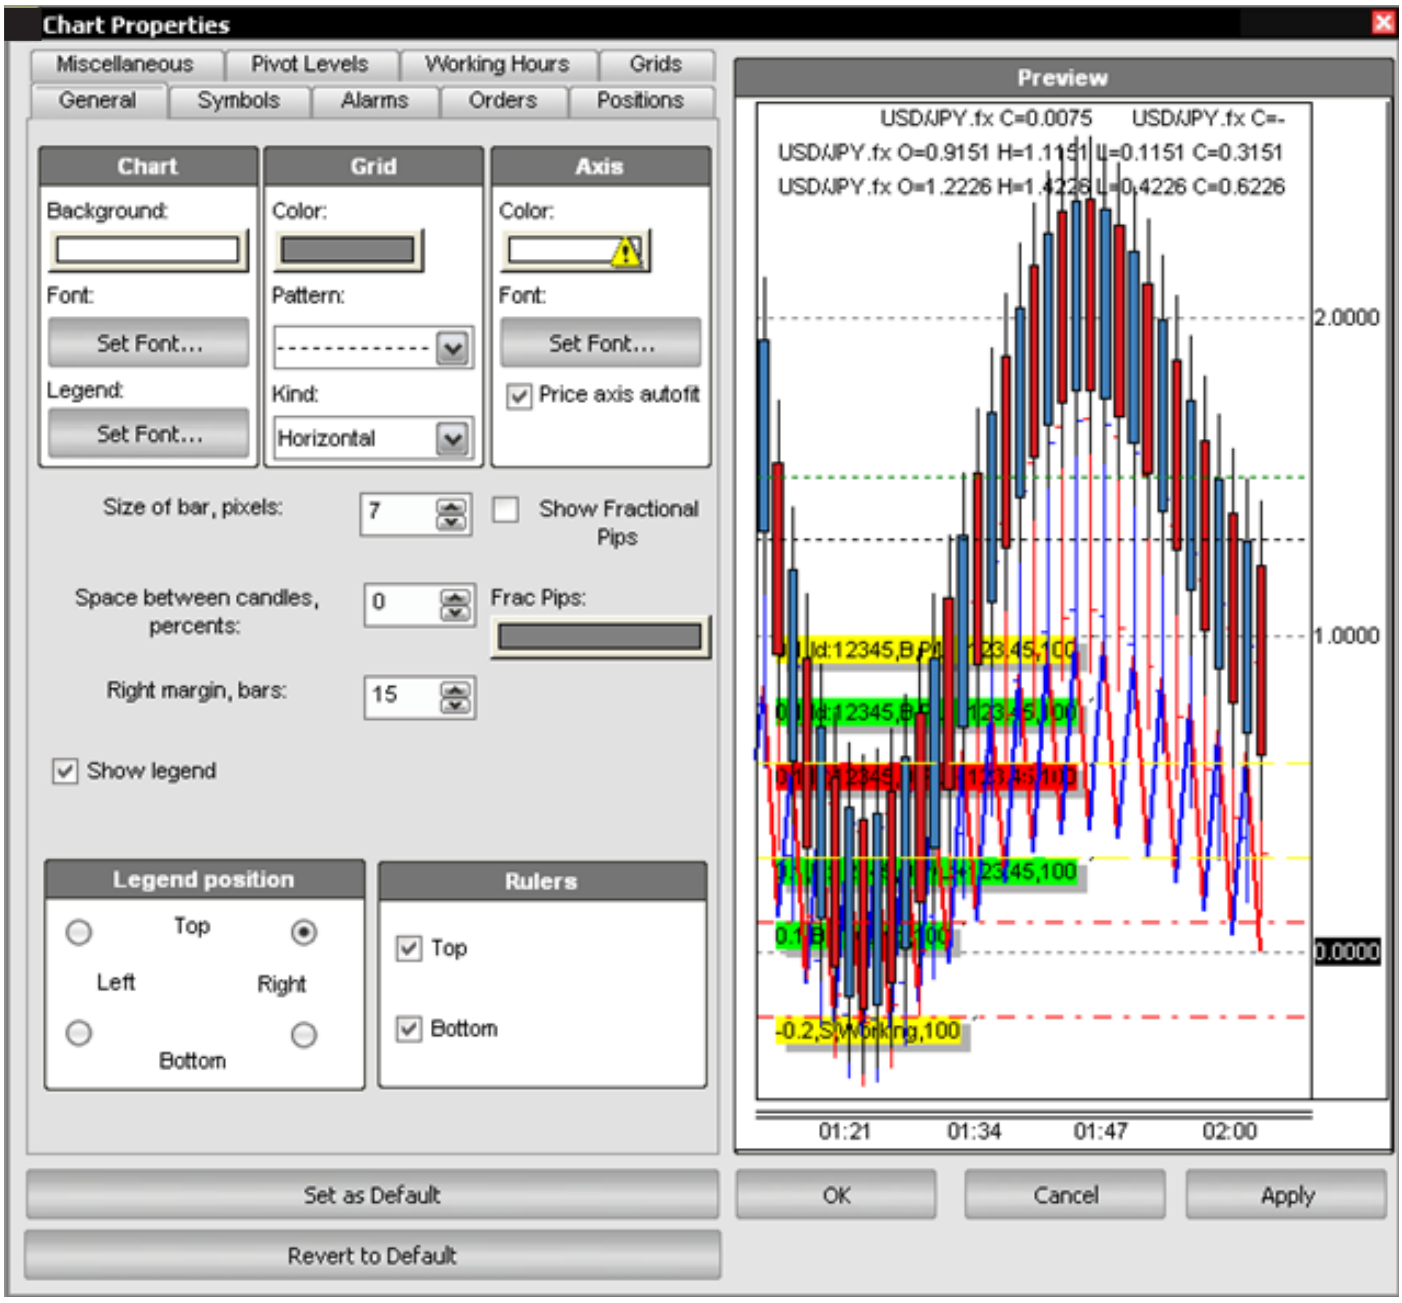
You can select the windows you often work with and place them within the Dashboard. You can place a window in the Dashboard in two different ways.

- You can right-click in the Dashboard and select **Add to Dashboard**. You can then select the window you want to add from the drop-down menu.

- You can also right-click in the window you want to add and, when the Dashboard is open, choose **Place to Dashboard.**

SETTING CHART PROPERTIES

You can change the setup of the chart window by clicking on the horizontal toolbar. This opens the Chart Properties window.



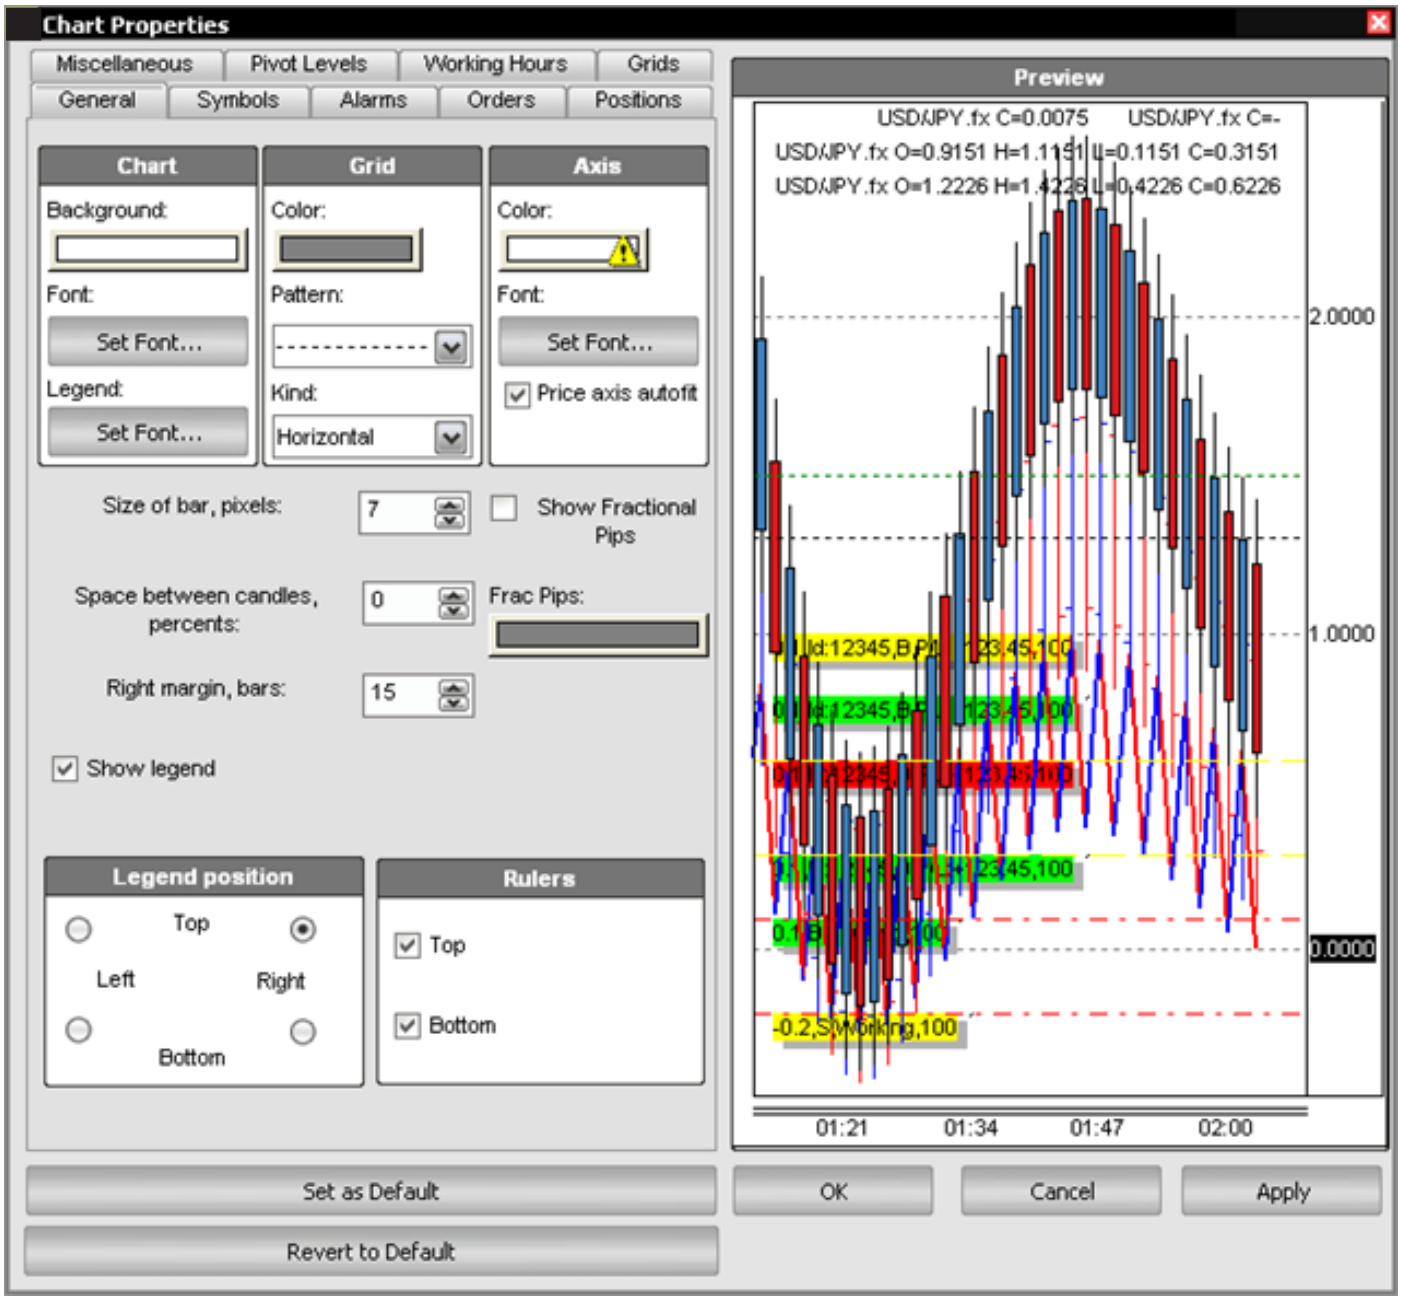
This window organises the various settings for the chart window on several tabs. In this topic, you'll see how to specify features on each tab. When you're done, making your changes, click **Apply** and then **OK** in the lower right side of the Chart Properties window.

If you make a mistake while entering settings, you can click **Revert to Default** to restore all of your settings to the original ones. If you want all charts to use the settings you just entered, you can click **Set as Default**.

CHANGING CHART APPEARANCE ON THE GENERAL TAB

On the General tab of the Chart Properties window, you can specify settings, such as background colours or font, for the chart, grid and axis of the chart window. You can also select properties for the legend, chart rulers and other features.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange



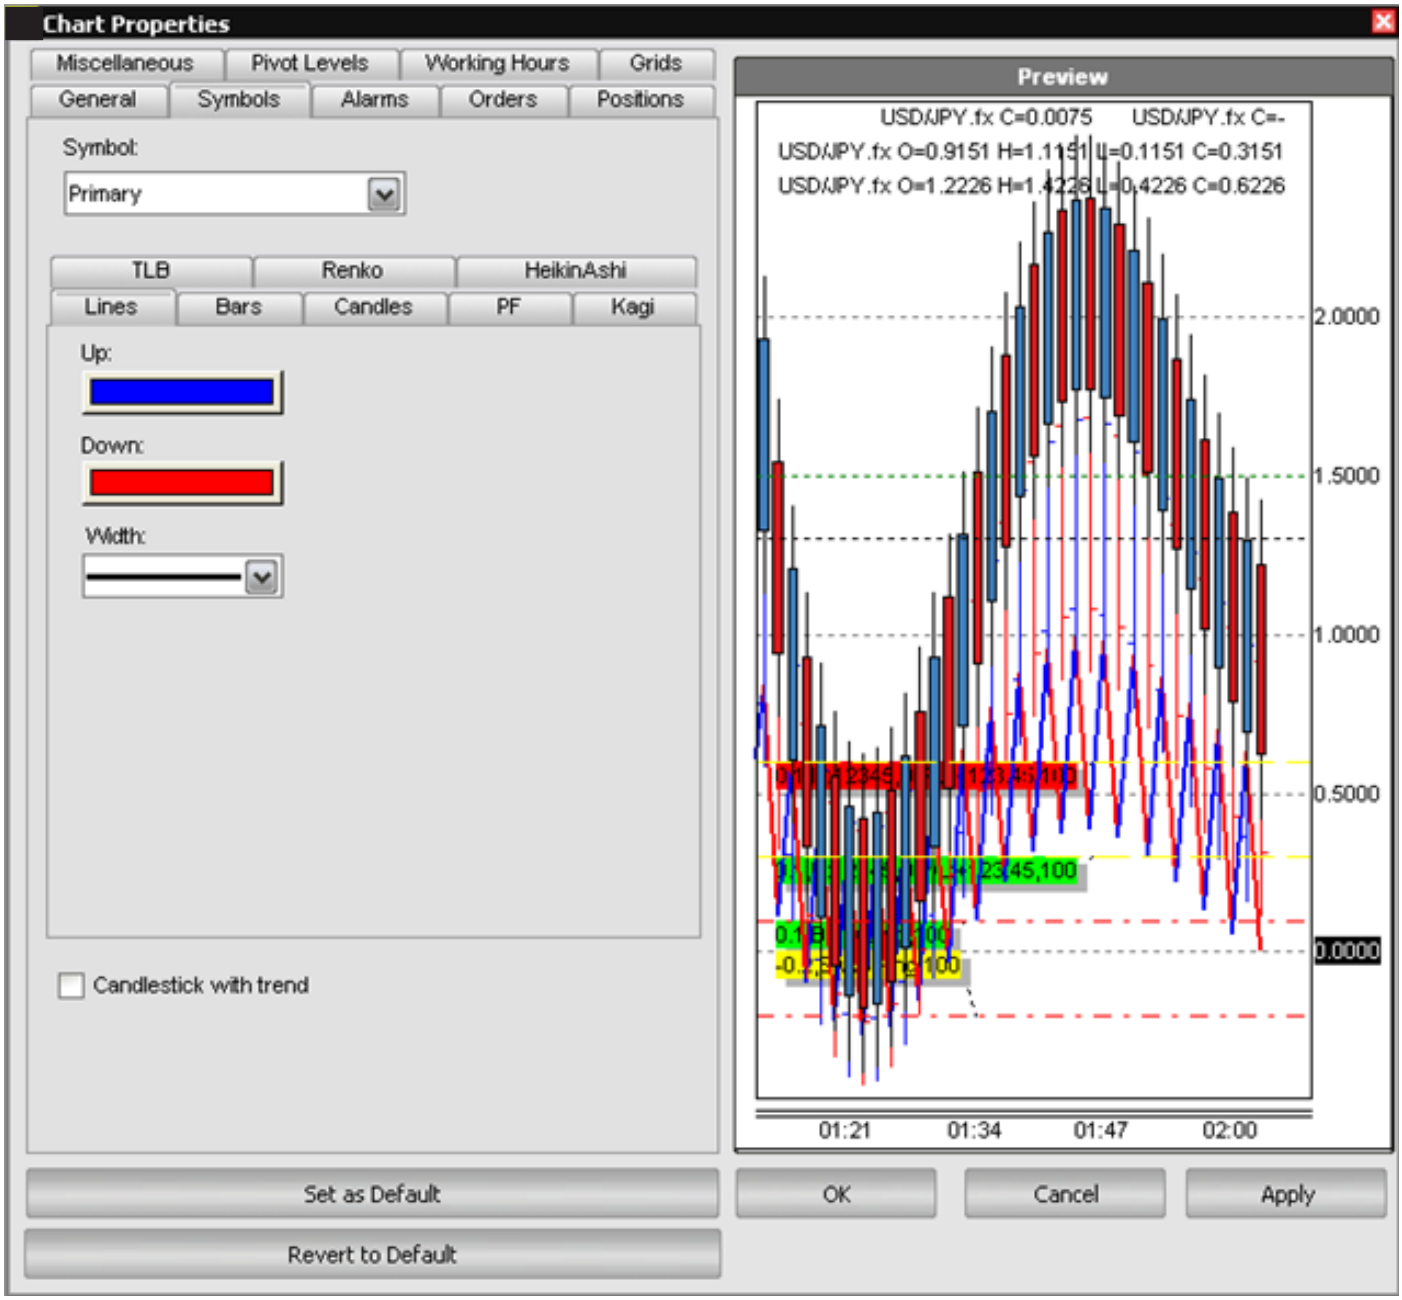
IronFX Multi-Asset Trader displays a caution sign when a selected colour is too similar to another on the chart. In the example for the General tab above, the colour for the Axis is too close to the background colour of the chart.

If you want to hide the fractional pip value in the chart prices, make sure that the **Show Fractional Pips** checkbox is unchecked.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

SPECIFYING CHART TYPE SETTINGS ON THE SYMBOLS TAB

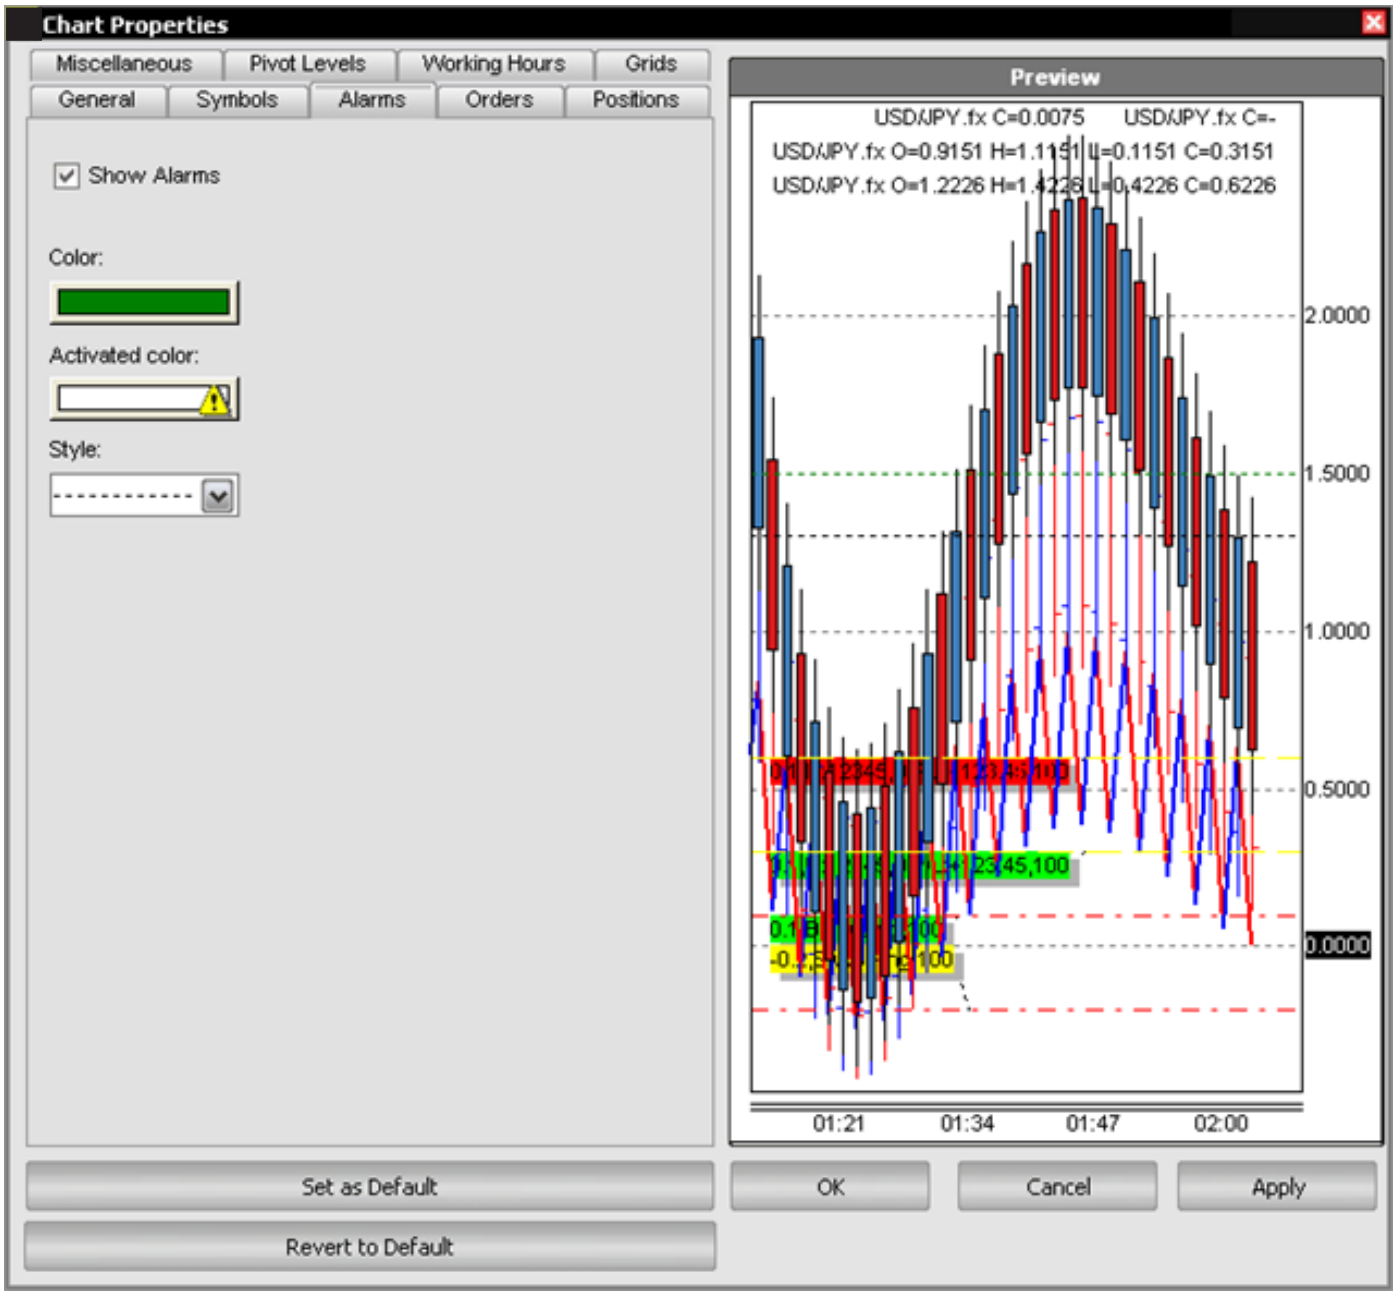
On the Symbols tab of the Chart Properties window, you can specify colour and view settings for the different chart types in IronFX Multi-Asset Trader. You can select the tab for the chart symbol (Lines, Bars, Candles, PF, Kagi, TLB, Renko and HeikinAshi) and specify colours for up and down movements as well as specify line width.



IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

SPECIFYING ALARM SETTINGS FOR THE CHART ON THE ALARMS TAB

The Alarm tab of the Chart Properties window is where you can choose to show the alarms you set as lines in the chart. You can also specify line style and colour.

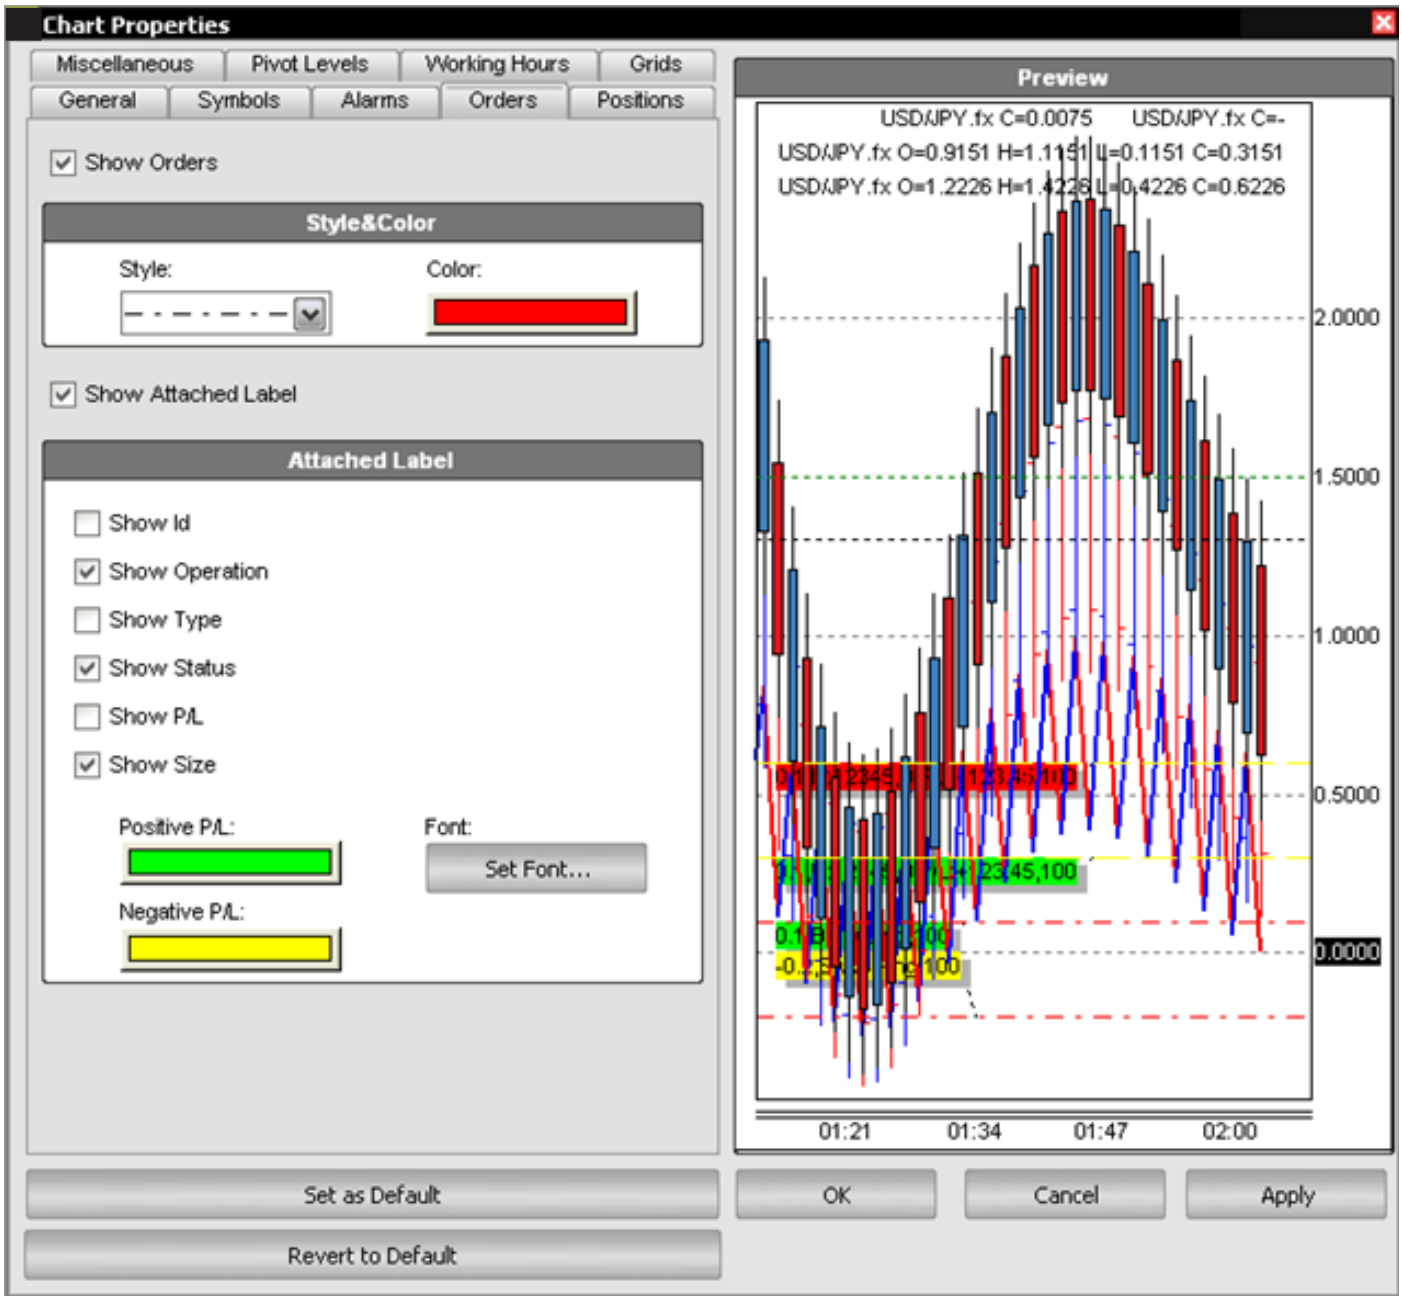


You can also specify settings for the Alarms in the Configure Parameters window. See Specify Alarm Notification Settings in the Alarms Tab.

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

SPECIFYING ORDER SETTINGS FOR THE CHART ON THE ORDERS TAB

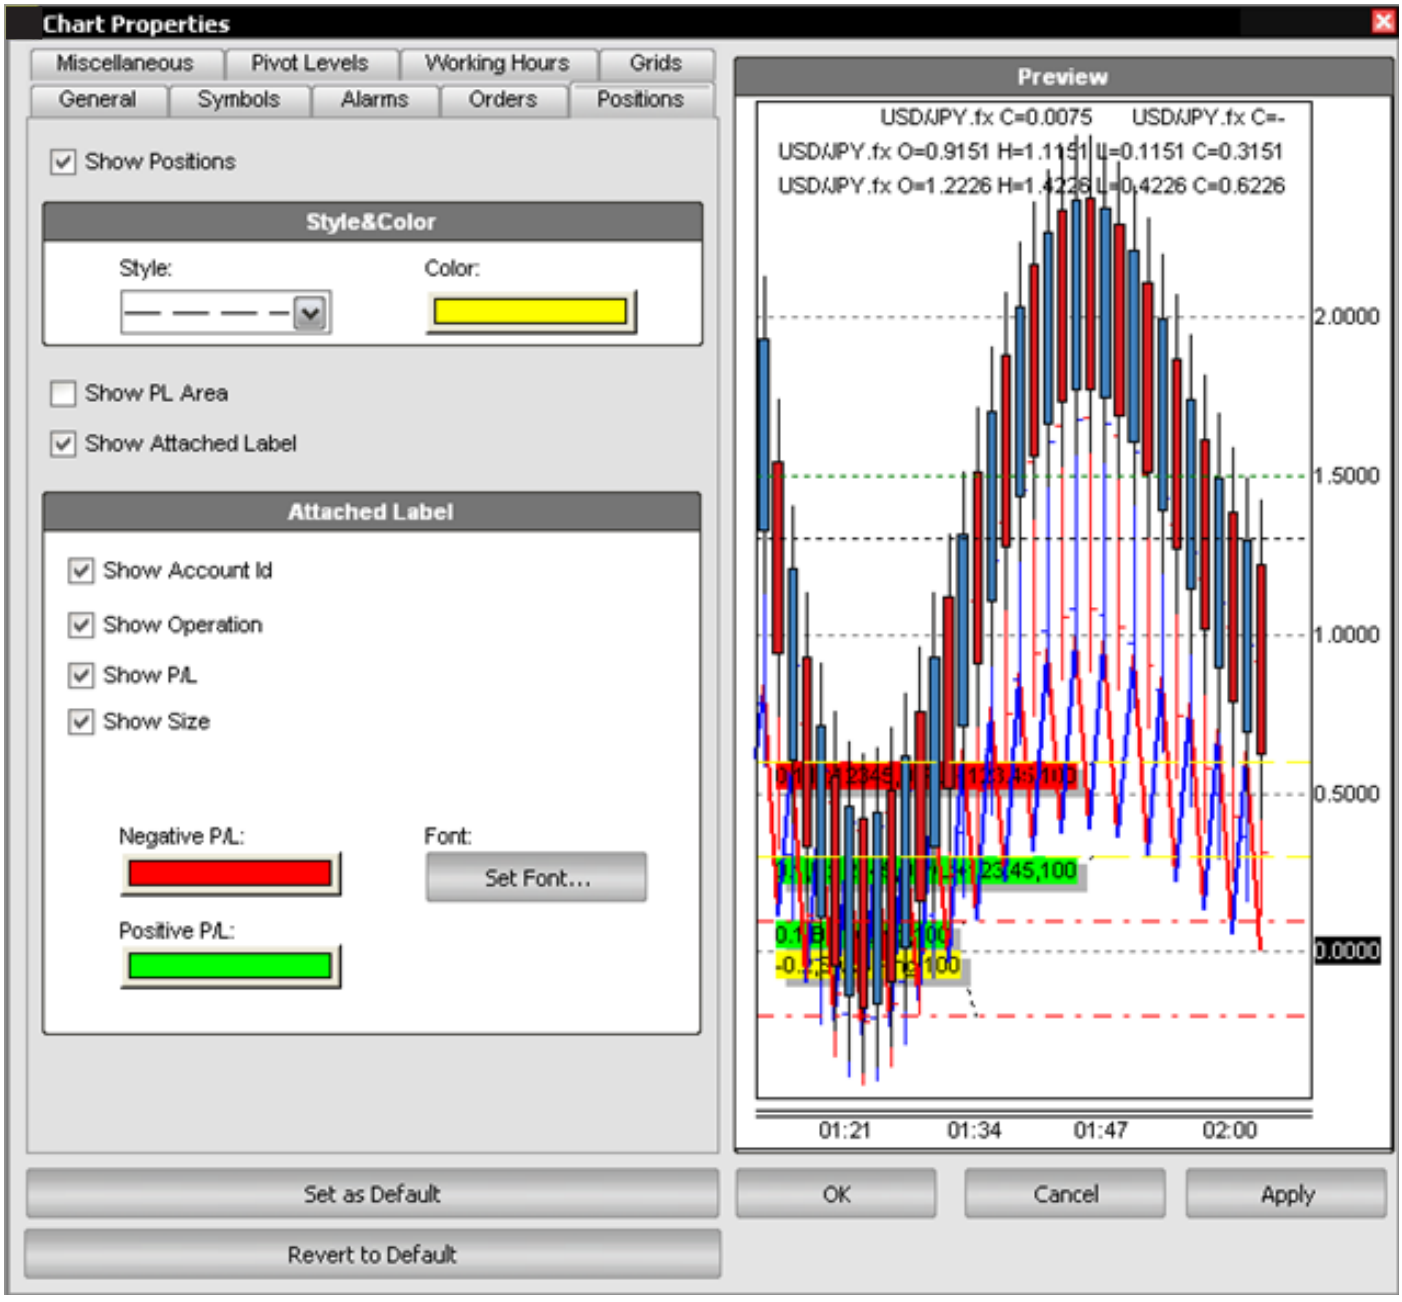
On the Orders tab of the Chart Properties window, you can choose to display working orders as lines on the chart. You can also specify the line style, line colour, label colour, label font and what information appears in the order label.



IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

SPECIFYING POSITIONS SETTINGS FOR THE CHART ON THE POSITIONS TAB

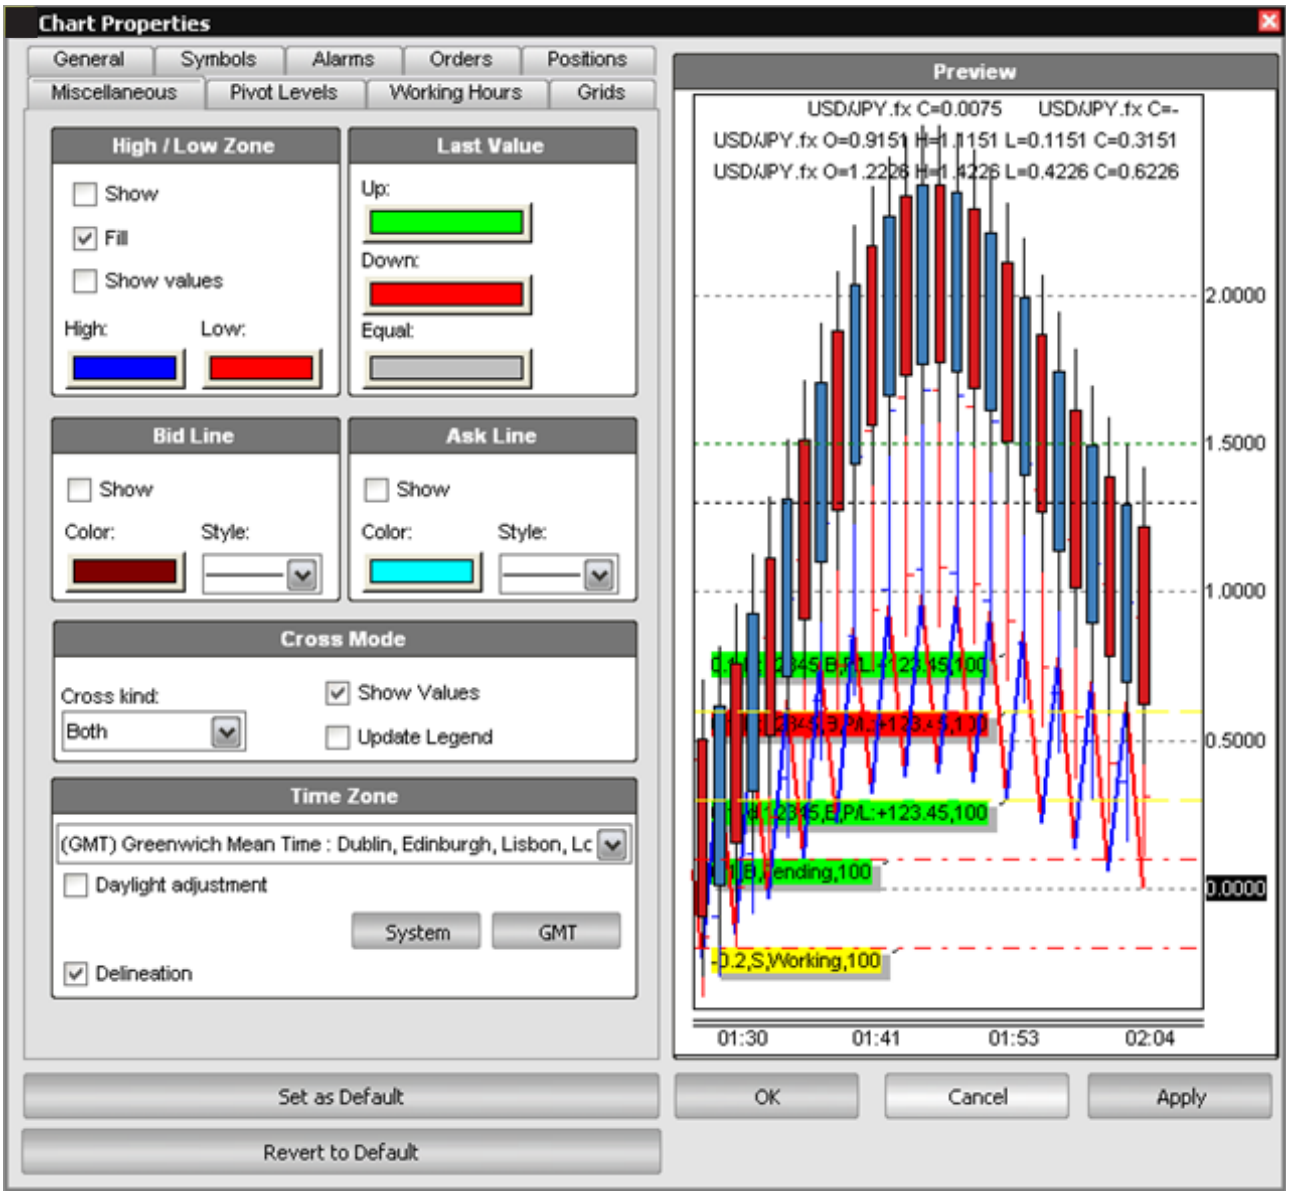
The Positions tab of the Chart Properties window provides options for displaying open positions on the chart. You can specify line style and colours as well as what information appears in the position label.



IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

SPECIFYING TOOL SETTINGS FOR THE CHART ON THE MISCELLANEOUS TAB

On the Miscellaneous tab of the Chart Properties window, you can specify settings for several tools in the chart window.



The High/Low Zone section allows you to activate the high/low zone lines and change the colours of the zones.

You can specify colours for the most recent price quote in the Last Value section.

You can also choose to add lines to represent the bid or ask line on the chart. You can even change their colour and style.

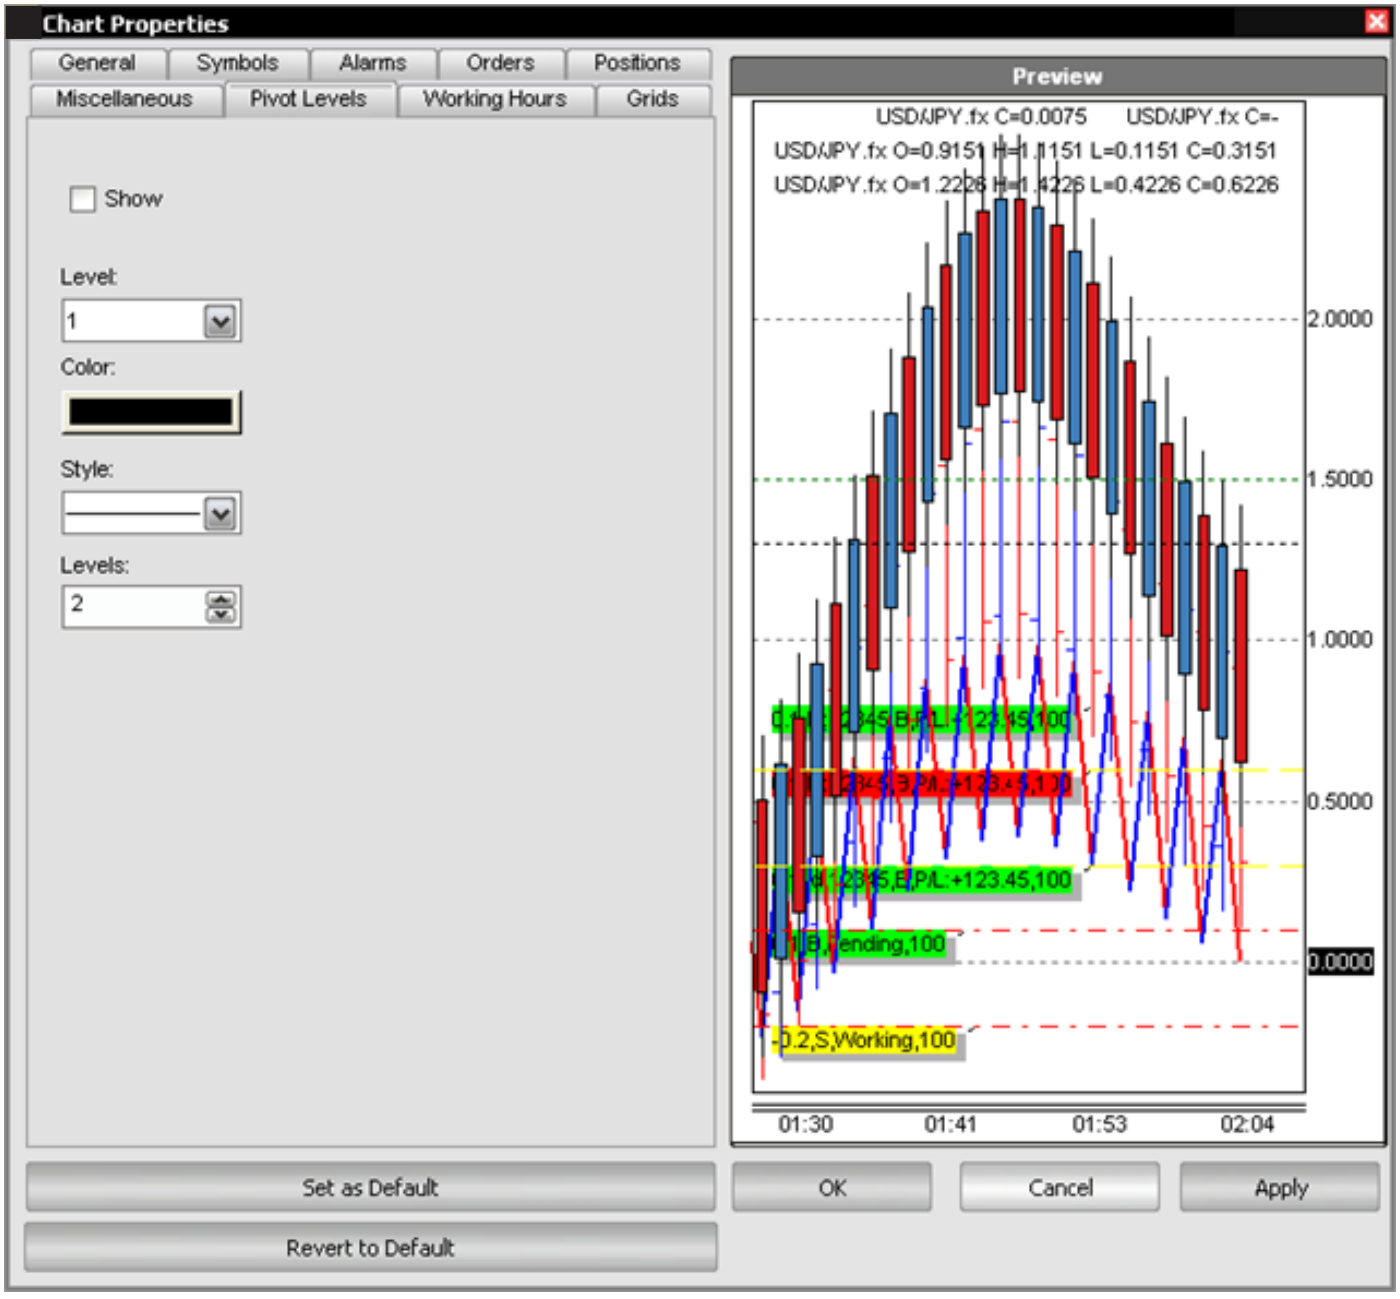
The Cross Mode section displays settings where you can customise the appearance of **Cross** tool.

If you need to change the time zone or turn on Daylight Savings Time on, you can do so in the Time Zone section. When you first open IronFX Multi-Asset Trader, all time is displayed in Greenwich Mean Time (GMT).

IronFX Global is authorised and regulated by
FCA, ASIC, FSB, FSP, CRFIN, UCRFIN, CySEC, MiFID
Member of Eurex Exchange

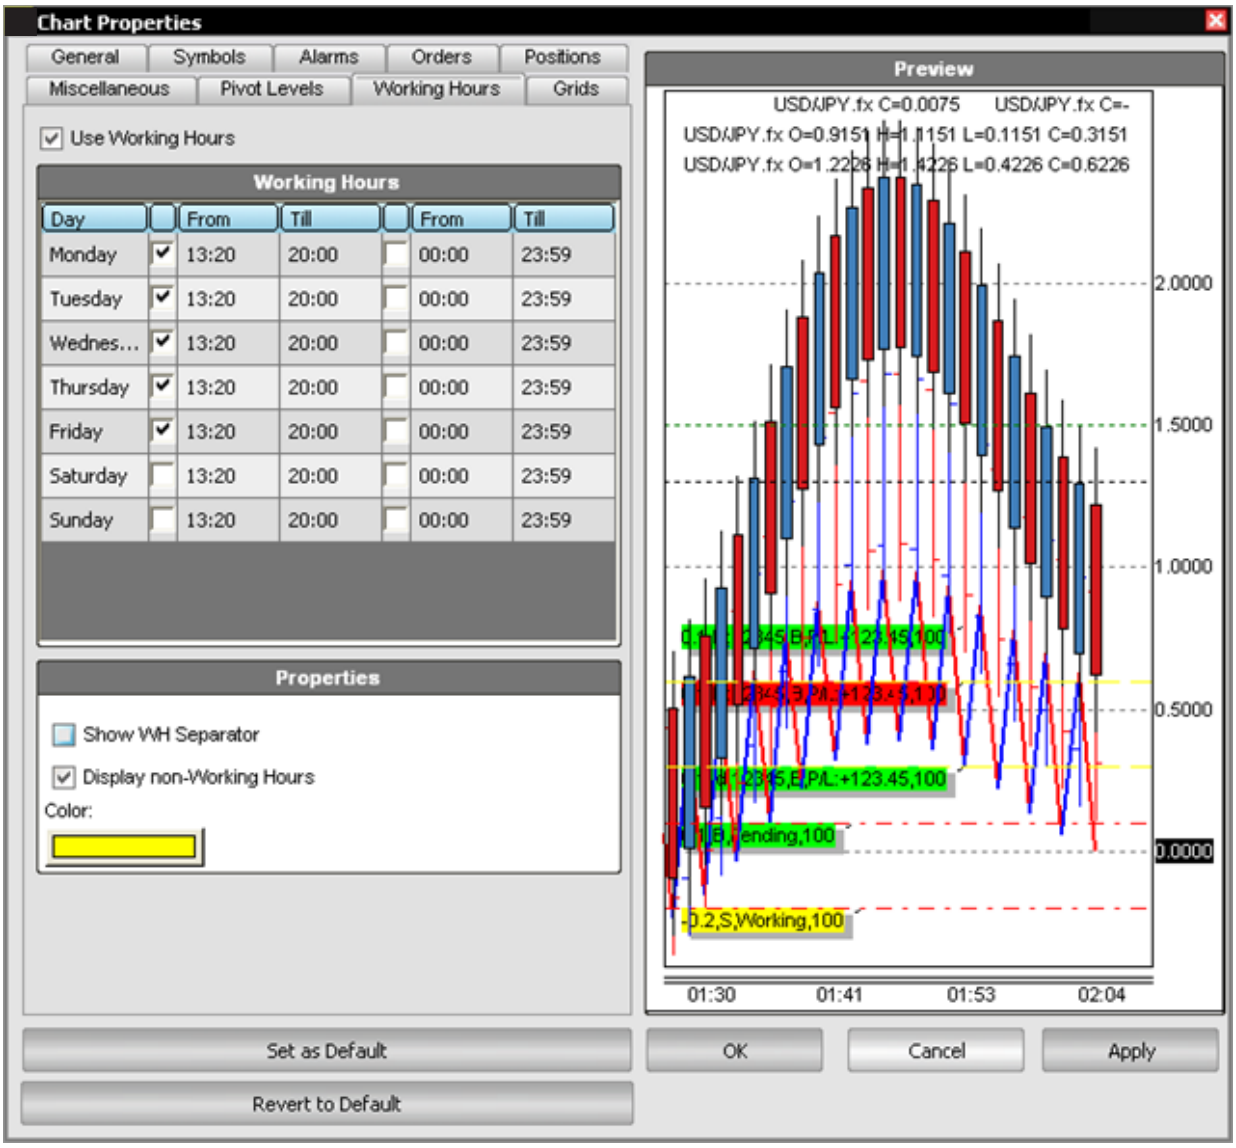
SPECIFYING PIVOT SETTINGS FOR THE CHART ON THE PIVOT LEVELS TAB

On the Pivot Levels tab of the Chart Properties window, you can choose to display the pivots and change the settings of the pivot line style, colour and level.



SPECIFYING CHART TIMES IN THE WORKING HOURS TAB

The Working Hours tab of the Chart Properties window allows you to set start and end hours for trading on specific days. You can use this feature to set self-imposed limits to your trading hours.



When you check the **Use Working Hours** checkbox, you can only place trades during the times you set.

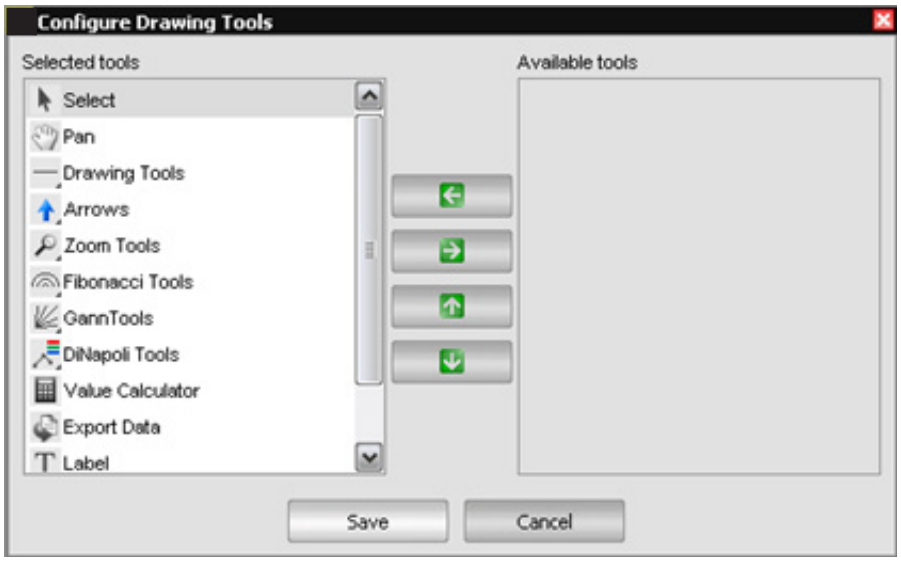
Outside of working hours, you can only view data on the chart, if **Display Non-Working Hours** is checked. You can click on the checkboxes to select days and click in the **From** and **Till** columns to specify times.

You can also choose to display a separator in the chart that shows when working hours are active by clicking **Show WH Separator.**

When you first open IronFX Multi-Asset Trader, Working Hours are set to 13:20 GMT to 20:00 GMT, Monday through Friday (the time of the New York market).

CONFIGURING THE DRAWING TOOLBAR IN THE CHART WINDOW

You can modify which tools appear in the Drawing toolbar in the chart window by using the Configure Drawing Tools window. To open this window, right-click in the chart and select **Configure Drawing Toolbar**.



The Selected Tools section displays the tools that are currently displayed in the toolbars.

The Available Tools section displays the tools that can be added to the toolbar.

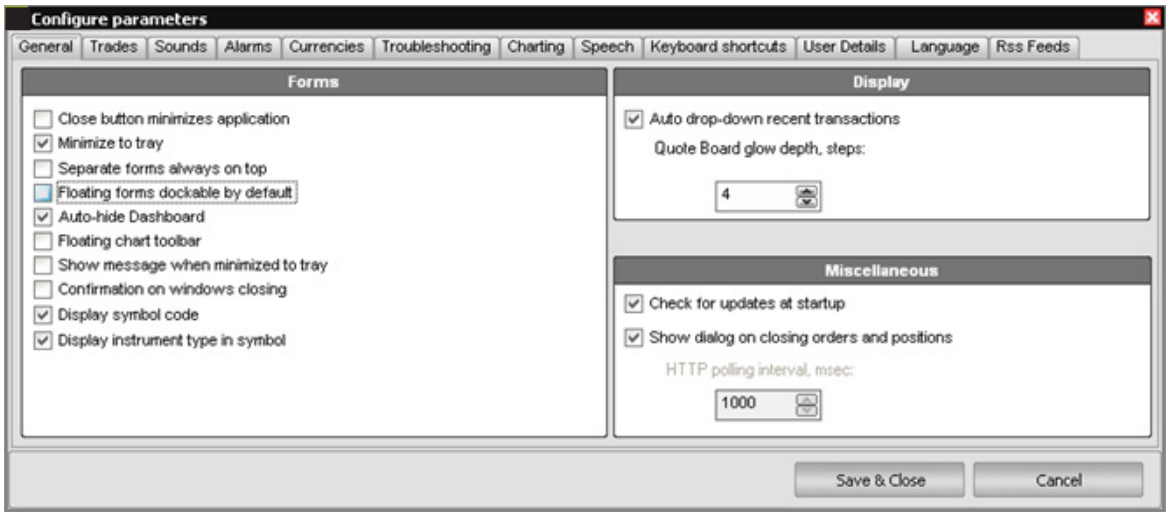
- Use the right or left arrow to move the select tool between the Selected Tools and Available Tools lists.
- Use the up or down arrows to change the order of the selected tool in the toolbar.

CONFIGURING THE DRAWING TOOLBAR IN THE CHART WINDOW:

1. Right-click in the chart window and select **Configure Drawing Toolbar**…
2. Select the tool you want.
3. Click the arrow you want.
4. Continue to select tools and move as desired.
5. Click **Save**.

SPECIFYING IronFX MULTI-ASSET TRADER USER SETTINGS

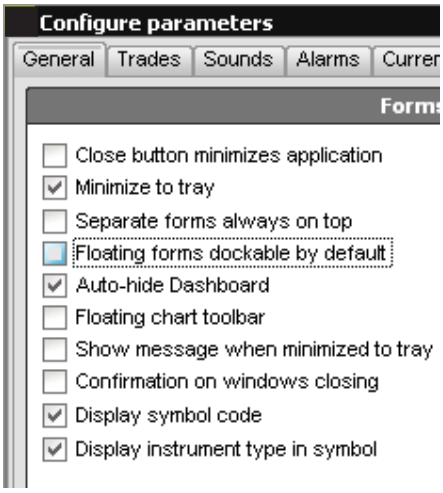
You can customise IronFX Multi-Asset Trader features and tools using the Configure Parameters window. You can open this by clicking **Configure** from the **File** menu and selecting **Parameters**.



This window organises the various settings for IronFX Multi-Asset Trader on several tabs. In this topic, you'll see how to specify features on each tab. When done, click **Save & Close** at the bottom of the window to view the changes in IronFX Multi-Asset Trader.

SPECIFYING FORM SETTINGS IN THE GENERAL TAB

The General tab of the Configure Parameters window is where you can specify settings for the New Order window, Dashboard, and other windows.



You can set IronFX Multi-Asset Trader to minimise the application when you click X in its windows by putting a check next to **Close Button Minimises Application**. You can also choose to minimise the application and display an icon in your system tray by clicking **Minimise to Tray**.

If you plan on using the Separate Windows menu option, you can click the **Separate Forms** Always on Top. This displays all separate windows on top of other applications.

The **Floating Forms Dockable by Default** option enables you to click and place windows on the top, bottom, left or right side of the IronFX Multi-Asset Trader workspace.

When you click the **Auto-hide Dashboard**, you can choose to hide the Dashboard on the top, bottom, left or right side of the IronFX Multi-Asset Trader workspace and have it reappear when you move your cursor over that area.

You can also choose to display the toolbars in the chart window as floating toolbars by clicking the **Floating Chart Toolbar** option.

When Multi-Asset is minimised, it appears in your system tray, but not in task bar. When you check **Show Message When Minimised** to Tray, a pop-up window appears when you minimise, informing you that the application appears in the system tray.

If you find that you accidentally close windows, you can select the **Confirmation on Windows Closing** checkbox. This displays a confirmation message before you close any of the windows in your layout.

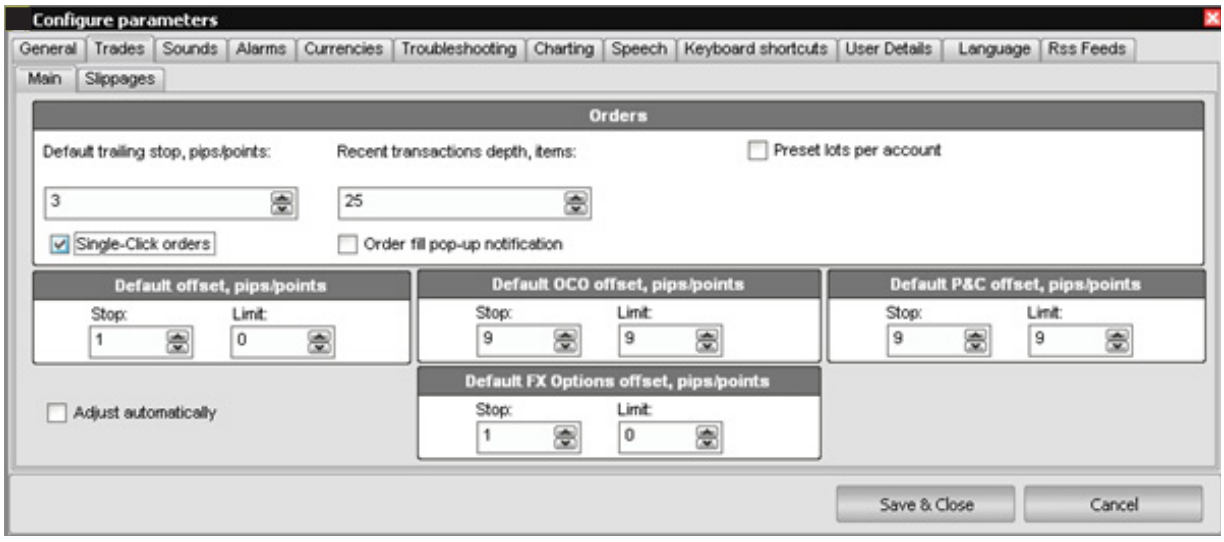
You can also specify whether you want to view the symbol code and the instrument type in the symbol by checking **Display Symbol Code** or **Display Instrument Type in Symbol**.

In the Display section, you can choose to view recent transactions in the drop-down menu. You can also specify over how many points or pips the glow timer shines or dims.

In the Miscellaneous section, you can choose settings to update the IronFX Multi-Asset Trader software whenever you open it or specify how many price points appear in the chart window when you first open it.

SPECIFYING ORDER SETTINGS IN THE TRADES TAB

The Trades tab of the Configure Parameters window displays settings for placing orders in IronFX Multi-Asset Trader. It displays two tabs under it. On the Main tab, you can specify settings that will appear whenever you place an order.



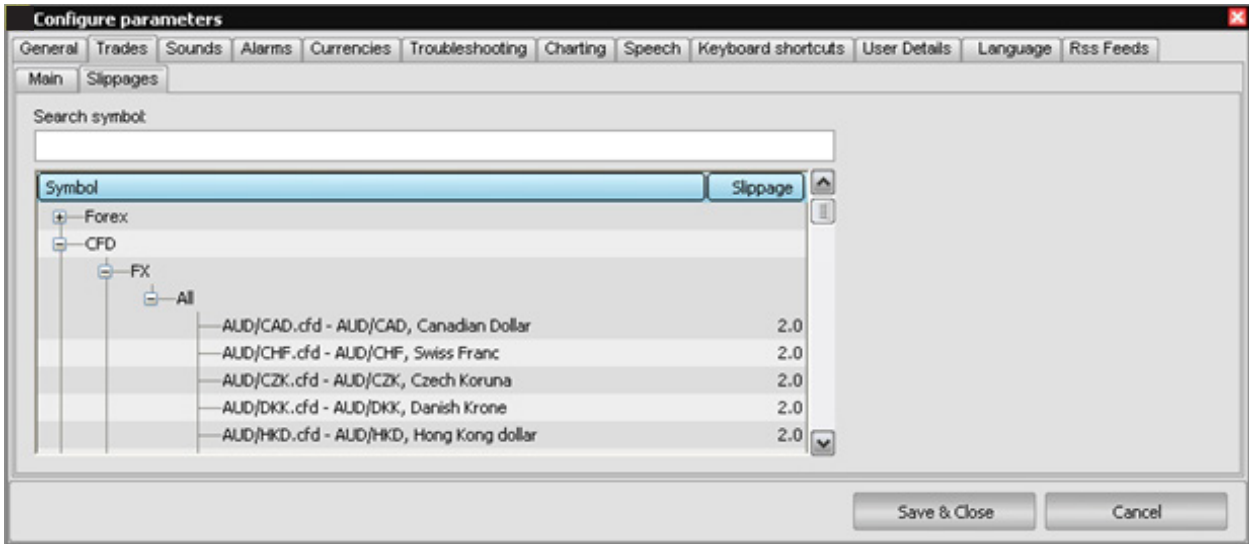
In the Orders section, you can set the number of pips or points that appear whenever you select the trailing stops options.

You can also check **Single-click Orders** so that it's always selected when you open Direct Deal tickets or the New Order window.

You can also set the number of pips or points of the offset in OCO or Parent and Contingents orders.

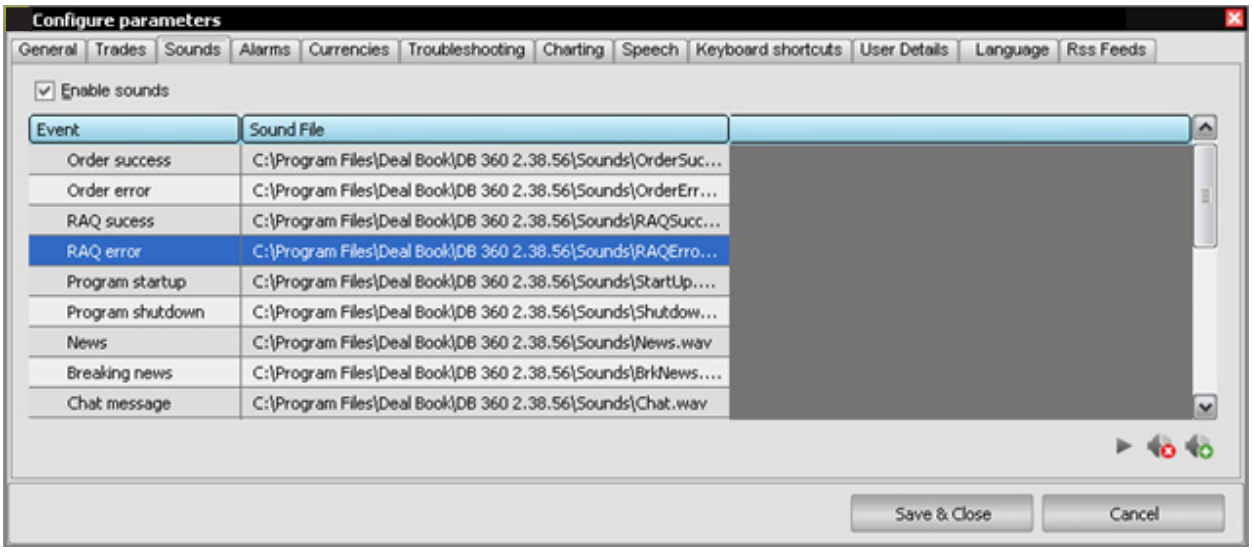
For more information on the default FX Options section, see Specifying FX Option Order Settings in the Trades Tab.

On the Slippages tab, you can view a list of instruments and specify the slippage threshold for each one. You can enter pips or points.



SELECTING SOUND FILES FOR IRONFX MULTI-ASSET TRADER IN THE SOUNDS TAB

The Sounds tab of the Configure Parameters window displays a list of IronFX Multi-Asset Trader actions that play a sound file when active. You can also view the file location for each one.

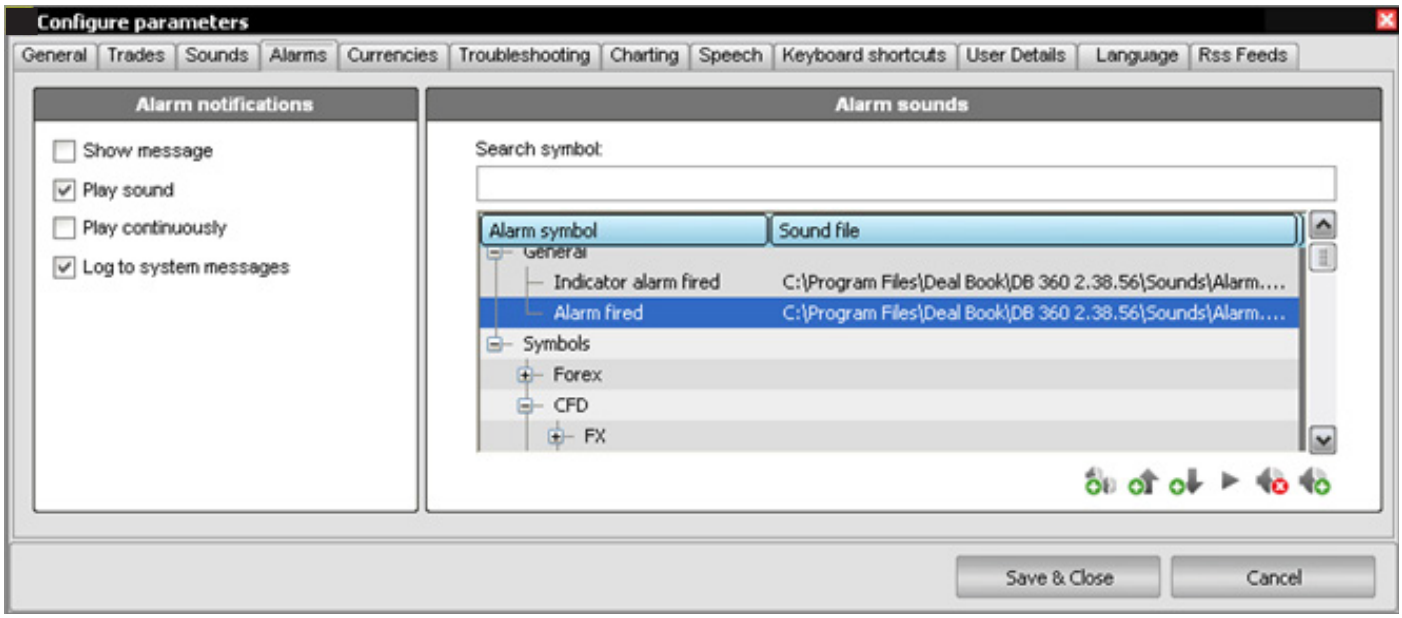


Check the **Enable Sounds** checkbox so IronFX Multi-Asset Trader will play sounds. When unchecked, IronFX Multi_Asset Trader deactivates all sound files and sound tools in the application.

IronFX Multi-Asset Trader comes with several sound files. You can add your own by downloading them to the Sounds folder installed with IronFX Multi-Asset Trader or you can navigate to where they sounds are on your computer.

SPECIFYING ALARM NOTIFICATION SETTINGS IN THE ALARMS TAB

The Alarms tab of the Configure Parameters window is where you can specify settings for alarm notifications. You can also view the alarm type and the sound file associated with it. If desired, you can even replace the sound file for the selected menu option with another.



You can select an application action in the Alarms Sounds section and use the following buttons to:

Play the currently applied sound file for that selection.

Remove the sound files from that selection.

Open the Browse window so you can select a sound file to replace the current sound file.

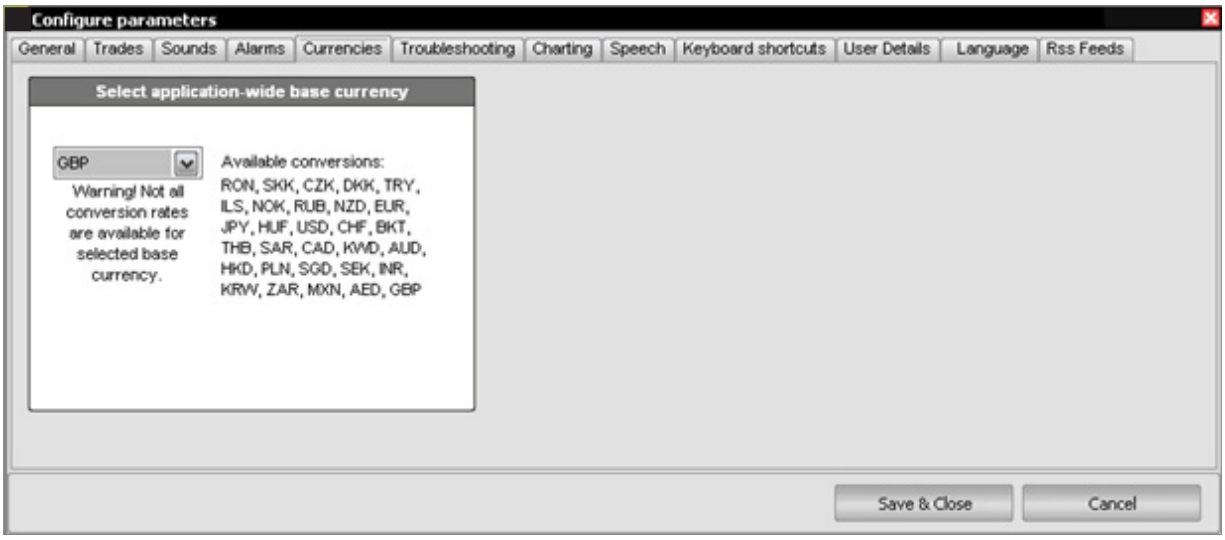
Apply a particular sound file to all events in IronFX Multi-Asset Trader.

Apply a particular sound file to the currently selected event and all events in the list above it.

Apply a particular sound file to the currently selected event and all events in the list below it.

SPECIFYING THE BASE CURRENCY IN THE CURRENCIES TAB

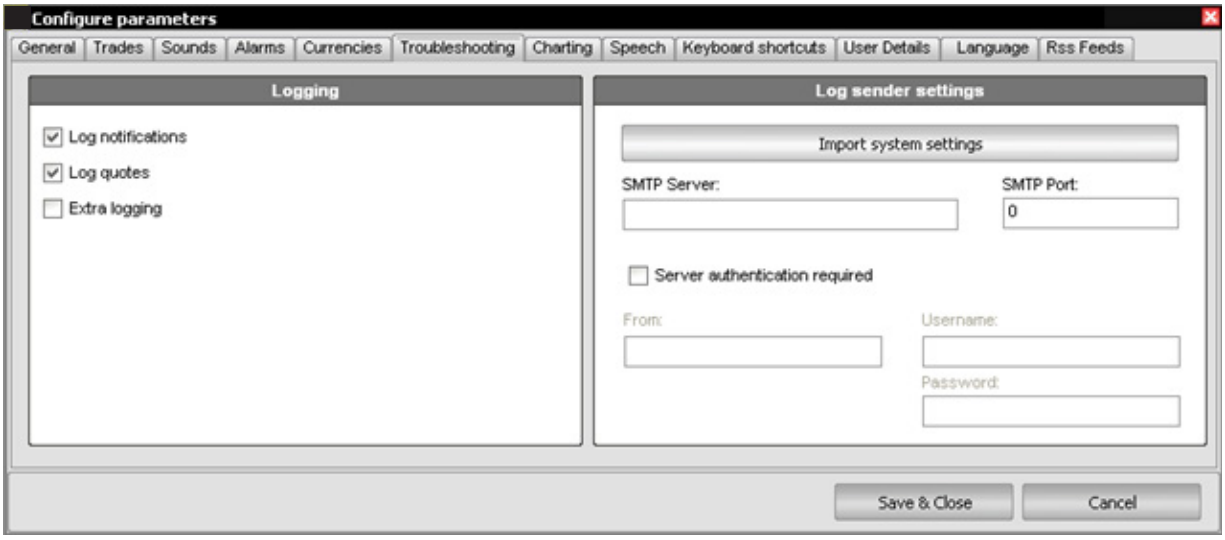
The Currencies tab of the Configure Parameters window allows you to select the base currency for your account.



To select the base currency, click and select a currency from the drop-down menu.

DISPLAYING SETTINGS IN THE TROUBLESHOOTING TAB

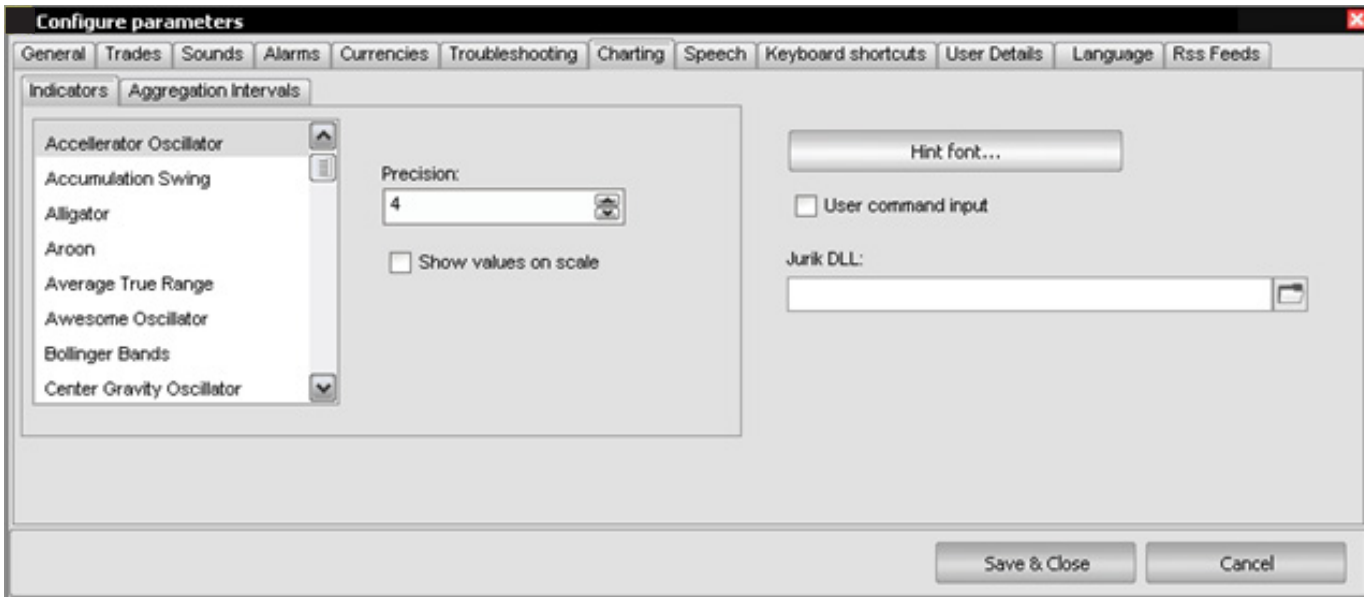
The Troubleshooting tab of the Configure Parameters window displays specifications for logging IronFX Multi-Asset Trader notifications and quotes. You can also view settings for the log sender.



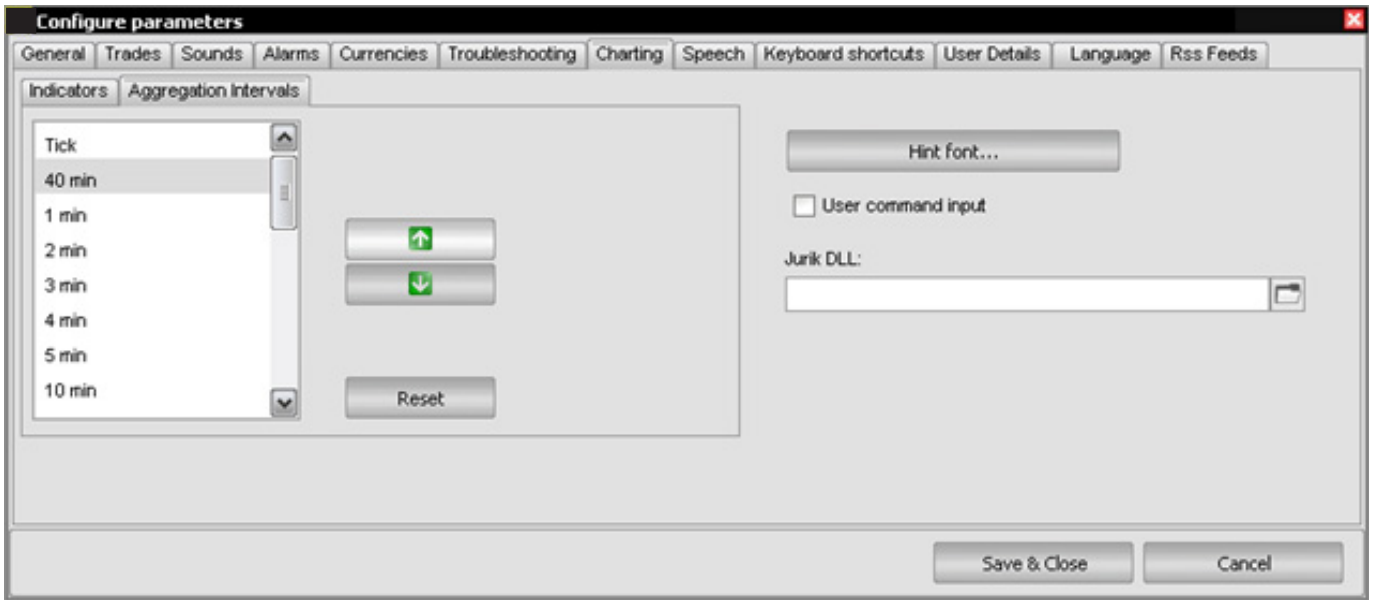
SPECIFYING INDICATOR SETTINGS AND CUSTOMISING THE TIME FRAME MENU ON THE CHARTING TAB

You can use the Charting tab of the Configure Parameters window to specify the standard settings for IronFX Multi-Asset Trader indicators. These appear when you first select the indicator in the Chart Indicators window settings for the log sender.

In the Indicators sub-tab tab, you can scroll through the list, select an indicator and enter settings that will appear whenever you first add the indicator.



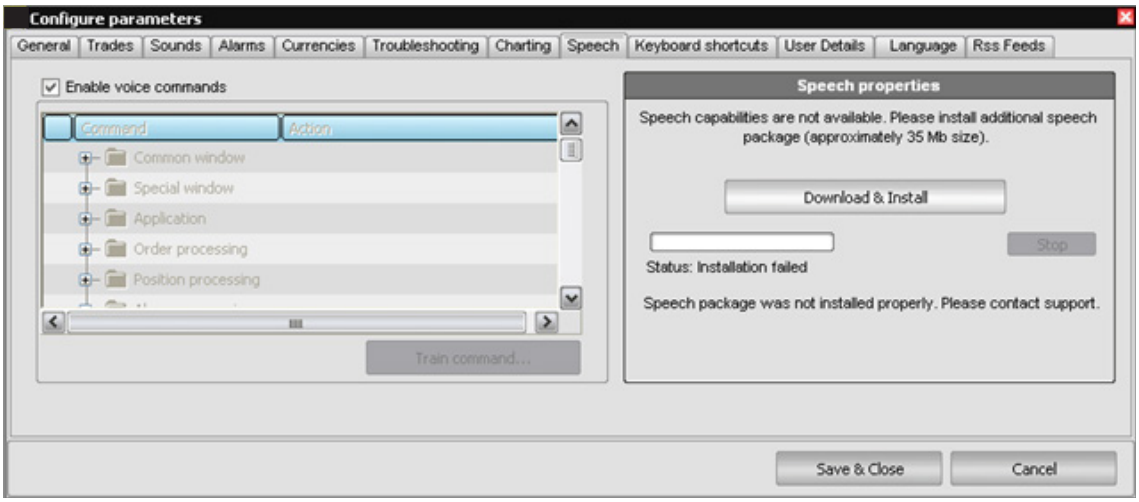
On the Aggregation Intervals tab, you can rearrange the order of the intervals that appear in the Time Frame drop-down menu. Select an interval from the list and click to move the time frame up or click to move the time frame down by one type.



If you need to reorganise the different time frames, you can click Reset.

ACTIVATING VOICE COMMANDS IN THE SPEECH TAB

The Speech tab of the Configure Parameters window allows you to set up voice commands to tell IronFX Multi-Asset Trader how to place trades and view windows.



You can work with IronFX Multi-Asset Trader application using voice commands. You can begin setting this up by clicking the **Enable Voice Commands** check box.

If you are setting up voice commands for the first time, you'll want to click **Download & Install**. This installs the IronFX Multi-Asset Trader voice command functionality.

Once installed, you can access additional tools.

With User Settings, you display the User Settings window. You can use this to adjust **Pronunciation Sensitivity and Recognition Accuracy vs. Response Time** by clicking and dragging in the scales.

You can test your microphone and adapt the recognition system to your voice by clicking **Microphone Wizard.** This opens the Microsoft Microphone Wizard. You can follow the instructions in this wizard to test your microphone.

You can also click **Speaker Training** which opens the Microsoft Speaker Training Wizard.
In the Commands list, you edit the voice recognition menu options by selecting the folder and checking the options you want to use or unchecking them to disable them.

Before you begin to use voice commands, you'll want to test these commands and make sure that IronFX Multi-Asset Trader recognises your voice and pronunciation properly.

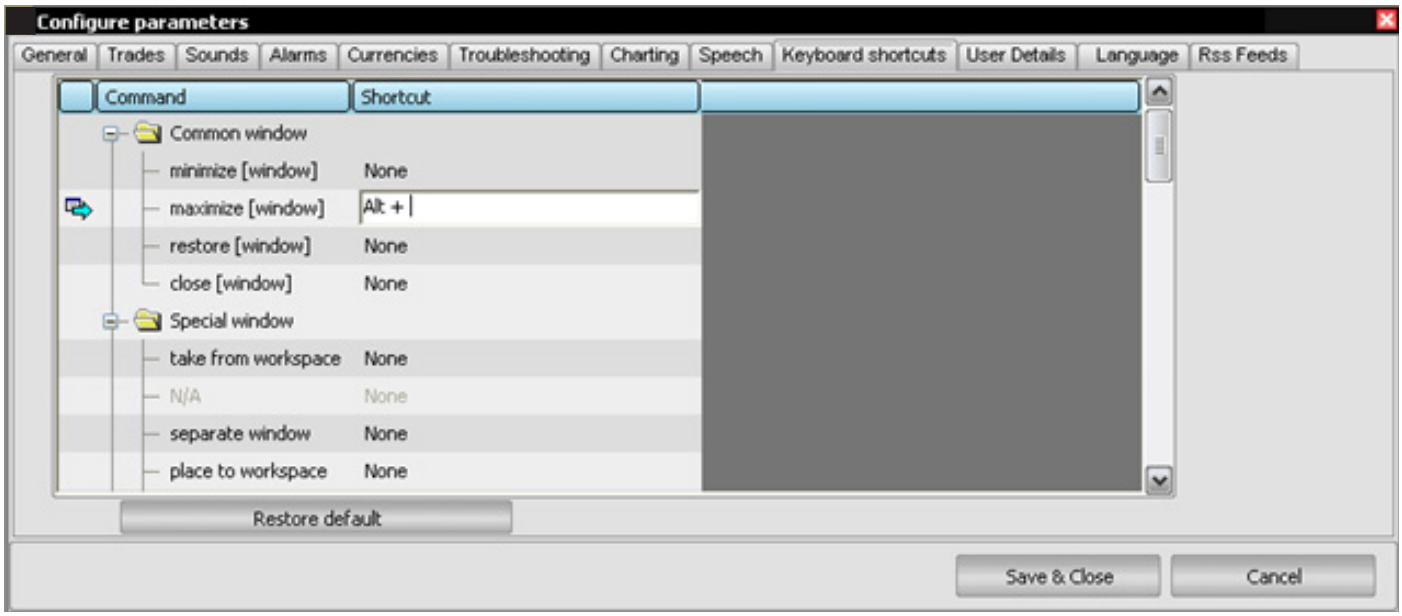
To do this, select the menu option you want and click the **Train Command**… button.

When the Train Voice Command window appears, click the **Start Training** button and say the command. If IronFX Multi-Asset Trader recognises your command, a Success message appears. If your command is not recognised, you will see a Failed message.

You may need to use the Start Training feature a few times, in order for IronFX Multi-Asset Trader to become accustomed to the sound of your voice.

SPECIFYING KEYBOARD SHORTCUTS IN IRONFX MULTI-ASSET TRADER

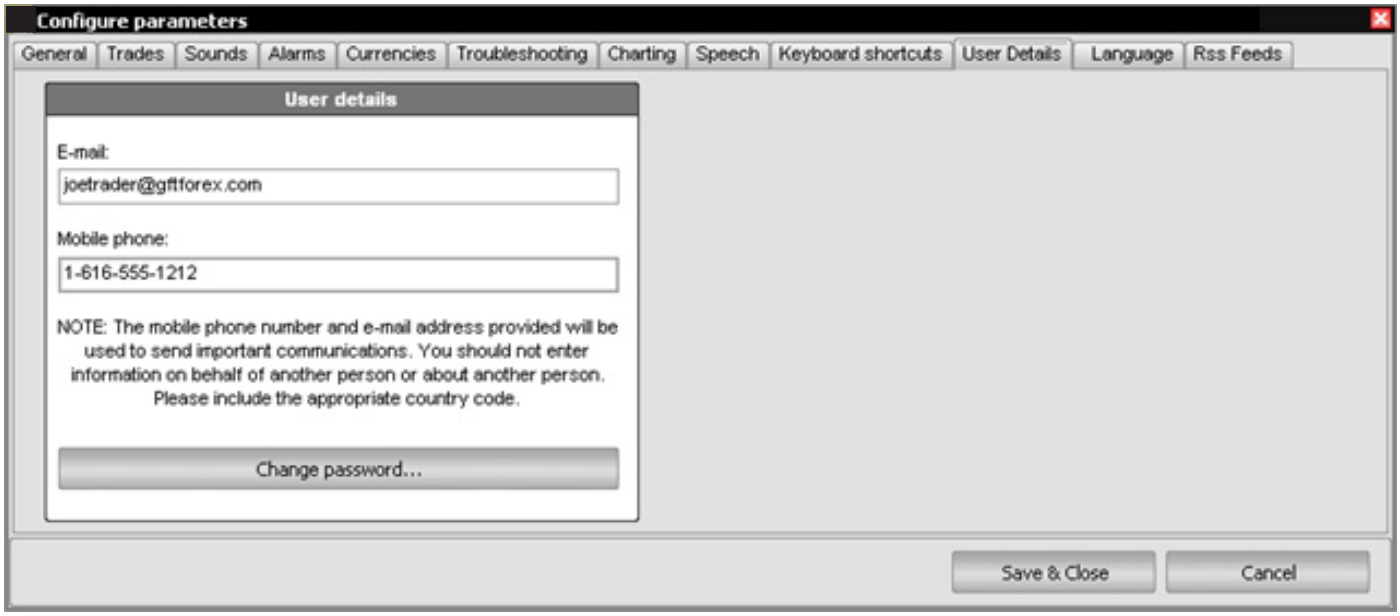
The Keyboard Shortcuts tab of the Configure Parameters window allows you to create and save keyboard shortcuts for commonly used menu options.



Click on the ⊞ next to the folder you want to display a list of menu options. The icon next to the folder changes to a ⊟. When the drop-down menu appears, you can select the menu option you want and enter a shortcut in the text box. To minimise the drop-down menu, click the ⊟.

ENTERING EMAIL AND PHONE NUMBERS IN THE USER DETAILS TAB

When you set alarms and specify to have notifications sent to your email or SMS, IronFX Multi-Asset Trader uses the information in the User Details tab of the Configure Parameters window.



When you enter your contact information in these fields, IronFX Multi-Asset Trader uses this information; changing this information does not update your information at IronFX.

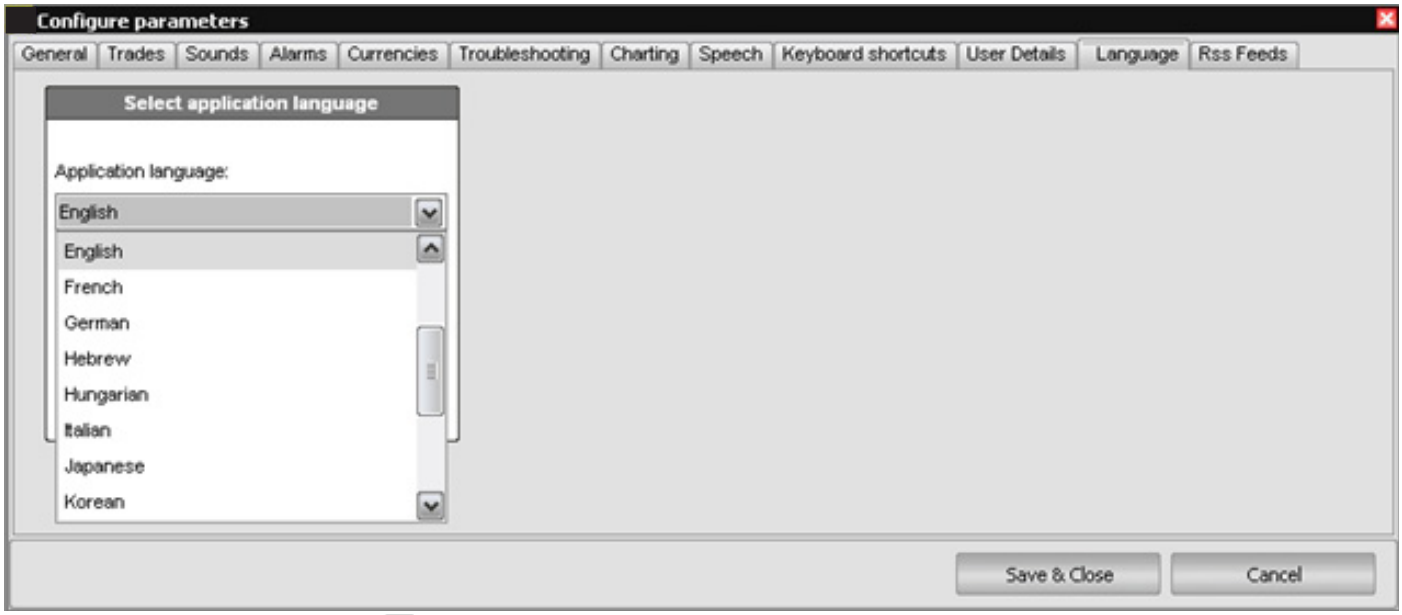
CHANGING YOUR LOGIN PASSWORD IN THE USER DETAILS TAB

You can change your IronFX Multi-Asset Trader password by clicking the **Change Password**… button in the User Details tab of the Configure Parameters window. This opens the Change Password window.

To change your password, you need to enter your old password, then type in your new password and click **OK**. Then, click the **Save & Close** button in the Configure Parameters window.

SPECIFYING THE APPLICATION LANGUAGE IN IRONFX MULTI-ASSET TRADER

You can select the language you want IronFX Multi-Asset Trader to be displayed in under the Language tab of the Configure Parameters window.

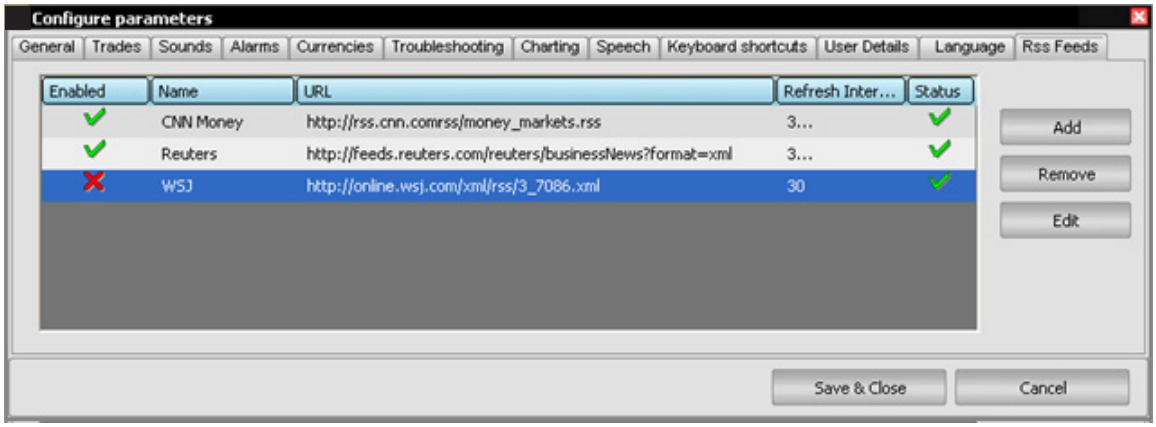


To select the language, click and select the language you want from the list.
After you click the **Save & Close** button in the Configure Parameters window, you will need to restart IronFX Multi-Asset Trader for this change to take effect. When you login, IronFX Multi-Asset Trader will display its windows in the language you specified.

If you select another language in Multi-Asset, the text in the Workspace buttons will remain the same, unless you rename them.

MANAGING NEWS FEEDS ON THE RSS FEEDS TAB

You can add and remove the News feeds that appear in the News window in the RSS Feeds tab of the Configure Parameters window.



ADDING AN RSS NEWS FEED:

1. In the Configure Parameters window, make sure RSS Feeds tab is selected.
2. Click **Add**. This opens the RSS Feeds window.

3. Enter the name and URL.
4. Check the **Enabled** box.
5. Set how often you want IronFX Multi-Asset Trader to check the feed in the Refresh Interval text box.
6. Click **OK**.
7. If done in the Configure Parameters window, click **Save & Close**.

You can edit the RSS feed by selecting one in the tab and click **Edit**. This opens the RSS Feeds window so you can edit the feed.

To remove an RSS feed, you can select one and click **Remove**.

USING THE TROUBLESHOOTING FEATURES WHEN TALKING TO SUPPORT

If you experience problems while working with IronFX Multi-Asset Trader, you can contact IRONFX's Technical Support, 24-hours a day.

You may also be asked to send logs to the Support Service. You can do this by clicking the **Send Logs**... menu option from the **Help** menu to display the Select Logs to Send window.

SENDING LOG INFORMATION:

1. Click the **Send Logs**... menu option from the **Help** menu.
2. Scroll down the list and select the log you want.
3. If desired, enter additional comments in the text box.
4. Click **Send**.
5. When logs are sent a corresponding message appears at the bottom of the window.

APPENDIX A: TROUBLESHOOTING

As you use IronFX Multi-Asset Trader, you may have some questions about the application. Some of our most frequently asked questions are below. If you don't see the information you're looking for, open Live Chat on the IRONFX website to text chat with a IRONFX specialist now.

I just installed IronFX Multi-Asset Trader and when I launched it to login, the Connection Options window appeared. What am I supposed to do?

You'll want to enter either the live system or demo system address in the URL text box in the Config Connection Parameters section:

Live system: http://live.mat.ironfx.com/naming.ior

Demo system: http://demo.mat.ironfx.com/naming.ior

When done, click OK to continue. IronFX Multi-Asset Trader will then display the Login window and you can continue to launch the application as normal.

Where do I get login and password information?

IRONFX sends login and password information when you open an account. If you don't have an account, you can sign up for a risk-free practice account by contacting IRONFX.

How do I get the layout file used in this guide?

If the layout file specified in Viewing the IronFX Multi-Asset Trader Workspace is not installed, open Live Chat to text chat with a IRONFX specialist. When you provide them with the name of the file, they can provide you with the file and the steps to import it into Multi-Asset.

I accidentally closed one of the three charts in my layout. How do I re-open it?

If you are using the layout file specified in Viewing the IronFX Multi-Asset Trader Workspace, the three charts that you see are linked charts. They're connected to the Quote Board and update when you select an instrument in the Quote Board.

If you close any of them, you can re-open it by right-clicking in the Quote Board on the instrument you want to view and selecting Open Linked Chart from the drop-down menu. You may need to adjust the chart type and time frame.

When I double-click on an instrument in the Quote Board, it doesn't display the Direct Deal ticket. Why is that?

IronFX Multi-Asset Trader will display the Direct Deal tickets if you are using layout file specified in Viewing the IronFX Multi-Asset Trader Workspace. When you double-click on the Quote Board, you can configure IronFX Multi-Asset Trader to do one of three actions: display a Direct Deal ticket for the selected instrument, open the Working Orders window or display a chart for that instrument.

You can customise the appearance of the Quote Board and the instruments that appear in it by right-clicking on it and selecting **Configure**… from the drop-down menu. This displays the Quote Board Options… window. On the General tab, you'll see the Symbol Click Action section. Here, you can choose to display Direct Deal tickets, the Working Orders window or a chart window when you click on an instrument row in the Quote Board.

For more information, see Configuring the Quote Board.

What's the difference between an open position and a working order?

When your order is filled, whether you have a market order or a stop or limit, it becomes an open position. Because it is currently being traded, you cannot change or delete your position. It appears in the Open Positions window and you can only close or reverse it, if desired.

When you create a stop or limit order and the market has not yet reached its price, your order is a working order. Because you are waiting for the market to trigger the order, you can modify or delete the order. This order appears in the Working Orders window.

What's the difference between a market order and a direct deal order?

A market order is a request to buy or sell an instrument at the current market price.

A direct deal order is a request to buy or sell an instrument at an exact price (if it is still available). You can usually place it with one click.

The biggest difference between these two order types is how they are filled. Even though IronFX Multi-Asset Trader fills all orders immediately, prices can jump or fall instantaneously in a volatile market. In this case, a market order will be filled at the closest available price. A direct deal order will only be filled if the price is still available when the order reaches the IronFX Multi-Asset Trader servers.

I have more than one account. Can I switch between accounts when I make a trade?

If you have more than one IronFX Multi-Asset Trader account, you can switch between accounts at any time using the **Account** drop-down menu in the New Order window.

If you switch between accounts while trading, however, make sure the right account is selected in the Account drop-down menu before you enter you trade. Your accounts use different settings for size or base currency. They may also be different account types (position-based or net-based). All of these factors may have an effect on the outcome of your trade.

When I open the Chart Type drop-down menu, I only see four options in the menu. Why is that?

Some of the options that you see in the **Chart Types** drop-down menu depend on the time selected in the **Time Frame** drop-down menu. For example, when Tick is selected in the Time Frame drop-down menu, the only chart types you can select are Line, PF, Kagi, and Three Line Break. If you change to another time frame, you'll see additional chart types.

Where can I learn more about a specific indicator?

You can learn more about the indicators that appear in IronFX Multi-Asset Trader on the Technical Indicators page on the IronFX website.
